## 完璧なC\_S43合格内容 & 合格スムーズC\_S43全真問題集 | 更新するC\_S43受験記対策

CertShikenは、お客様に学習のためのさまざまな種類のC\_S43練習トレントを提供し、知識を蓄積し、試験に合格し、期待されるスコアを取得する能力を高めるための信頼できる学習プラットフォームです。C\_S43スタディガイドには、オンラインでPDF、ソフトウェア、APPの3つの異なるバージョンがあります。顧客の信頼を確立し、間違った試験問題を選択することによる損失を避けるために、購入前にダウンロードできるC\_S43試験問題の関連する無料デモを提供しています。

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) 認定 C\_S43 試験問題 (Q10-Q15):

### 質問 # 10

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Initiate and screen a Maintenance Notification
- \* Plan Maintenance Order and send it for approval

\* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

- \* Screen and accept the just created Maintenance Notification.
- \* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

**正解:**

**解説:**

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

- \* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .
- \* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request ).
- \* Enter the Following Data :
- \* Technical Object : T-PB48
- \* Description : Defective pump (phase-based)
- \* Current Location : Production Line 1
- \* Detection Method : Continuous Condition Monitoring
- \* Operational Effect : Production restricted
- \* Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

- \* Access the Fiori App : Open Screen Maintenance Requests .
- \* Locate Your Notification : Find the notification you just created for T-PB48.
- \* Perform Screening :
- \* Review the details to ensure they are complete.
- \* Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

- \* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .
- \* Enter Planning Data :
- \* Technical Object : T-PB48
- \* Operation 0010 Description : Repair damage
- \* Operation 0010 Work : 2 h
- \* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is "Waiting for Approval"

## 質問 # 11

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Create a Task List header
- \* Create Task List operations
- \* Create a Task List with 3 Task List operations. Maintenance Strategy Z### comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

□ Use the following information for each Task List operation:

□

- \* Assign Maintenance Packages to the Task List Operations as follows:
- \* Operation 10 is to be performed monthly.
- \* Operation 20 is to be performed every 4 months.
- \* Operation 30 is to be performed every 12 months.

正解:

解説:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- \* Transaction : IP11 (Maintain Maintenance Strategies).
- \* Action : Click New Entries .
- \* Strategy : Z48
- \* Description : Strategy for Group 48
- \* Strategy Unit : MON (Months).
- \* Packages : On the left, double-click Packages , then click New Entries :
- \* Line 1 : Cycle 1 / Unit MON / Text Monthly
- \* Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- \* Line 3 : Cycle 12 / Unit MON / Text Yearly
- \* Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

- \* Transaction : IA05 .
- \* Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- \* Header Fields :
- \* Description : Regular Maintenance GR48
- \* Planning Plant : 1010
- \* Work Center : MK-00 / Plant : 1010
- \* Usage : 4 (Plant Maintenance)
- \* Status : 4 (Released)
- \* Planner Group : P48
- \* Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

- \* Click the Operations button (F6) at the top.
- \* Enter three rows with this data:
- \* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
- \* Op 20 : (Same as above).
- \* Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

- \* Select Row 10 (click the box at the far left of the row).
- \* Go to Menu: Goto > Maintenance Packages .
- \* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.
- \* Select Row 20 .
- \* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .
- \* Select Row 30 .
- \* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

- \* Click the Save icon.
- \* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

## 質問 # 12

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

- \* Create a Maintenance Work Center
- \* Create a capacity demand for a Maintenance Work Center
- \* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:
  - \* Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

## 正解:

### 解説:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- \* create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- \* maintain the required capacity values
- \* create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□ Part 1: Create the Maintenance Work Center  
Requirement from task file

The task required the following values for the work center:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Description = Mechanical Maintenance 42
- \* No. Ind. Capacities = 5
- \* Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□ Step-by-step procedure

Step 1: Open work center creation

- \* Go to SAP GUI command field
- \* Enter transaction IR01
- \* Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- \* Plant = 1010
- \* Work Center = ZZ-ME42
- \* Work Center Category = 0005
- \* In Copy from :
- \* Plant = 1010
- \* Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- \* select Capacities
- \* continue with the green check

This was important because the task required changing capacity-related data:

- \* No. Ind. Capacities = 5

\* Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

Step 4: Maintain basic data

On the work center master screen:

\* change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

\* No. Ind. Capacities = 5

\* Capacity Base Unit = H

\* Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

\* Start Time = 08:00:00

\* End Time = 17:00:00

\* Length of breaks = 01:00:00

\* Capacity Utilization = 60

\* No. Ind. Capacities = 5

This produced:

\* Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

\* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

\* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

\* create a capacity demand of 1 hour

\* for the newly created maintenance work center ZZ-ME42

\* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

\* In the command field, enter /nIW31

\* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen, enter:

\* Order Type = PM01

\* Planning Plant = 1010

Then press Enter.

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01.

Step 9: Enter order description

On the order header screen, enter a short text such as:

\* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

\* Operation = 0010

\* Work Center = ZZ-ME42

\* Plant = 1010

\* Control Key = PM01

\* Work Duration / Work = 1

\* Unit = H

Then press Enter .

This operation is the actual source of the capacity demand .

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

\* Click Save

SAP displayed the confirmation message:

\* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

\* Maintenance Work Center created

\* Work Center = ZZ-ME42

\* Plant = 1010

\* confirmed by SAP message that the work center already existed when rechecked

\* Capacity maintained correctly

\* No. Ind. Capacities = 5

\* Capacity = 24.00 H

\* Capacity demand created

\* maintenance order type PM01

\* operation assigned to ZZ-ME42

\* planned work = 1 H

\* Order successfully saved

\* SAP confirmation: Order saved with number 4000314

### 質問 # 13

In the following assessment you will slip into the role of a consultant implementing SAP S/4HANA Asset Management OnPrem/Private Cloud for Machine Manufacturing Inc. . You need to fulfill various system tasks to setup certain business processes and test them.

