As the actual Salesforce Certified MuleSoft Associate (Salesforce-MuleSoft-Associate) certification exam costs a high penny, PDF4Test provides a free demo before your purchase so you can be well aware of the Salesforce Salesforce-MuleSoft-Associate exam questions. The Salesforce Certified MuleSoft Associate (Salesforce-MuleSoft-Associate) exam dumps are instantly downloadable right after your purchase. In the same way, PDF4Test provides a money-back guarantee if in any case, you are unable to pass the Salesforce Salesforce-MuleSoft-Associate Certification but the terms and conditions are mentioned on the guarantee page.

It's known that there are numerous materials for the Salesforce-MuleSoft-Associate Exam, choose a good materials can help you pass the exam quickly. Our product for the Salesforce-MuleSoft-Associate exam also have materials, besides we have three versions of the practice materials. The PDF version can be printed into the paper version, and you can take some notes on it, and you can study it at anywhere and anytime, the PDF version also provide the free demo and you can practice it before buying. The online version uses the onlin tool, it support all web browers, and it's convenient and easy to learn it also provide the text history and performance review, this version is online and you can practice it in your free time. The desktop version stimulate the real exam environment, it will make the exam more easier.

Salesforce Salesforce-MuleSoft-Associate Valid Exam Guide & Salesforce-MuleSoft-Associate Examinations Actual Questions

It is not hard to know that Salesforce Certified MuleSoft Associate torrent prep is compiled by hundreds of industry experts based on the syllabus and development trends of industries that contain all the key points that may be involved in the examination. Therefore, with Salesforce-MuleSoft-Associate exam questions, you no longer need to purchase any other review materials, and you also don't need to spend a lot of money on tutoring classes. At the same time, Salesforce-MuleSoft-Associate Test Guide will provide you with very flexible learning time in order to help you pass the exam.

Salesforce Certified MuleSoft Associate Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which Anypoint Platform component should a MuleSoft developer use to create an API specification prior to building the API implementation?

- A. MUnit
- **B. API Designer**
- C. API Manager
- D. Runtime Manager

Answer: B

Explanation:

Creating an API specification before building the API implementation is a critical step in API development. MuleSoft's API Designer is the tool designed for this purpose. Here's a detailed explanation:

API Designer:

Purpose: API Designer is a web-based tool within Anypoint Platform that allows developers to design, document, and test APIs.

Features:

Specification Languages: Supports RAML and OAS (OpenAPI Specification) for defining APIs.

Interactive Editing: Provides a graphical and text-based interface to design API specifications interactively.

Mocking Service: Allows developers to create mock services to simulate API behavior before the actual implementation.

Process:

Define API: Use API Designer to create a detailed API specification, including endpoints, methods, request/response schemas, and security schemes.

Documentation: Automatically generate API documentation that can be shared with stakeholders.

Testing: Test the API design using the built-in mocking service to ensure it meets requirements.

NEW QUESTION # 23

According to MuleSoft which principle is common to both Service Oriented Architecture (SOA) and API-led connectivity approaches*?

- A. Service interdependence
- B. Service statefulness
- **C. Service reusability**
- D. Service centralization

Answer: C

Explanation:

Both Service-Oriented Architecture (SOA) and API-led connectivity emphasize the principle of service reusability. Here's a detailed explanation:

Service Reusability:

Definition: Service reusability is the principle where services are designed to be reusable across different applications and use cases.

SOA: In SOA, services are modular components that can be reused in various business processes, reducing redundancy and

promoting efficient service composition.

API-led Connectivity: This approach also stresses creating reusable APIs (System APIs, Process APIs, Experience APIs) that can be leveraged across multiple projects and applications.

Benefits:

Efficiency: Reduces development time and effort by reusing existing services.

Consistency: Ensures consistency in business logic and data access across different applications.

Scalability: Facilitates scaling by using standardized and reusable services/APIs.

NEW QUESTION # 24

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load. Which scalability option is the controller implementing?

- A. Down
- B. Diagonal
- C. Horizontal
- D. Vertical

Answer: C

Explanation:

Kubernetes offers several scalability options to handle varying application loads. The scenario described involves adding another pod replica in response to increased load, which is a form of horizontal scaling. Here's a detailed explanation:

Horizontal Scaling:

Definition: Horizontal scaling, also known as scaling out, involves adding more instances (pods) to distribute the load and increase capacity.

Implementation in Kubernetes: Kubernetes uses controllers like the Horizontal Pod Autoscaler (HPA) to automatically adjust the number of pod replicas based on observed CPU utilization or other select metrics.

Benefits:

Load Distribution: By adding more pod replicas, the load is evenly distributed, reducing the risk of any single pod being overwhelmed.

Fault Tolerance: Horizontal scaling enhances fault tolerance and availability, as multiple pod replicas can handle requests if one fails.

Automatic Scaling:

Kubernetes Controller: The HPA continuously monitors the application load and adjusts the number of pod replicas accordingly, ensuring optimal performance.

NEW QUESTION # 25

CloudHub is an example of which cloud computing service model?

- A. Monitoring as a Service (MaaS)
- B. Platform as a Service (PaaS)
- C. Software as a Service (SaaS)
- D. Infrastructure as a Service (IaaS)

Answer: B

Explanation:

CloudHub is MuleSoft's integration platform as a service (iPaaS) offering. It provides a platform for deploying and managing integration applications in the cloud. Here's a detailed explanation:

Platform as a Service (PaaS):

Definition: PaaS provides a cloud-based environment with everything required to support the complete lifecycle of building and deploying web applications and services without the complexity of managing the underlying hardware and software layers.

CloudHub Features:

Deployment: Simplifies the deployment of Mule applications to the cloud.

Management: Provides tools for managing application performance, scaling, and monitoring.

Connectivity: Offers out-of-the-box connectors and integration capabilities for various systems and services.

Benefits:

Scalability: Automatically scales applications based on demand.

Availability: Ensures high availability and reliability with built-in disaster recovery and failover capabilities.

Security: Provides robust security features to protect data and applications.

NEW QUESTION # 26

An organization is choosing between API-led connectivity and other integration approaches According to MuleSoft which business benefit is associated with an API-led connectivity approach using Anypoint Platform?

- A. Improved security through adoption of monolithic architectures
- B. Greater project predictability through tight coupling of systems
- C. Increased developer productivity through self-service of API assets
- D. Higher outcome repeatability through centralized development

Answer: C

Explanation:

API-led connectivity is an approach that emphasizes the reuse of APIs to enhance agility and productivity. Here's a detailed explanation of the associated business benefits:

Self-Service of API Assets:

Definition: API-led connectivity enables developers to discover, access, and use APIs through a centralized platform like Anypoint Exchange, promoting self-service.

Productivity: Developers can quickly find and integrate existing APIs, reducing the time and effort required to build new functionalities from scratch.

Business Benefits:

Reusability: Encourages the reuse of APIs across projects, leading to faster development cycles and reduced duplication of efforts.

Agility: Enhances the ability to respond to changing business needs by providing a flexible and modular integration framework.

Scalability: Facilitates the scaling of integration solutions as business requirements grow.

API-led Connectivity: MuleSoft API-led Connectivity

Business Benefits: Why API-led Connectivity?
