Sharing-and-Visibility-Architect Test Objectives

The Sharing-and-Visibility-Architect practice test software provides you the assistance to self-assess your progress. It helps you analyze the gradual improvement and notice the shortcomings while preparing Salesforce Sharing-and-Visibility-Architect through this format. The ability to customize your Salesforce Sharing-and-Visibility-Architect Practice Test time and the types of Salesforce Sharing-and-Visibility-Architect questions will turn your preparation into an easy affair.

Salesforce is a widely used customer relationship management software that helps organizations manage their customer interactions and data. As more and more companies adopt Salesforce, the need for skilled professionals to implement and manage the platform has grown significantly. One of the critical areas in Salesforce administration is sharing and visibility. Salesforce Sharing and Visibility Architect certification is designed to validate a professional's expertise in designing and implementing complex sharing and visibility solutions in Salesforce.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q59-Q64):

NEW QUESTION # 59

Universal Containers uses the standard Case object to track various support requests sent to servicing agents. Currently, the Case object has more than 400 fields. Eight different types of case processes have been established, each with a unique combination of statuses. The Director of Customer Service wants to ensure that servicing agents see only the required information specific to the case type they are addressing.

Which option is recommended to implement this requirement?

- A. Use Dynamic Forms with different field sections representing the relevant fields per case type, and control visibility of sections by Case Record Type value.
- B. Use a custom LWC to override the View action of the Case object, and a Custom Metadata Type to define the relevant fields per case type.
- C. Use different Page Layouts per case type, each representing the relevant fields per case type.

Answer: A

Explanation:

Dynamic Forms allow administrators to create page layouts with field visibility controlled at the section level based on record-specific criteria, such as the Case Record Type. This approach ensures servicing agents only see fields relevant to the specific case type, enhancing usability and performance.

* Option A (Correct): Dynamic Forms provide flexibility and scalability for managing field visibility dynamically without duplicating layouts.

* Option B: Using different Page Layouts is less efficient because managing and maintaining a separate layout for each case type is cumbersome with 400 fields and eight processes.

* Option C: A custom LWC adds complexity and development overhead, making it a less optimal solution for this scenario.

NEW QUESTION # 60

Universal Containers would like to restrict users' access to export reports. What option supports this requirement?

- A. Remove the "Export Reports" profile permission.
- B. Remove the "Report Manager" user permission.
- C. Remove "Allow Export" on the report folder settings.
- D. Remove the Export button from the report page layout.

Answer: D

Explanation:

Explanation

The option that supports this requirement is B. To restrict users' access to export reports, the administrator can remove the "Export Reports" user permission from their profile or permission set. The "Report Manager" user permission is not related to exporting reports, but to creating and managing report folders.

NEW QUESTION # 61

Universal Containers uses Person Accounts to represent retail customers and Business Accounts to represent commercial customers. The retail sales team should not have access to commercial customers but should have access to ALL retail customers. With the organization-wide default on Account set to Private, how should the architect meet these requirements?

- A. Create an owner-based sharing rule on AccountContactRelation to grant access to all account contact roles records owned by retail sales reps.
- **B. Create 2 criteria-based sharing rule giving the Retail Sales role access to Accounts of type PersonAccount.**
- C. Update the Retail Sales profile to grant access to Person Account record type.

Answer: B

Explanation:

To restrict access to only Person Accounts for the retail sales team while maintaining a private OWD:

* Option A (Correct): Create criteria-based sharing rules. These rules can be defined to share accounts of type PersonAccount with users in the Retail Sales role. This ensures they can only access retail customers (Person Accounts) and not Business Accounts.

* Option B: Sharing on AccountContactRelation does not provide direct access to accounts and is irrelevant to this requirement.

* Option C: Updating the profile to grant access to the Person Account record type does not align with the private OWD and does not manage access to records individually.

References:

* Criteria-Based Sharing Rules

NEW QUESTION # 62

Universal Containers uses Person Accounts to represent retail customers and Business Accounts to represent commercial customers. The retail sales team should not have access to commercial customers but should have access to ALL retail customers. With the organization-wide default on Account set to Private, how should the architect meet these requirements?

- A. Update the Retail Sales profile to grant access to Person Account record type.
- **B. Create 2 criteria-based sharing rule giving the Retail Sales role access to Accounts of type PersonAccount.**
- C. Create an owner-based sharing rule on AccountContactRelation to grant a@coess to all account contact roles records owned by retail sales reps.

Answer: B

NEW QUESTION # 63

Universal Containers has selected a small and diverse group of users to review inactive accounts. Given the Private sharing model, a public group was created and made available to this group of users. A sharing rule was created to make inactive accounts visible to the public group. However, some of these users are reporting they do not see any of the accounts that were shared with the public group.

What is the underlying issue for these users?

- A. The accounts are owned by users higher in the Role Hierarchy.
- B. The page layout assigned to these users is different than the Account owner.
- **C. The users are in profiles that have no access to the Account object.**

Answer: C

NEW QUESTION # 64
