

DumpsFree WGU Managing-Cloud-Security Dumps (2026)

WGU D320 Pre- Assessment (New Update) Managing Cloud Security | Qs & As| Grade A| 100% Correct (Verified Answers)

QUESTION
The Department of Justice (DOJ) assesses options for a new cloud-hosted collaboration solution.
What should it use to ensure that the vendors are compliant with the governmental regulations for data management in the United States?

Business partnership agreement (BPA)
Federal Risk and Authorization Management Program (FedRAMP)
European Union Agency for Network and Information Security (ENISA)
Nondisclosure agreement (NDA)

Answer:
Federal Risk and Authorization Management Program (FedRAMP)

QUESTION
A European Union (EU) citizen contacts a company doing business in the EU, claiming that its data processing activities are out compliance with the General Data Protection Regulation (GDPR).
What must the company do if it wishes to continue processing this personal data?

File an appeal with the (CJEU) within 60 days and continue processing the data
Demonstrate that this data processing is a necessary business requirement
Demonstrate that this data processing is authorized under approved stand

Answer:
Demonstrate that this data processing is authorized under approved standards

The most interesting thing about the learning platform is not the number of questions, not the price, but the accurate analysis of each year's exam questions. Our Managing-Cloud-Security guide dump through the analysis of each subject research, found that there are a lot of hidden rules worth exploring, this is very necessary, at the same time, our Managing-Cloud-Security training materials have a super dream team of experts, so you can strictly control the proposition trend every year. In the annual examination questions, our Managing-Cloud-Security study questions have the corresponding rules to summarize, and can accurately predict this year's test hot spot and the proposition direction. This allows the user to prepare for the test full of confidence.

We believe that every customer pays most attention to quality when he is shopping. Only high-quality goods can meet the needs of every customer better. And our Managing-Cloud-Security study materials have such high quality, because its hit rate of test questions is extremely high. Perhaps you will find in the examination that a lot of questions you have seen many times in our Managing-Cloud-Security Study Materials. In addition, the passing rate is the best test for quality of study materials. And we can be very proud to tell you that the passing rate of our Managing-Cloud-Security study materials is almost 100 %.

Managing-Cloud-Security Valid Test Materials - Reliable & Professional

Managing-Cloud-Security Materials Free Download for WGU Managing-Cloud-Security Exam

The Managing-Cloud-Security PDF Questions of DumpsFree are authentic and real. These WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam questions help applicants prepare well prior to entering the actual WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam center. Due to our actual Managing-Cloud-Security Exam Dumps, our valued customers always pass their WGU Managing-Cloud-Security exam on the very first try hence, saving their precious time and money too.

WGU Managing Cloud Security (JY02) Sample Questions (Q46-Q51):

NEW QUESTION # 46

Which phase of software design covers the combination of individual components of developed code and the determination of proper interoperability?

- A. Training
- B. Coding
- C. Testing
- D. Planning

Answer: C

Explanation:

The phase of software design that integrates individual code components and verifies their interoperability is Testing, specifically integration testing. After developers write and unit-test individual modules, those modules must be combined into a complete system. The testing phase ensures that these modules communicate properly, data flows correctly, and overall functionality meets requirements.

Planning establishes project goals, coding builds individual components, and training prepares users. None of these directly verify interoperability. Testing is critical because even well-functioning components may fail when combined, due to interface mismatches, unexpected data structures, or dependency issues.

Cloud-based systems often integrate microservices, APIs, and third-party services. Testing validates that these distributed components interact seamlessly. Proper testing reduces defects, supports reliability, and ensures a consistent end-user experience. It also aligns with DevOps practices, where continuous integration and automated testing pipelines quickly identify and remediate interoperability issues.

NEW QUESTION # 47

An organization is implementing a new hybrid cloud deployment. Before granting access to any of the resources, the security team wants to ensure that all employees are checked against a database to see if they are allowed to access the requested resource. Which type of security control is the organization leveraging for its employees?

- A. Authorization
- B. Antispyware program
- C. Authentication
- D. Web application firewall (WAF)

Answer: A

Explanation:

The described control is authorization, which occurs after authentication. Authorization determines what resources a user can access based on their role, attributes, or policies stored in an access control database.

Authentication confirms identity, but authorization validates permissions. WAFs protect applications from malicious traffic, and antispyware tools detect malware. Neither applies to access decisions.

By checking users against a database of permissions, the organization enforces the principle of least privilege, ensuring employees only access the resources necessary for their role. This strengthens data protection, reduces insider threats, and aligns with compliance requirements for access governance.

NEW QUESTION # 48

An organization is considering a cloud provider that has multivendor pathway connectivity. What does this feature provide?

