OmniStudio 是一個功能強大的低代碼開發平台，可讓企業快速輕鬆地建立和定制應用程序。該平台提供了各種工具和功能，允許開發人員在不寫太多代碼的情況下創建複雜的應用程序。Salesforce OmniStudio-Developer 認證考試旨在測試開發人員對該平台的了解以及利用其功能創建自定義應用程序的能力。

最新的 Salesforce Developer OmniStudio-Developer 免費考試真題 (Q14-Q19):

問題 #14

Refer to the exhibit below.

What is the reason that the fields fail to display the fetched data?

- A. Lookup Mode is selected in the properties of the Type Ahead Block.
- B. Use Data JSON is Not selected in the properties of the Type Ahead Block.
- C. The typeHead key is not in the correct format.
- D. FirstName, LastName, and BirthDate are not placed inside the Type Ahead Block.

答案：B

解題說明：

The Use Data JSON property must be selected in the properties of the Type Ahead Block in order to display the fetched data in the fields. The Lookup Mode property is used to specify the type of lookup to perform. The FirstName, LastName, and BirthDate fields can be placed inside or outside the Type Ahead Block. The typeHead key is in the correct format.

問題 #15

A developer is configuring the API URL in an HTTP Action element within an Integration procedure. What is the merge code syntax for passing aDate node from an element named SetValues in the URL?

- A. x%SetValues.Date%
- B. ('Setvalues')['Date']
- C. {(SetValues. Date)}
- D. %SetValues Date

答案：C

解題說明：

The correct syntax for merge codes in Integration Procedure is {(NodeName)}, where NodeName is the name of the JSON node in the data source. The other options are either missing the parentheses or using incorrect symbols.

問題 #16

A developer needs to configure a calculation procedure to calculate the sum of the entire base price. What is the most efficient way for the developer to meet this requirement?

- A. Create a Preprocessor class to calculate the sum
- B. Add A Calculation Step as SUM (BasePrice).
- C. Add an Aggregation Step as SUM (BasePrice)
- D. Create a Postprocessor apex class to calculate the sum.

答案： C

解題說明：

Explanation

The Aggregation Step in a calculation procedure allows the developer to perform aggregate functions such as SUM, COUNT, MIN, MAX, and AVG on the output of a previous step. The developer can use this step to calculate the sum of the entire base price by specifying the field name and the aggregation function

問題 #17

A developer needs to limit the output of a Data Mapper Extract to a maximum of one result. How should the developer configure this?

- A. Define a formula with the Filter function.
- B. Use a Custom Output Type when creating the Data Mapper.
- C. Set the Limit property on the action that calls the Data Mapper Extract.
- D. Use the LIMIT filter on the Extract definition.

答案： C

解題說明：

According to the OmniStudio DataRaptor Extract documentation, if a developer wants to limit the number of records returned, the best way is to set the "Limit" property on the element or action that is calling the DataRaptor, such as in an Integration Procedure or OmniScript Action.

* A. Set the Limit property on the action that calls the Data Mapper Extract - This is the correct method. The calling context (e.g., OmniScript Action or Integration Procedure) includes a property for setting the limit on query results, which is a recommended and clean method to ensure only one record is retrieved.

Incorrect Options:

* B. There is no "LIMIT" clause within the DataRaptor Extract definition UI or JSON definition itself.

* C. Custom Output Type controls the structure, not the quantity of output.

* D. The Filter function applies conditional logic, not record count.

問題 #18

A developer writes an OmniScript that includes a DataRaptor that updates the Account status based on information provided from the OmniScript. The information must be updated only if the Account record already exists. Otherwise, a new account must be created.

How should the developer accomplish this task?

- A. Populate the Lookup Object and Lookup Fields
- B. Check the Upsert Key and Is Required for Upsert checkboxes on the Account Id field
- C. Check Overwrite Target for All Null Inputs checkbox on the Account Id field
- D. Check the Upsert Key checkbox on the Account Status field

答案： B

解題說明：

The Upsert Key checkbox indicates that the field is used as a key for upserting records. The Is Required for Upsert checkbox indicates that the field is mandatory for upserting records. The developer needs to check both checkboxes on the Account Id field to update the Account status only if the Account record already exists. Otherwise, a new account will be created.
