Microsoft AZ-800模擬試験サンプル、AZ-800最新知識

長年の訂正と修正を受けて、AZ-800試験問題はすでに完璧になっています。彼らは、エラーのない有望な練習資料です。当社はまた、顧客第一です。そのため、まずあなたの興味のある事実を考慮します。お客様のニーズに基づいたすべての先入観とこれらすべてが、満足のいく快適な購入サービスを提供するための当社の信念を説明しています。AZ-800をシミュレートする実践がすべての責任を負い、予測可能な結果をもたらす可能性があり、私たちを確実に信じることを後悔することはありません。

Microsoft AZ-800 認定試験は、Azure Arc-enabled サーバーの実装と管理、Azure Stack HCI の展開、Azure Stack Edge の管理など、幅広いトピックをカバーしています。また、Azure Active Directoryを使用したハイブリッド ID ソリューションの実装、ハイブリッドバックアップと災害復旧ソリューションの管理もカバーしています。

Microsoft Administering Windows Server Hybrid Core Infrastructure 認定

AZ-800 試験問題 (Q206-Q211):

質問 # 206

SIMULATION

Task 3

You need to configure SRV1 as a DNS server. SRV1 must be able resolve names from the contoso.com domain by using DC1. All other names must be resolved by using the root hint servers.

正解:

解説:

See the solution of this Task below

Explanation:

One possible solution to configure SRV1 as a DNS server that can resolve names from the contoso.com domain by using DC1 and all other names by using the root hint servers is to use conditional forwarding. Conditional forwarding allows a DNS server to forward queries for a specific domain name to another DNS server, while using the normal forwarding or root hint servers for other queries. Here are the steps to configure conditional forwarding on SRV1:

On SRV1, open DNS Manager from the Administrative Tools menu or by typing dnsmgmt.msc in the Run box.

In the left pane, right-click on Conditional Forwarders and select New Conditional Forwarder.

In the New Conditional Forwarder dialog box, enter contoso.com as the DNS Domain name.

In the IP addresses of the master servers box, enter the IP address of DC1, which is the DNS server for the contoso.com domain.

You can also click on Resolve to verify the name resolution of DC1.

Optionally, you can check the box Store this conditional forwarder in Active Directory, and replicate it as follows if you want to store and replicate the conditional forwarder in AD DS. You can also select the replication scope from the drop-down list.

Click OK to create the conditional forwarder.

Now, SRV1 will forward any queries for the contoso.com domain to DC1, and use the root hint servers for any other queries. You can test the name resolution by using the nslookup command on SRV1 or another computer that uses SRV1 as its DNS server. For example, you can run the following commands:

```
nslookup www.contoso.com
```

```
nslookup www.microsoft.com
```

The first command should return the IP address of www.contoso.com from DC1, and the second command should return the IP address of www.microsoft.com from a root hint server.

質問 # 207

Your network contains an Active Directory Domain Services (AD DS) domain named contoso.com. The domain contains the VPN servers shown in the following table.

☐ You have a server named NPS1 that has Network Policy Server (NPS) installed. NPS1 has the following RADIUS clients:

☐ VPN1, VPN2, and VPN3 use NPS1 for RADIUS authentication. All the users in contoso.com are allowed to establish VPN connections. For each of the following statements, select Yes If the statement is true.

☐ Otherwise, select No. NOTE: Each correct selection is worth one point.

正解:

解説:

☐ Explanation:

質問 # 208

You need to meet the technical requirements for VM2.

What should you do?

- ☐ A. Implement Credential Guard.
- ☒ B. Enable enhanced session mode.
- ☐ C. Enable the Guest services integration service.
- ☐ D. Implement shielded virtual machines.

正解: B

解説:

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements, if the case study has an All Information tab. Note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Fabrikam, Inc. is a manufacturing company that has a main office in New York and a branch office in Seattle.

On-premises Servers

The on-premises network contains servers that run Windows Server as shown in the following table.

DC1 hosts all the operation master roles.

WEB1 and WEB2 run an Internet Information Services (IIS) web app named Webapp1.

On-premises Network

The New York and Seattle offices are connected by using redundant WAN links.

The client computers in each office get IP addresses from their local DHCP server.

DHCP1 contains a scope named Scope1 that has addresses for the New York office. DHCP2 contains a scope named Scope2 that has addresses for the Seattle office.

Group Policy Object (GPOs)

The cwp.fabrikam.com domain contains the organizational units (OUs) and custom Group Policy Objects (GPOs) shown in the following table.

質問 # 209

You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed.

You need to limit which Hyper-V module cmdlets helpdesk users can use when administering Server 1 remotely.

You configure Just Enough Administration (JEA) and successfully build the role capabilities and session configuration files.

How should you complete the PowerShell command? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation:

In Just Enough Administration (JEA), you restrict what remote users can do by publishing a PowerShell session endpoint that references a session configuration file and one or more role capability files. The AZ-

800 "Administering Windows Server Hybrid Core Infrastructure" materials explain that a JEA deployment follows this order: (1) create role capability files (.psrc) in a module's RoleCapabilities folder to enumerate allowed cmdlets, functions, and parameters; (2) author a session configuration file (.pssc)-typically with New-PSSessionConfigurationFile-that maps users or groups to the role capabilities; and (3) register the endpoint with Register-PSSessionConfiguration, supplying the .pssc path and a Name for the endpoint. Only after registration can helpdesk users connect to the constrained endpoint.

Critically, among the listed cmdlets, Register-PSSessionConfiguration is the one that accepts -Name and -Path to a .pssc file, which matches the prompt (-Path .\hypervJeaConfig __ -Name 'hypervJeaHelpDesk' -Force). Enter-PSSession is for connecting to an already published endpoint, and New-PSSessionConfigurationFile creates the .pssc but does not publish it. Likewise, file types .ps1 (script), .psml (module), and .psrc (role capability) are not valid for the -Path parameter when registering an endpoint.

Therefore, the correct completion is:

Register-PSSessionConfiguration -Path .\hypervJeaConfig.pssc -Name 'hypervJeaHelpDesk' -Force.

質問 # 210

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains the domain controllers shown in the following table.

You need to ensure that if an attacker compromises the computer account of RODC1, the attacker cannot view the Employee-Number AD DS attribute. Which partition should you modify?

- A. domain
- B. configuration
- C. global catalog
- **D. schema**

正解: D