- A. Connections to several internet service providers
- B. Contracts with heating, ventilation, and air conditioning (HVAC) providers
- C. Connections to several electric providers that are not on the same grid
- D. Contracts with fuel providers

Answer: A

Explanation:

Multivendor pathway connectivity refers to a cloud provider's ability to maintain connections with multiple internet service providers (ISPs). This ensures redundancy and reduces the risk of outages due to a single ISP failure.

Electric providers, fuel vendors, and HVAC contracts support facility resilience, but they are not directly tied to connectivity. The purpose of multivendor pathways is specifically to guarantee uninterrupted network access and resilience for customer workloads. By maintaining ISP redundancy, cloud providers improve availability and meet SLA commitments. This capability is especially critical for enterprises requiring high uptime or operating in regions where connectivity disruptions are common. It also provides flexibility in bandwidth management and routing optimization.

NEW QUESTION # 49

An organization needs to provide space where security administrators can centrally monitor network traffic and events and respond to threats or outages. What should the organization create?

- A. Disaster response team (DRT)
- B. Emergency response team (ERT)
- C. Security operations center (SOC)
- D. Network operations center (NOC)

Answer: C

Explanation:

A Security Operations Center (SOC) is a centralized facility that allows administrators to monitor, detect, investigate, and respond to cybersecurity events in real time. SOC teams leverage tools such as SIEM (Security Information and Event Management), threat intelligence, and incident response playbooks.

ERTs and DRTs are teams focused on emergencies and disaster recovery, respectively, but they do not provide continuous monitoring. A NOC focuses on performance and availability of IT infrastructure but not on security threats.

By establishing a SOC, organizations ensure 24/7 visibility into security events, coordinated incident handling, and compliance with standards such as ISO 27001 and SOC 2. SOCs are essential in cloud environments where threats evolve rapidly, and centralized expertise is needed to minimize impact.

NEW QUESTION # 50

An organization is planning for an upcoming Payment Card Industry Data Security Standard (PCI DSS) audit and wants to ensure that only relevant files are included in the audit materials. Which process should the organization use to ensure that the relevant files are identified?

- A. Tokenization
- B. Anonymization
- C. Categorization
- D. Normalization

Answer: C

Explanation:

Categorization is the process of systematically identifying and classifying files according to content and relevance. In preparation for a PCI DSS audit, it is critical to identify which files fall within scope—those that contain cardholder data or impact its security.

Normalization adjusts data format, tokenization substitutes sensitive data with tokens, and anonymization removes identifiers. While useful, none directly address the task of isolating "relevant files" for audit.

Categorization ensures that files are grouped correctly, allowing auditors to focus on the proper scope and preventing unnecessary exposure of unrelated data.

This step aligns with PCI DSS requirements that limit scope to systems and data directly affecting cardholder data security. Proper categorization streamlines audits and demonstrates effective data governance.

NEW QUESTION # 51

.....

Passing the Managing-Cloud-Security exam and obtaining the certification mean opening up a new and fascination phase of your professional career. Just imagine that what a brighter future will be with the Managing-Cloud-Security certification! You may be employed by a bigger enterprise and get a higher position. The income will be doubled for sure. And Our Managing-Cloud-Security study braindumps enable you to meet the demands of the actual certification exam within days. We can claim that with our Managing-Cloud-Security practice guide for 20 to 30 hours, you are able to attend the exam with confidence.

Managing-Cloud-Security Exam Prep: <https://www.dumpsfree.com/Managing-Cloud-Security-valid-exam.html>

After reaching the Managing-Cloud-Security Exam Prep (or equivalent level of knowledge), professionals can attempt to obtain three sub-level Managing-Cloud-Security Exam Prep s by passing one of the three exams, Before you buy, you can free download the demo of Managing-Cloud-Security passleader vce to learn about our products, WGU Managing-Cloud-Security Valid Test Materials The software allows for multiple modes and features, Quick payment for our Managing-Cloud-Security Exam Prep - WGU Managing Cloud Security (JY02) exam guide.

As long as you click into the link of our Managing-Cloud-Security learning engine, you will find that our Managing-Cloud-Security practice quiz are convenient and perfect, Take a word or phrase and remove the vowels.

After reaching the Courses and Certificates (or equivalent level of knowledge), Managing-Cloud-Security professionals can attempt to obtain three sub-level Courses and Certificates s by passing one of the three exams.

Latest WGU Managing-Cloud-Security Valid Test Materials and High Hit Rate Managing-Cloud-Security Exam Prep

Before you buy, you can free download the demo of Managing-Cloud-Security passleader vce to learn about our products, The software allows for multiple modes and features, Quick payment for our WGU Managing Cloud Security (JY02) exam guide.

Finally, I want to declare the safety of the WGU Managing Cloud Security (JY02) test engine.
