### Palo Alto Networks XSIAM Analyst Sample Questions (Q40-Q45):

#### NEW QUESTION # 40

When a sub-playbook loops, which task tab will allow an analyst to determine what data the sub-playbook used in each iteration of the loop?

- A. Outputs
- **B. Input Results**
- C. Inputs
- D. Results

**Answer: B**

Explanation:

The correct answer is A - Input Results.

In Cortex XSIAM playbooks, when sub-playbooks are configured to loop, the Input Results tab within the task view allows analysts to see exactly what input data was provided to the sub-playbook during each iteration of the loop. This is essential for understanding playbook behavior and troubleshooting automation flows.

"The Input Results tab in the playbook task provides visibility into the data supplied to a sub-playbook for every loop iteration, allowing analysts to review how the input changes across executions." Document Reference: XSIAM Analyst ILT Lab Guide.pdf Page: Page 39 (Automation section)

#### NEW QUESTION # 41

##### SCENARIO:

A security analyst has been assigned a ticket from the help desk stating that users are experiencing errors when attempting to open files on a specific network share. These errors state that the file format cannot be opened. IT has verified that the file server is online and functioning, but that all files have unusual extensions attached to them.

The security analyst reviews alerts within Cortex XSIAM and identifies malicious activity related to a possible ransomware attack on the file server. This incident is then escalated to the incident response team for further investigation.

Upon reviewing the incident, the responders confirm that ransomware was successfully executed on the file server. Other details of the attack are noted below:

- \* An unpatched vulnerability on an externally facing web server was exploited for initial access
- \* The attackers successfully used Mimikatz to dump sensitive credentials that were used for privilege escalation
- \* PowerShell was used on a Windows server for additional discovery, as well as lateral movement to other systems
- \* The attackers executed SystemBC RAT on multiple systems to maintain remote access
- \* Ransomware payload was downloaded on the file server via an external site "file io"

QUESTION STATEMENT:

Which forensics artifact collected by Cortex XSIAM will help the responders identify what the attackers were looking for during the discovery phase of the attack?

- A. Shell history
- B. WordWheelQuery
- C. User access logging
- D. PSReadline

**Answer: A**

Explanation:

The correct answer is D - Shell history.

The Shell history artifact provides a detailed record of commands executed during interactive shell sessions (such as via PowerShell or command prompt) on Windows and Linux systems. Reviewing this artifact enables responders to reconstruct the attacker's activity during the discovery phase, showing exactly what directories, files, and commands were accessed or run, and what the attackers were searching for.

"The Shell history artifact allows responders to see what commands were executed during the attack, providing insight into attacker intent and discovery activities." Document Reference: XSIAM Analyst ILT Lab Guide.pdf Page: Page 46 (Incident Handling section, Causality and Forensics)

#### NEW QUESTION # 42

Which native automation can be triggered from within a playbook or incident in Cortex XSIAM?

Response:

- A. Ticket closure
- B. User onboarding
- C. Endpoint isolation
- D. Software upgrade

**Answer: C**

#### NEW QUESTION # 43

Which dataset should an analyst search when looking for Palo Alto Networks NGFW logs?

- A. dataset = ngfw\_threat\_pan\_raw

- B. dataset = panwngfwtraffic\_raw
- C. dataset = ngfw
- D. dataset = pan\_dss\_raw

**Answer: B**

Explanation:

The correct answer is C - dataset = panwngfwtraffic\_raw.

The correct dataset for Palo Alto Networks Next-Generation Firewall (NGFW) logs in Cortex XSIAM is panwngfwtraffic\_raw, which contains all relevant traffic, threat, and system logs ingested from PAN NGFW devices.

"The panwngfwtraffic\_raw dataset contains raw traffic logs collected from Palo Alto Networks NGFW devices and is the recommended source for investigation." Document Reference: EDU-270c-10-lab-guide\_02.docx (1).pdf Page: Page 25 (Data Analysis with XQL section)

#### NEW QUESTION # 44

What is the role of the XQL Helper in Cortex XSIAM?

Response:

- A. Stores alert configurations
- B. Manages incident triage
- C. Offers syntax assistance and autocomplete for queries
- D. Provides real-time script testing

**Answer: C**
