Pass Guaranteed 2026 Nutanix NCP-MCA –Efficient Certification Questions

NCP-MCA exam dumps at ActualPDF are always kept up to date. Every addition or subtraction of NCP-MCA exam dumps in the exam syllabus is updated in our brain dumps instantly. Practice on real NCP-MCA exam dumps and we have provided their answers too for your convenience. If you put just a bit of extra effort, you can score the highest possible score in the Real NCP-MCA Exam because our NCP-MCA exam preparation dumps are designed for the best results.

The NCP-MCA Exam covers a range of topics, including Nutanix Calm, which is Nutanix's automation and orchestration platform.

Candidates will be tested on their ability to use Calm to automate application deployment, scaling, and management across multiple clouds. NCP-MCA exam also covers Nutanix Era, which is a database-as-a-service platform designed to simplify database provisioning, management, and lifecycle operations. Other topics covered by the exam include Nutanix Xi Leap, which is a disaster recovery and business continuity solution, and Nutanix Files, which is a software-defined file storage solution.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which Calm feature enables the ability to enforce project quotas for the ESXi hypervisor?

- **A. Policy Engine**
- B. Project Environments
- C. Project Quotas
- D. Runbooks

Answer: A

Explanation:

The Policy Engine is a Calm feature that allows you to define and enforce policies for your projects, such as quotas, approvals, and actions. You can use the Policy Engine to set project quotas for the ESXi hypervisor, such as the number of VMs, CPU cores, memory, and storage that can be provisioned by the project. This helps you to control the resource consumption and allocation of your ESXi clusters. References:

* Nutanix Support & Insights: This is the official Nutanix documentation for Calm on ESXi, where you can find information about the Policy Engine and how to configure it for your projects.

* Nutanix Exam NCP-MCA Topic 2 Question 28 Discussion: This is a forum where you can find discussions and explanations for Nutanix certification exam questions, including question 28 from topic 2, which is similar to your question.

* Calm on ESXi Deployment: This is a Nutanix community post where you can learn more about how to deploy and use Calm on ESXi.

NEW QUESTION # 16

Which permission level grants access to Create, Update, Delete, and Duplicate Blueprints?

- A. Consumer
- **B. Developer**
- C. Operator
- D. Domain Admin

Answer: B

NEW QUESTION # 17

Which statement is true regarding adding an additional step at the end of a predefined playbook?

- **A. The predefined playbook can be cloned and updates made to the clone.**
- B. The predefined playbook must be updated using a REST API.
- C. A new playbook must be created in this scenario.
- D. The predefined playbook can be updated and the action added directly.

Answer: A

Explanation:

Nutanix Prism Central includes Predefined Playbooks (System Playbooks) that cover common use cases (e.g., "Email on Alert"). These system playbooks are protected templates.

* Immutability: You cannot directly edit or modify a Predefined Playbook (making Option D incorrect).

* Cloning Workflow: To customize a Predefined Playbook—such as adding an additional action step like "Slack Notification" or "VM Snapshot" at the end—the administrator must clone the playbook.

* Process: Select the Predefined Playbook -> Click "Clone" -> Save as a new User Playbook. The administrator can then fully edit triggers and actions in this new copy.

* While this effectively creates a "new" playbook (Option B), the specific mechanism provided in the interface and documentation to leverage the existing definition is Cloning.

NEW QUESTION # 18

Exhibit.

A Blueprint Developer has been asked to Create a Application Blueprint for AWS and Azure.

Which two actions must be complete to enable the developer to complete this requested task? (Choose two.)

- A. Add the provider Accounts to the project.
- B. Select a public image in the region.
- C. Enable Environment for AWS and Azure.
- D. Create AWS and Azure Accounts.

Answer: A,D

Explanation:

To create an application blueprint for AWS and Azure in Nutanix Calm, the Blueprint Developer needs to complete the following actions:

Create AWS and Azure Accounts: These accounts must be created and configured within Nutanix Calm to allow integration with the respective cloud providers.

Add the provider Accounts to the project: Once the accounts are created, they need to be added to the specific project in which the blueprint will be developed. This ensures that the blueprint can use the resources and configurations associated with these accounts.

NEW QUESTION # 19

Refer to exhibits.

The variable VM_NAME is giving a warning that indicates that the variable is not found. When checking the Service tab, the variable is found to match the VM_NAME field entry as shown in the exhibit below:

What is causing this warning message?

- A. Service Name matches the variable name
- B. @@{calm_time}@@ output is longer than allowed for a Service Name
- C. VM_NAME variable must be defined under Application Profile
- D. User modifiable variable for VM_NAME is not allowed

Answer: D
