## Qlik Sense System Administrator Certification Exam - February 2021 Release Sample Questions (Q132-Q137):

### NEW QUESTION # 132

A system administrator is creating a multi-node Qlik Sense Enterprise environment. The administrator successfully sets up the central node and a rim node. The administrator needs to configure the rim node as user node, then add a second rim node to the cluster and configure it as a reload node.

How should the system administrator meet these requirements?

- A. 1. Run the Qlik Sense Enterprise installer on the existing rim node.
- B. 1. Install Qlik Sense Enterprise on the second rim node and join the cluster
- C. 1. Run the Qlik Sense Enterprise installer on the existing rim node
- **D. 1. Install Qlik Sense Enterprise on the second rim node and join the cluster**

**Answer: D**

#### NEW QUESTION # 133

A user needs to upgrade a published app in the Finance stream. After the changes have been made, the app needs to be moved to the Accounting stream. The user has access to a laptop running Windows 7 (32-bit). The owner of all published apps in the sa\_repository user.

Which steps should a system administrator take to efficiently complete this task?

- A. 1. Export the app to a location for the user to make the changes using Qlik Sense Desktop
- B. 1. Change the app owner to the user to make changes
- **C. 1. Give the user permissions to make changes to the app**
- D. 1. Change the app owner to the user to make changes

**Answer: C**

#### NEW QUESTION # 134

A user made an application on Qlik Sense Desktop by connecting to a company database. This application can perform recharges normally. Now that the company has acquired Qlik Sense Enterprise the application has been imported to the server.

The administrator then successfully imports the application and publishes the app to the Sales flow in the hub. The administrator creates a task to reload the data in the application at 6:00AM the next day.

The next day users notice that the data has not been updated. No modifications have been made since then to access the data source.

What is the probable cause of this problem?

- A. The system administrator does not have permission to access the database used by the application
- B. A custom properties rule is preventing the load from being performed
- C. A security rule is preventing data from reloading in the app
- **D. A data connection with an equal name pre-existed on the Qlik Sense server before importing**

**Answer: D**

#### NEW QUESTION # 135

A company changes its network policies. The system administrator finds that the exported visualizations are blank.

Which Qlik service settings should the system administrator change?
