

AWS-Developer Test Cram Review - AWS-Developer Dump Torrent

What's more, part of that TestPassKing AWS-Developer dumps now are free: <https://drive.google.com/open?id=1HqWLOV4Q6JazxqVdjIcdVXsn7vZ4XEcm>

Some candidates may purchase our AWS-Developer software test simulator for their companies. They will ask us how many personal computers our soft version can be install. In fact we have no limit for computer quantity. So if you purchase our AWS-Developer software test simulator, it supports multi-users at the same time. It can be installed on computers without any limits. If you are a training school, it is suitable for your teachers to present and explain casually. Good AWS-Developer software test simulator have high passing rate and TestPassKing are looking forward to your long-term cooperation.

The AWS Certified Developer - Associate certification is intended for individuals who have at least one year of hands-on experience in developing and maintaining applications on the AWS platform. AWS Certified Developer Associate Exam (DVA-C02) certification validates the skills and knowledge required to develop cloud-based applications using AWS services such as Amazon S3, Amazon DynamoDB, AWS Lambda, AWS Elastic Beanstalk, and more. It also validates the ability to use AWS SDKs to write code that interacts with AWS services.

Pass Guaranteed Quiz Amazon - AWS-Developer –High Pass-Rate Test Cram Review

We all know the effective diligence is in direct proportion to outcome, so by years of diligent work, our experts have collected the frequent-tested knowledge into our Amazon AWS-Developer practice materials for your reference. So our AWS Certified Developer Associate Exam (DVA-C02) training materials are triumph of their endeavor.

To prepare for the AWS-Developer Certification Exam, candidates can take advantage of the training and resources offered by AWS. AWS offers a range of training courses, including online courses, instructor-led training, and self-paced learning paths. There are also a range of resources available to help candidates prepare for the exam, including practice exams, exam guides, and whitepapers.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q184-Q189):

NEW QUESTION # 184

In AWS, which security aspects are the customer's responsibility? Choose 4 answers

- A. Patch management on the EC2 instance's operating system
- B. Decommissioning storage devices
- C. Security Group and ACL (Access Control List) settings
- D. Life-cycle management of IAM credentials
- E. Controlling physical access to compute resources
- F. Encryption of EBS (Elastic Block Storage) volumes

Answer: A,C,D,F

Explanation:

Explanation

Physical and Environmental Security

AWS's data centers are state of the art, utilizing innovative architectural and engineering approaches.

Amazon has many years of experience in designing, constructing, and operating large-scale data centers. This experience has been applied to the AWS platform and infrastructure. AWS data centers are housed in nondescript facilities. Physical access is strictly controlled both at the perimeter and at building ingress points by professional security staff utilizing video surveillance, intrusion detection systems, and other electronic means. Authorized staff must pass two-factor authentication a minimum of two times to access data center floors. All visitors and contractors are required to present identification and are signed in and continually escorted by authorized staff.

Storage Decommissioning

* When a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals.

* AWS uses the techniques detailed in DoD 5220.22-M (National Industrial Security Program Operating Manual) or NIST 800-88 (Guidelines for Media Sanitization) to destroy data as part of the decommissioning process.

* All decommissioned magnetic storage devices are degaussed and physically destroyed in accordance with industry-standard practices.

NEW QUESTION # 185

A user has configured ELB with two instances running in separate AZs of the same region?

Which of the below mentioned statements is true?

- A. Multi AZ instances will provide HA with ELB
- B. The user can achieve both HA and scalability with ELB
- C. Multi AZ instances are not possible with a single ELB
- D. Multi AZ instances will provide scalability with ELB

Answer: A

Explanation:

If a user is running two instances in separate AZs, it will provide HA with ELB since ELB will automatically stop routing the traffic to unhealthy instances and send it to healthy instances only.

NEW QUESTION # 186

A user wants to access RDS from an EC2 instance using IP addresses. Both RDS and EC2 are in the same region, but different AZs. Which of the below mentioned options help configure that the instance is accessed faster?

- A. Configure the Public IP of the instance in RDS security group
- B. Configuring the elastic IP of the instance in RDS security group
- C. Security group of EC2 allowed in the RDS security group
- D. Configure the Private IP of the Instance in RDS security group

Answer: D

Explanation:

If the user is going to specify an IP range in RDS security group, AWS recommends using the private IP address of the Amazon EC2 instance. This provides a more direct network route from the Amazon EC2 instance to the Amazon RDS DB instance, and does not incur network charges for the data sent outside of the Amazon network.

http://docs.aws.amazon.com/AmazonRDS/latest/UserGuide/USER_WorkingWithSecurityGroups.html

NEW QUESTION # 187

A developer is building a highly secure healthcare application using serverless components. This application requires writing temporary data to /tmp storage on an AWS Lambda function. How should the developer encrypt this data?

- A. Set up the Lambda function with a role and key policy to access an AWS KMS key. Use the key to generate a data key used to encrypt all data prior to writing to /tmp storage.
- B. Use OpenSSL to generate a symmetric encryption key on Lambda startup. Use this key to encrypt the data prior to writing to /tmp.
- C. Enable Amazon EBS volume encryption with an AWS KMS key in the Lambda function configuration so that all storage attached to the Lambda function is encrypted.
- D. Use an on-premises hardware security module (HSM) to generate keys, where the Lambda function requests a data key from the HSM and uses that to encrypt data on all requests to the function.

Answer: A

NEW QUESTION # 188

In AWS, which security aspects are the customer's responsibility? Choose 4 answers

- A. Patch management on the EC2 instance's operating system
- B. Decommissioning storage devices
- C. Security Group and ACL (Access Control List) settings
- D. Life-cycle management of IAM credentials
- E. Controlling physical access to compute resources
- F. Encryption of EBS (Elastic Block Storage) volumes
