2025 Latest NewPassLeader CISSP PDF Dumps and CISSP Exam Engine Free Share: [https://drive.google.com/open?id=1Q33R-iTbmywbjGzcv8\\_EZRGRu6a9gn64](https://drive.google.com/open?id=1Q33R-iTbmywbjGzcv8_EZRGRu6a9gn64)

Some practice materials keep droning on the useless points of knowledge. In contrast, being venerated for high quality and accuracy rate, our CISSP training quiz received high reputation for their efficiency and accuracy rate originating from your interests, and the whole review process may be cushier than you have imagined before. Numerous of our loyal customers wrote to us to praise that the CISSP Exam Questions are the same with the real exam questions and they passed CISSP exam with ease.

ISC CISSP (Certified Information Systems Security Professional) Certification Exam is a globally recognized certification that validates the knowledge and expertise of information security professionals. Certified Information Systems Security Professional (CISSP) certification is designed to test the skills required to design, implement, manage, and maintain a secure business environment. CISSP Exam is based on a comprehensive Common Body of Knowledge (CBK) that covers various domains related to information security, including security and risk management, asset security, security engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security.

## Updated CISSP Test Cram & Valid Exam CISSP Braindumps

NewPassLeader has hired a team of experts who keeps an eye on the Certified Information Systems Security Professional (CISSP) real exam content and updates our CISSP study material according to new changes on daily basis. Moreover, you will receive free Certified Information Systems Security Professional (CISSP) exam questions updates if there are any updates in the content of the Certified Information Systems Security Professional (CISSP) test. These updates will be given within up to 1 year of your purchase. The 24/7 support system has been made for your assistance to solve your technical problems while using our product. Don't wait anymore. Buy real Certified Information Systems Security Professional (CISSP) questions and start preparation for the CISSP test today!

## ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q162-Q167):

### NEW QUESTION # 162

Which of the following is a characteristic of the independent testing of a program?

- A. Independent testing increases the likelihood that a test will expose the effect of a hidden feature.
- B. Independent testing teams help decrease the cost of creating test data and system design specification.
- C. Independent testing teams help identify functional requirements and Service Level Agreements (SLA)
- D. Independent testing decreases the likelihood that a test will expose the effect of a hidden feature.

Answer: A

### NEW QUESTION # 163

Which statement below is accurate about Evaluation Assurance Levels (EALs) in the Common Criteria (CC)?

- A. A security level equal to the security level of the objects to which the subject has both read and write access
- B. Requirements that specify the security behavior of an IT product or system
- C. A statement of intent to counter specified threats
- **D. Predefined packages of assurance components that make up security confidence rating scale**

**Answer: D**

Explanation:

An Evaluation Assurance Level (EAL) is one of seven increasingly rigorous packages of assurance requirements from CC Part 3. Each numbered package represents a point on the CCs predefined assurance scale. An EAL can be considered a level of confidence in the security functions of an IT product or system. The EALs have been developed with the goal of preserving the concepts of assurance drawn from the source criteria, such as the Trusted Computer System Evaluation Criteria (TCSEC), Information Technology Security Evaluation Criteria (ITSEC), or Canadian Trusted Computer Evaluation Criteria (CTCPEC), so that results of previous evaluations remain relevant. EAL levels 2-7 are generally equivalent to the assurance portions of the TCSEC C2-A1 scale, although exact TCSEC mappings do not exist. \*Answer "A security level equal to the security level of the objects to which the subject has both read and write access" is the definition of Subject Security Level. A subject's security level is equal to the security level of the objects to which it has both read and write access. A subject's security level must always be dominated by the clearance of the user with which the subject is associated.

\* Answer "A statement of intent to counter specified threats" describes a Security Objective, which is a statement of intent to counter specified threats and/or satisfy specified organizational security policies and assumptions. \*Answer "Requirements that specify the security behavior of an IT product or system" describes Security Functional Requirements. These are requirements, preferably from CC Part 2, that when taken together specify the security behavior of an IT product or system. Source: CC Project and DoD 5200.28-STD.

### NEW QUESTION # 164

What can be defined as a list of subjects along with their access rights that are authorized to access a specific object?

- A. A role-based matrix
- B. A capability table
- **C. An access control list**
- D. An access control matrix

**Answer: C**

Explanation:

"It [ACL] specifies a list of users [subjects] who are allowed access to each object" CBK, p. 188

A capability table is incorrect. "Capability tables are used to track, manage and apply controls based on the object and rights, or capabilities of a subject. For example, a table identifies the object, specifies access rights allowed for a subject, and permits access based on the user's possession of a capability (or ticket) for the object." CBK, pp. 191-192 The distinction that makes this an incorrect choice is that access is based on possession of a capability by the subject.

To put it another way, as noted in AIO3 on p. 169, "A capability table is different from an ACL because the subject is bound to the capability table, whereas the object is bound to the ACL."

An access control matrix is incorrect. The access control matrix is a way of describing the rules for an access control strategy. The matrix lists the users, groups and roles down the left side and the resources and functions across the top. The cells of the matrix can either indicate that access is allowed or indicate the type of access. CBK pp 317 - 318

AIO3, p. 169 describes it as a table of subjects and objects specifying the access rights a certain subject possesses pertaining to specific objects.

In either case, the matrix is a way of analyzing the access control needed by a population of subjects to a population of objects. This access control can be applied using rules, ACL's, capability tables, etc.

A role-based matrix is incorrect. Again, a matrix of roles vs objects could be used as a tool for thinking about the access control to be applied to a set of objects. The results of the analysis could then be implemented using RBAC.

CBK, Domain 2: Access Control.

**NEW QUESTION # 165**

An organization wants to implement a security service that allows users to seamlessly move between organizational services. The organization wants to ensure that the solution does not create an enormous amount of over head for the Information Technology (IT) administrators while also protecting the organization from securely breaches. What type of solution should the organization implement?

- A. Software as a Service (SaaS)
- B. Public-key Infrastructure (PKI)
- C. Single Sign-n (SS)
- D. Infrastructure as a Service (IaaS)

**Answer: C**

**NEW QUESTION # 166**

Which methodology is recommended for penetration testing to be effective in the development phase of the life-cycle process?

- A. Black-box testing
- B. White-box testing
- C. Software fuzz testing
- D. Visual testing

**Answer: B**

Explanation:

White-box testing is recommended during the development phase as it involves the examination of the application's source code and design documents to identify vulnerabilities, ensuring that security is integrated into the development lifecycle.
