

高質量的Arch-303熱門考古題，免費下載Arch-303考試資料幫助妳通過Arch-303考試

從Google Drive中免費下載最新的KaoGuTi Arch-303 PDF版考試題庫：<https://drive.google.com/open?id=1OuCmKeBF4Q9bjLa2vN5IBNdV-6LqLu3f>

親愛的廣大考生，你有沒有想過參與任何Salesforce的Arch-303考試的培訓課程嗎？其實你可以採取措施一次通過認證，KaoGuTi Salesforce的Arch-303考試題培訓資料是個不錯的選擇，本站虛擬的網路集訓和使用課程包涵大量你們需要的考題集，完全可以讓你們順利通過認證。

很多新人剛進入公司就聽說，每個月都會有Salesforce 證照考試，如果過了，年底有獎金的發放，根據你完成證照的情況，才完成獎金的分配。然而對於沒有參加過任何證照考試的新人來說，是一次不錯挑戰。KaoGuTi 剛剛更新的Salesforce Arch-303 擬真試題剛好可以幫助很多新人，如果你正在準備Salesforce Arch-303 考試的話，可以利用我們最新的擬真試題仔細地複習備考了。因為最新的Arch-303 擬真試題可以為你的複習和看書減輕很多的煩惱。

>> Arch-303熱門考古題 <<

完全包括的Arch-303熱門考古題 |高通過率的考試材料|更新的Arch-303證照資訊

我們KaoGuTi Salesforce的Arch-303考試培訓資料給所有需要的人帶來最大的成功率，通過微軟的Arch-303考試是一個具有挑戰性的認證考試。現在除了書籍，互聯網被認為是一個知識的寶庫，在KaoGuTi你也可以找到屬於你的知識寶庫，這將是一個對你有很大幫助的網站，你會遇到複雜的測試方面的試題，我們KaoGuTi可以幫助你輕鬆的通過考試，它涵蓋了所有必要的知識Salesforce的Arch-303考試。

最新的 Salesforce Architect Arch-303 免費考試真題 (Q46-Q51):

問題 #46

a client uses an external marketing tool to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and they get Import-ready feeds created by this tool on an SFTP location. The marketing team completes the data preparation by the end of the work day.

How should the Architect handle this import?

- A. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons
- B. Create a Job and define three steps: one standard step to download files from sftp and two steps that use Execute Script Module to import the promotion and coupons.
- C. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, and two standard steps to Import the promotion and coupons.
- **D. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.**

答案： D

解題說明：

To handle the import of promotion and coupon data from an SFTP location, the best approach is to create a job consisting of three steps as described in option C. The first step involves a custom script to download the files from the SFTP server-this is necessary because file retrieval from external servers typically requires specific connectivity and security configurations that are best handled in a custom-coded step. The subsequent two steps would utilize standard Salesforce B2C Commerce job steps to import the downloaded promotion and coupon data into the platform. This method ensures that the data flow is streamlined, from retrieval through to integration into the Commerce platform.

問題 #47

Northern Trail Outfitters (NTO) operate 200 physical stores. NTO has products that are available in some of the physical stores and not available in others. The closest physical store is determined based on customer's post zip code when they are shopping online. Only the products that are available in the customer's closest physical store should be presented to the customer in the search results.

What are the two feasible technical approaches to meet these requirements?

Choose 2 answers

- **A. Create a separate category per physical store use post/Zip code with a mapping to determine the relevant category. Show only the products from this category.**
- B. Create a separate shipping method per physical store. Use post/zip code to determine the applicable shipping method. Show only the products that are not excluded from the shipping method.
- **C. Create a separate pricebook per physical store. Use post/zip code to activate this pricebook through a customer group. Show only the products with price by applying price refinement.**
- D. Create a separate site per physical store. Use post/zip code to redirect the customer to the relevant site. Show the products from the site navigation catalog.

答案： A,C

解題說明：

For Northern Trail Outfitters to ensure that only products available in a customer's closest physical store are shown:

* Option B is effective because it organizes inventory by store-specific categories, which can then be dynamically linked to a customer's location via their postal/zip code. This allows the system to filter search results based on the relevant category that corresponds to the closest store.