Note:

In the task descriptions is no information provided if and/or how Asset Management specific customizing settings need to be adapted. This is an implicit part of the exam.

Note:

There is no information provided which UI to use when creating the data in the system e.g. SAP GUI, SAP Fiori Launchpad. This is an implicit part of the exam.

Your performance in each exercise will be evaluated to produce an overall score that determines a pass or fail for the exam. Please read every exercise carefully and enter any data exactly as requested without alteration. Some input data is provided in tables or in the task descriptions, however your input data is not limited to these parameters.

Use the following Logon information for all tasks:

Caution:

Please make sure you are always using your assigned group number (denoted as ## in the following) .

Your results will not be recorded if you are not using your own group number.

For example, if your group number is 10 i.e. (## = 10), your user will be S43900-10.

To find your group number: Click the Access button on the practice system details page. You will find your group number displayed beneath the "Get started" header in the pop-up window. Alternatively, in your Windows Terminal Server, choose the Windows button in the lower left corner. The Start Menu opens. In its upper left corner, choose the Expand icon (three white lines). Find your user name next to the user icon on the left side of the menu - the last two digits of the user name are your group number ##.

Note:

To access your backend system in the Windows Terminal Server, open the SAP Logon application and start the T41 system (Client 400 ). You can access the SAP Fiori Launchpad from the SAP Menu in T41. Always work with user S43900-## in order to have the required roles in place for your tasks.

Caution:

To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and stay within your allocated resources to help maintain a stable and

efficient environment for everyone and to ensure your data is evaluated properly.

Note:

In the following, you will be asked to create new transaction data, among others. If you are asked to create one specific new transaction data object, and - for whatever reason - you create more than one of that kind, SAP will evaluate your newest version only. For example: if you are asked to create a Maintenance Order of a specific Order Type in an exercise and you create three different Maintenance Orders of a specific Order Type, only your order with the highest order number will be evaluated.

**正解:**

**解説:**

See the Explanation for complete Solution of this Task.

Explanation:

Task Objective

In this assessment, you assume the role of a consultant implementing SAP S/4HANA Asset Management for Machine Manufacturing Inc. . Your goal is to set up and test specific business processes through various system tasks.

Step 1: Identify Your Assigned Group Number (###)

This is the most critical step, as your results will only be recorded if you use your specific group number, denoted as ## in all instructions.

How to find your number:

\* Method A: Click the Access button on the practice system details page; your group number is displayed beneath the "Get started" header.

\* Method B: In the Windows Terminal Server, click the Windows button (Start Menu), select the Expand icon (three white lines), and find your user name next to the user icon. The last two digits of that name are your group number.

Step 2: Access the System

You must use the specific credentials provided to ensure you have the required roles for the assessment.

Logon Credentials:

\* System : T41

\* Client : 400

\* User Name/ID : S43900-## (e.g., if your group number is 10, use S43900-10)

\* Password : Welcome1

Connection Methods:

\* SAP GUI : Open the SAP Logon application in the Windows Terminal Server and start the T41 system (Client 400).

\* SAP Fiori Launchpad : This can be accessed directly from the SAP Menu within the T41 system.

Step 3: Understand Implicit Exam Rules

The assessment does not provide exhaustive instructions; certain technical decisions are considered part of the exam.

\* Customizing : You must determine if and how specific Asset Management customizing settings need to be adapted.

\* User Interface : You are free to choose between the SAP GUI or SAP Fiori Launchpad to create data, as the instructions do not specify which to use.

\* Data Accuracy : Enter all data exactly as requested in the tables or descriptions without any alterations.

Step 4: Evaluation of Transaction Data

If you are asked to create a specific transaction object (like a Maintenance Order) and you create multiple versions, the system will only evaluate the newest version (the one with the highest identifying number).

Caution : To ensure your data is evaluated properly and to maintain system stability, stay strictly within the scope of the assigned exercises and your allocated resources.

□

## 質問 # 14

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

\* Configure and create Functional Locations

\* Create, serialize and install Equipment

\* Create Functional Location master record ZZ0##-01 and save it. Use the following information:

□ \* Create Equipment master record EQUI-## and save it. Use the following information:

□ \* Serialize the just created Equipment master record EQUI-## . Use the following data:

□ \* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

**正解:**

**解説:**

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

\* Access the Transaction : Use transaction code IL01 (Create Functional Location).

\* Enter Initial Data :

\* Functional Location : ZZ048-01.

\* Structure Indicator : ZZ48.

\* Functional Location Category : T.

\* Press Enter .

□ \* Enter General Data :

\* Description : Production Line Z48.

\* Enter Location and Organization Data :

\* Maintenance Plant : 1020.

\* Cost Center : 4110.

\* Planning Plant : 1020.

\* Planner Group : Z48.

\* Main WorkCtr : T-ME48.

\* Work Center Plant : 1010.

\* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

□ Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

\* Access the Transaction : Use transaction code IE01 (Create Equipment).

\* Enter Initial Data :

\* Equipment : EQUI-48.

\* Equipment Category : T.

\* Press Enter .

□ \* Enter General Data :

\* Description : Drive Motor GR48.

\* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

□ Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

\* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.

\* Navigate to Serial Data : Go to the SerData (Serial Data) tab.

\* Enter Serialization Data :

\* Material : T-PM8000.

\* Serial Number : EQUI-48.

\* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

□ Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

\* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

\* Modify Installation Location :

\* Click on the Structure tab.

\* Find the FunctLoc field.

\* Enter the location: 00-01-ASS-02.

\* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

## 質問 #15
