Free PDF Quiz 2026 Efficient C-TS422-2023: Valid SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Exam Prep

In the Desktop C-TS422-2023 practice exam software version of SAP C-TS422-2023 practice test is updated and real. The software is useable on Windows-based computers and laptops. There is a demo of the C-TS422-2023 practice exam which is totally free. C-TS422-2023 practice test is very customizable and you can adjust its time and number of questions. Desktop C-TS422-2023 Practice Exam software also keeps track of the earlier attempted C-TS422-2023 practice test so you can know mistakes and overcome them at each and every step.

SAP S/4HANA Cloud Private Edition - Production Planning and

Manufacturing Sample Questions (Q38-Q43):

NEW QUESTION # 38
Your company produces a finished good based on a forecast expects it to be in stock when customers order it. If customers order more than the forecasted quantity this must NOT have any impact on the production program.
Which planning strategy do you use?

- A. Planning without final assembly (50)
- B. Maketostock production (10)
- C. Assembly processing with production orders (82)
- D. Planning with final assembly (40)

Answer: B

NEW QUESTION # 39
You are trying to create a production order and NO valid production version can be selected. What could be the reasons?
Note: There are 2 correct answers to this question.

- A. NO bills of material (BOMs) are assigned to the production versions.
- B. All production versions for the material are locked.
- C. NO production lines are assigned to the production versions..
- D. The order lot size is NOT within the validity range of a production version.

Answer: A,D

Explanation:
A production version is a master data object that links a bill of material (BOM) and a routing or a production process model (PPM) for a material. A production version is required for creating a production order in SAP S/4HANA, as it determines the components, operations, and resources that are needed for producing the material. You can create a production version manually or automatically using the CS_BOM_PRODVER_MIGRATION02 report1.
If you are trying to create a production order and no valid production version can be selected, it could be because of the following reasons:
No bills of material (BOMs) are assigned to the production versions (A): A BOM is a master data object that defines the components and the quantities that are required for producing a material. A production version must have a valid BOM assigned to it, otherwise it cannot be used for creating a production order. You can assign a BOM to a production version on the MRP 4 tab page of the material master2.
The order lot size is not within the validity range of a production version (C): A production version has a validity range that defines the period and the lot size interval in which it can be used for production planning. The validity range is maintained on the MRP 4 tab page of the material master2. If the order lot size (the quantity of the material to be produced) is not within the lot size interval of any production version, then no valid production version can be selected for creating a production order.
The other options are not valid reasons for not being able to select a production version for creating a production order:
All production versions for the material are locked (B): A production version can have a status that indicates whether it is active or locked. A locked production version cannot be used for production planning, but it can still be selected for creating a production order. However, the system will issue a warning message that the production version is locked and ask for confirmation before proceeding with the order creation3.
No production lines are assigned to the production versions (D): A production line is an organizational unit that represents a group of resources that are used for producing a material. A production line can be assigned to a production version on the MRP 4 tab page of the material master2. However, this assignment is optional and not mandatory for creating a production order. A production line can be used for grouping production versions for reporting or analysis purposes, but it does not affect the selection of a production version for creating a production order4.

NEW QUESTION # 40
What could be the reason for multiple commitments where several operations have the same scheduled dates on a work center after dispatching? Note: There are 2 correct answers to this question.

- A. The Finite Scheduling indicator is NOT set in the strategy profile.
- B. Alternative work centers are fully occupied.
- C. The work center has several individual capacities.

- D. The Change Planning Direction indicator is set in the strategy profile.

Answer: A,C

NEW QUESTION # 41

What are the key features of using a low level code?
Note: There are 2 correct answers to this question.

  - A. To determine the sequence in which materials are planned in MRP
  - B. To determine how costs are rolled up by product costing
  - C. To determine the priority of alternative components inside ATP
  - D. To determine the use of subitems inside material BOM (bill of material)

Answer: A,B

NEW QUESTION # 42

Which information is required when you create a product master in SAP S/4HANA Cloud Private Edition?
Note: There are 2 correct answers to this question.

  - A. Industry sector
  - B. Product type
  - C. Selection screen for views
  - D. Base unit of measure

Answer: A,D

NEW QUESTION # 43

......