* Option D leverages separate pricebooks that are specific to each store, enabling product availability to be managed through price refinements. This method also uses the customer's zip code to activate the appropriate pricebook, ensuring that only products priced (and thus available) in the nearest store are displayed.

Both methods are scalable and integrate seamlessly with the existing infrastructure of the Salesforce B2C Commerce platform.

問題 #48

A Client has automated builds that deploy the code; however, recent builds started failing with compilation issues, which are not reproducible in developer's environment.

What first step needs to be taken to identify and fix the issue?

- A. Recreate the job in the build server to verify compilation issues.
- B. Verify the generated JavaScript and CSS for the build.
- C. Verify the modules versions used to generate the code.
- **D. Clean up build server work space and run job again.**

答案： D

解題說明：

When facing build failures that are not reproducible in developers' environments, a common and effective first step is to clean up the build server workspace (Answer A). This action clears any residual files, settings, or data that might be influencing the build process and causing discrepancies between local and server builds. By resetting the workspace to a clean state, it helps ensure that the build process is starting from a consistent base, potentially resolving issues caused by stale data or corrupted build artifacts. This step often resolves hidden configuration or environment-specific issues that are not immediately apparent in the code or module versions.

問題 #49

A new version of the Page Show controller is required for implementation of Page Designer specific look. It requires implementation of a specific, cache period for Page Designer pages, which is not currently available in the base Storefront Reference Architecture (SFRA) cache.js module. What two steps should the Architect instruct the developer to implement?

Choose 2 answers

- A. Create new Page.js controller in client's cartridge. Extend the code from base and prepend the new cache middleware function to Page-Show route.
- **B. Create new cache.js in client's cartridge. Extend cache.js from app_storefront_base and add a function for the Page Designer caching.**
- C. Create new cache.js in client's cartridge. Copy cache.js from app_storefront_base and add a function for the Page Designer caching.
- **D. Create new Page.js controller in client's cartridge. Copy code from base and modify the Page-Show route to include the new cache middleware function.**

答案： B,D

解題說明：

To implement a specific cache period for Page Designer pages in SFRA:

* Option A involves creating a new Page.js controller in the client's cartridge, where the existing Page-Show route can be modified to include a custom caching logic. This ensures that the specific caching requirements for Page Designer pages are met without altering the base functionality for other pages.

* Option D calls for extending the existing cache.js module in the client's cartridge to include a function specifically for Page Designer caching. This allows for reusing the existing caching logic while adding enhancements specific to the Page Designer pages, thus maintaining efficiency and clarity in the codebase.

Both options provide a clean, maintainable approach to customizing caching for specific requirements in SFRA, avoiding disruptions in other areas of the site functionality.

問題 #50

A B2C Commerce developer has implemented a job that connects to an SFTP, loops through a specific number of .csv files, and generates a generic mapping for every file. In order to keep track of the mappings imported, if a generic mapping is created successfully, a custom object instance is created with the .

csv file name. After running the job in the Development instance, the developer checks the Custom Objects in Business Manager and notices there isn't a Custom Object for each csv file that was on SFTP.

What are two possible reasons that some generic mappings were not created? Choose 2 answers

- **A. Invalid format in one or more of the .csv files.**
- B. The generic mappings definition needs to be replicated from Staging before running the job.
- **C. The maximum number of generic mappings was reached.**
- D. The job needs to run on Staging and then replicate the generic mappings and custom objects on Development

答案： A,C

解題說明：

Two plausible reasons for some generic mappings not being created despite the SFTP job running are: A) the system reached its limit for the maximum number of generic mappings allowed, and C) there was an invalid format in one or more of the .csv files processed. When the maximum threshold for mappings is reached, the system cannot create additional mappings, thus stopping any further imports from being registered as custom objects. Additionally, if .csv files are incorrectly formatted, the job would fail to create mappings for those files, leading to the absence of corresponding custom objects in Business Manager. It's crucial to ensure that file formats adhere to expected specifications and that system limits are adequately managed to avoid such issues.
