## **CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q165-Q170):**

### **NEW QUESTION # 165**

A software developer wants to ensure a packaged application can be deployed in different environments without modifying anything but the application settings. The developer creates an image and provides instructions for the systems administrator to use for deployment. This is an example of:

- A. source code control.
- **B. containerization.**
- C. deployment automation.
- D. application versioning.

**Answer: B**

Explanation:

Containerization is the process of developing software applications for containers, which are isolated user spaces that bundle application code with all the dependencies and libraries required to run on any infrastructure. Containerization allows applications to be deployed in different environments without modifying anything but the application settings. This is different from application versioning, which is the practice of assigning unique identifiers to different versions of an application. Source code control is the management of changes to source code files, which is not related to deployment. Deployment automation is the use of tools and scripts to automate the deployment process, which may or may not involve containers. ### **NEW QUESTION # 166**

A business analyst is drafting a risk assessment.

Which of the following components should be included in the draft? (Choose two.)

- **A. Data classification**
- B. Asset management
- C. Database type
- **D. Asset inventory**
- E. Encryption algorithms
- F. Certificate name

**Answer: A,D**

### **NEW QUESTION # 167**

Which of the following results from implementing a proprietary SaaS solution when an organization does not ensure the solution adopts open standards? (Choose two.)

- A. Lack of technical support
- B. Higher ongoing operational expenditure
- C. Inability to enforce the SLA
- D. Higher initial capital expenditure

- E. Integration issues
- F. Vendor lock-in

**Answer: E,F**

Explanation:

A proprietary SaaS solution is one that uses a specific vendor's software and platform, which may not be compatible with other vendors' solutions or industry standards. This can result in vendor lock-in, which means that the organization becomes dependent on the vendor and cannot easily switch to another provider or solution without significant costs or risks. Vendor lock-in can also limit the organization's ability to negotiate better terms or prices with the vendor. Integration issues can arise when the proprietary SaaS solution does not support open standards, which are widely accepted and interoperable protocols or formats that enable different systems or applications to communicate and exchange data. Open standards can facilitate integration with other cloud or on-premise solutions, as well as enhance portability and scalability of the cloud services. If the SaaS solution does not adopt open standards, the organization may face challenges or limitations in integrating the solution with its existing or future IT environment, which can affect the functionality, performance, and security of the cloud services. ### **NEW QUESTION # 168**

Which of the following BEST represents a successful presentation to a customer of the working result of a new cloud feature?

- A. Feasibility study
- B. Proof of concept
- C. Baseline
- D. Benchmark

**Answer: B**

Explanation:

A proof of concept (PoC) is a way to demonstrate that a new cloud feature is feasible and works as intended. A PoC is usually limited to the technical requirements of the feature and does not involve the user interface or user feedback. A PoC is used to show the customer the working result of the new cloud feature and to convince them to adopt the solution<sup>12</sup>. A PoC is different from a benchmark, which is a measure of the performance or quality of a system or product. A PoC is also different from a baseline, which is a reference point or standard for comparison. A PoC is also different from a feasibility study, which is an analysis of the viability and benefits of a project or idea<sup>3</sup>.
