Once you have used our dbt-Analytics-Engineering exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use dbt-Analytics-Engineering exam training at your own right. Our dbt-Analytics-Engineering Exam Training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use dbt-Analytics-Engineering test guide, you can enter the learning state.

dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q193-Q198):

NEW QUESTION # 193

You discover that dbt models run significantly slower in your production environment than in development. What potential causes should you investigate?

- A. Inefficient use of snapshots or incremental models in your production dbt project_
- B. Production data volume being significantly larger than development data.
- C. Network latency impacting access to remote data sources.
- D. Different database configurations or resource allocations (memory, CPU, etc.) between environments-

Answer: B,C,D

Explanation:

Each of these directly affects performance and could differ significantly between environments. C is relevant, but less likely the sole cause if development is performant.

NEW QUESTION # 194

Several models perform similar filtering and aggregation on a frequently used source table. What's the most effective way to streamline this process and improve maintainability?

- A. Replicate the filtering and aggregation logic directly within each model.
- **B. Create an ephemeral model to prepare the data in a common format, referenced by downstream models.**
- C. Create a table materialization to hold the pre-processed data.
- D. Create a snapshot to capture the pre-processed state of the source table.

Answer: B

Explanation:

Ephemeral models within CTEs allow for reusable intermediate steps in data transformation and are perfect for avoiding logic duplication across multiple models.

NEW QUESTION # 195

(Multiple Select)

- **A. Scheduling less critical tests to run during off-peak hours.**
- **B. Configuring tests to run only on models that have changed or have upstream changes.**
- C. Running dbt tests in parallel with dbt model builds whenever possible-
- **D. Designing tests, where feasible, to examine subsets of data rather than full tables.**

Answer: A,B,D

Explanation:

A targets tests to the most relevant areas, reducing workload. C leverages less busy periods to avoid resource contention. D reduces individual test runtimes through sampling. B is generally inadvisable, as testing and model building might compete for resources.

NEW QUESTION # 196

You need a materialization that automatically adapts to upstream schema changes while still preserving query performance. Which dbt materialization offers this kind of flexibility?

- **A. View**
- B. Ephemeral
- C. Incremental
- D. Snapshot

Answer: A

Explanation:

Views are dynamically built at query time, inheriting their schema from the underlying sources, thus providing built-in adaptation.

NEW QUESTION # 197

While onboarding a new team member, you need to ensure consistency between their local development setup and your existing production dbt deployment. Which of these are essential?

- **A. All of the above.**
- B. Providing clear documentation on configuration of profiles.yml to connect to the correct targets.
- C. Setting up access and permissions in the data warehouse for the new user, aligning with your team's security practices.

- D. Enforcing version control and utilizing a requirements.txt file to pin dbt and adapter dependencies.

Answer: A

Explanation:

A: Version control and pinning dependencies ensure reliable behavior across machines. B: Accurate profiles are vital for successful dbt runs. C: Data warehouse access is necessary for the developer to function.
