## New Adobe AD0-E725 Test Review & AD0-E725 Exam Syllabus

When it comes to AD0-E725 exam, many candidates are lack of confidence to pass it. But we all know self-confidence is the spiritual pillar of a person as well as the inherent power, which is of great importance and value to a person who want to pass the AD0-E725 exam. Our material include free Demo, you can go for free it of the AD0-E725 Materials and make sure that the quality of our questions and answers serve you the best. You are not required to pay any amount or getting registered with us for downloading free AD0-E725 materials. You can improve your confidence in the exam by learning about real exams through our free demo.

### Adobe AD0-E725 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>Section 1: Architecture: This section of the exam measures the skills of Backend Developers and covers the core structural concepts of Adobe Commerce. It involves demonstrating effective cache implementation, understanding key code components like plugins and observers, and managing multi-site configurations on a single instance. The domain also includes explaining the use of Git patches, critical security features, the CRON scheduling system, and how indexing functions within the platform.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Customizations: This section of the exam measures the skills of Solutions Engineers and involves modifying and extending platform functionality. This includes customizing core areas like the product catalog, checkout process, and admin panel, as well as manipulating data entities, customizing APIs, working with message queues, and writing integration tests to ensure code quality and functionality.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>External Integrations: This section of the exam measures the skills of Integration Specialists and focuses on connecting Adobe Commerce with external SaaS services. It encompasses the skills needed to customize data flows, utilize Adobe App Builder for extensibility, and implement Adobe I</li> <li>O events and webhooks to create automated and connected business processes.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Cloud: This section of the exam measures the skills of Cloud Architects and covers the deployment and management of Adobe Commerce on cloud infrastructure. It requires explaining the fundamental cloud architecture, performing setup and configuration tasks, and utilizing the Adobe Commerce Cloud CLI tool to manage the environment effectively.</li> </ul>

## Adobe Commerce Developer Expert Sample Questions (Q42-Q47):

### NEW QUESTION # 42

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Prevent users from accessing certain areas of the website based on their IP address.
- B. Restrict which resources (scripts, styles, images) are allowed to load on the website.
- C. Ensure that all user input is sanitized before being processed by the application.

**Answer: B**

### NEW QUESTION # 43

An Adobe Commerce Expert is tasked with implementing a custom condition on salable quantity with reservations. The condition needs to be applicable only when added to cart.

Which option should the Developer implement?

- A. `<virtualType name="IsProductSalableForRequestedQtyConditionChainOnAddToCart">  
<arguments>  
<argument name="conditions" xsi:type="array">  
<item name="is_salable_with_reservations" xsi:type="array">  
<item name="object" xsi:type="object"  
>Vendor/InventorySales/Model/ProductSalableForRequestedQtyCondition/IsSalableWithReservationsC  
/item>  
</item>  
</argument>  
</arguments>  
</virtualType>`
- B. `<preference for="Magento/InventorySales/Model/ProductSalableForRequestedQtyCondition/IsSalableWithReservationsC type="Vendor/InventorySales/Model/ProductSalableForRequestedQtyCondition/IsSalableWithReservationsCo />`
- C. `<type name="Magento/InventoryApi/Model/Stock/ValidatorChain">  
<arguments>`

```

<argument name="validators" xsi:type="array">
  <item name="is_salable_with_reservations" xsi:type="object"
  >Vendor\InventorySales\Model\Stock\Validator\IsSalableWithReservationsValidator</item>
</argument>
</arguments>
</type>

```

**Answer: A**

Explanation:

To add a custom salable quantity condition for use only during the add-to-cart flow, developers must extend the `IsProductSalableForRequestedQtyConditionChainOnAddToCart` virtual type. This chain is designed specifically for cart validation, ensuring the new condition runs only at that stage.

A would override the core class completely, not scoped to add-to-cart.

B relates to stock validator chains, not salable quantity conditions.

C is correct: defining a virtual type extension ensures proper conditional logic for reservations during cart validation.

Adobe Commerce DevDocs - MSI salable quantity conditions

#### NEW QUESTION # 44

A customer asks for a new functionality which will allow them to see the total lifetime sales statistic of a product. This new data is to be made available for the API and traditional product exports. The technical architect of the company servicing the client decides that for this to be achieved, the first step is for an Extension Attribute to be created.

What are the next two steps that need to be taken? (Choose two.)

- A. Declare the extension attribute in `etc/extension_attributes.xml`.
- B. Implement an around plugin on the Product Repository.
- C. Declare the extension attribute in `etc/webapi_rest/extension_attributes.xml`.
- D. Implement an after plugin on the Product Repository.

**Answer: A,D**

Explanation:

To expose a new field via an Extension Attribute:

C # Declare the extension attribute in `etc/extension_attributes.xml`.

D # Implement an after plugin on the Product Repository to populate the new attribute with custom logic (in this case, lifetime sales).

A is incorrect: `etc/webapi_rest/extension_attributes.xml` does not exist (only `extension_attributes.xml` is valid).

B is incorrect: around plugins are discouraged here and unnecessarily complicate service contract extensions.

Reference:

Adobe Commerce DevDocs - Extension attributes

#### NEW QUESTION # 45

A Developer needs to subscribe to the `customer_register_success` event.

How should the observer be declared in the module?

- A. Declare in `etc/events.xml`:
 

```

<observer name="customer_register_success">
  <event name="vendor_module_customer_register_observer" instance="
  Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>

```
- B. Declare in `etc/events.xml`:
 

```

<event name="customer_register_success">
  <observer name="vendor_module_customer_register_observer" instance="
  Vendor\Module\Observer\CustomerRegisterSuccess" />
</event>

```
- C. Declare in `etc/observer.xml`:
 

```

<observer name="vendor_module_customer_register_observer">
  <event name="customer_register_success" instance="
  Vendor\Module\Observer\CustomerRegisterSuccess" />

```

</observer>

**Answer: B**

#### NEW QUESTION # 46

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Preferences
- B. Constructor arguments
- C. Virtual types

**Answer: C**

Explanation:

The correct approach is Virtual types.

Virtual types allow developers to configure existing classes with different constructor arguments and create multiple variations of the same class without modifying the core or legacy code.

Preferences (C) would replace one class with another entirely, which could break the legacy functionality.

Constructor arguments (A) are part of DI but don't allow multiple variants of the same class like virtual types do.
