Professional-Cloud-Architect Study Practice Guide Give Customers Best Google Certified Professional - Cloud Architect (GCP) Exam Materials

BraindumpsVCE is a website to meet the needs of many customers. Some people who used our simulation test software to pass the IT certification exam to become a BraindumpsVCE repeat customers. BraindumpsVCE can provide the leading Google training techniques to help you pass Google Certification Professional-Cloud-Architect Exam.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q19-Q24):

NEW QUESTION # 19
You need to develop procedures to test a disaster plan for a mission-critical application. You want to use Google-recommended practices and native capabilities within GCP.
What should you do?

- A. Use gcloud scripts to automate service provisioning. Use Activity Logs monitor and debug your tests.
- B. Use Deployment Manager to automate provisioning. Use Stackdriver to monitor and debug your tests.
- C. Use automated scripts to automate service provisioning. Use Activity Logs monitor and debug your tests.
- D. Use Deployment Manager to automate service provisioning. Use Activity Logs to monitor and debug your tests.

Answer: D

NEW QUESTION # 20
Your company has announced that they will be outsourcing operations functions. You want to allow developers to easily stage new versions of a cloud-based application in the production environment and allow the outsourced operations team to autonomously promote staged versions to production. You want to minimize the operational overhead of the solution. Which Google Cloud product should you migrate to?

- A. Compute Engine
- B. App Engine
- C. Google Kubernetes Engine
- D. GKE On-Prem

Answer: B

Explanation:
Reference: https://cloud.google.com/security/compliance/eba-outsourcing-mapping-gcp

NEW QUESTION # 21
An application development team believes their current logging tool will not meet their needs for their new cloud-based product.
They want a better tool to capture errors and help them analyze their historical log data.
You want to help them find a solution that meets their needs.
What should you do?

- A. Direct them to download and install the Google StackDriver logging agent
- B. Send them a list of online resources about logging best practices
- C. Help them define their requirements and assess viable logging tools
- D. Help them upgrade their current tool to take advantage of any new features

Answer: A

Explanation:
The Stackdriver Logging agent streams logs from your VM instances and from selected third party software packages to Stackdriver Logging. Using the agent is optional but we recommend it. The agent runs under both Linux and Microsoft Windows.
Note: Stackdriver Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud Platform and Amazon Web Services (AWS). Our API also allows ingestion of any custom log data from any source. Stackdriver Logging is a fully managed service that performs at scale and can ingest application and system log data from thousands of VMs. Even better, you can analyze all that log data in real time.

NEW QUESTION # 22

Your company has a project in Google Cloud with three Virtual Private Clouds (VPCs). There is a Compute Engine instance on each VPC. Network subnets do not overlap and must remain separated. The network configuration is shown below.

Instance #1 is an exception and must communicate directly with both Instance #2 and Instance #3 via internal IPs. How should you accomplish this?

- A. Create two VPN tunnels via CloudVPN:
  * 1 between VPC #1 and VPC #2.
  * 1 between VPC #2 and VPC #3.
  Update firewall rules to enable traffic between the instances.
- B. Peer all three VPCs:
  * Peer VPC #1 with VPC #2.
  * Peer VPC #2 with VPC #3.
  Update firewall rules to enable traffic between the instances.
- C. Create a cloud router to advertise subnet #2 and subnet #3 to subnet #1.
- D. Add two additional NICs to Instance #1 with the following configuration:
  * NIC1
  * VPC: VPC #2
  * SUBNETWORK: subnet #2
  * NIC2
  * VPC: VPC #3
  * SUBNETWORK: subnet #3
  Update firewall rules to enable traffic between instances.

Answer: D

Explanation:
As per GCP documentation: "By default, every instance in a VPC network has a single network interface. Use these instructions to create additional network interfaces. Each interface is attached to a different VPC network, giving that instance access to different VPC networks in Google Cloud. You cannot attach multiple network interfaces to the same VPC network." Refer to:

https://cloud.google.com/vpc/docs/create-use-multiple-interfaces
https://cloud.google.com/vpc/docs/create-use-multiple-interfaces#i_am_not_able_to_connect_to_secondary_interfaces_internal_ip

NEW QUESTION # 23

Your marketing department wants to send out a promotional email campaign. The development team wants to minimize direct operation management. They project a wide range of possible customer responses, from
100 to 500,000 click-throughs per day. The link leads to a simple website that explains the promotion and collects user information and preferences. Which infrastructure should you recommend? (CHOOSE TWO)

- A. Use a single compute Engine virtual machine (VM) to host a web server, backed by Google Cloud SQL.
- B. Use a Google Container Engine cluster to serve the website and store data to persistent disk.
- C. Use a managed instance group to serve the website and Google Cloud Bigtable to store user data.
- D. Use Google App Engine to serve the website and Google Cloud Datastore to store user data.

Answer: C,D
