# Reliable Fortinet NSE8\_813 Dumps Pdf - NSE8\_813 Valid Practice Questions

In today's society, many enterprises require their employees to have a professional NSE8\_813 certification. It is true that related skills serve as common tools frequently used all over the world, so we can realize that how important an NSE8\_813 certification is, also understand the importance of having a good knowledge of it. The rigorous world force us to develop ourselves, thus we can't let the opportunities slip away. Being more suitable for our customers the NSE8\_813 Torrent question compiled by our company can help you improve your competitiveness in job seeking, and NSE8\_813 exam training can help you update with times simultaneously.

## Fortinet NSE 8 - Recertification Exam Sample Questions (Q78-Q83):

### NEW QUESTION # 78

Refer to the exhibit.

The screenshot displays the FortiManager interface. The top section shows four user profiles:

- admin**: Type: LOCAL, Profile: Super\_User, ADOMs: All ADOMs, Policy Packages: All Packages.
- CISO**: Type: LOCAL, Profile: Read\_Only\_User, ADOMs: All ADOMs, Policy Packages: All Packages.
- Mary**: Type: LOCAL, Profile: Standard\_User, ADOMs: All ADOMs, Policy Packages: All Packages.
- CTO**: Type: LOCAL, Profile: No\_Permission\_User, ADOMs: All ADOMs, Policy Packages: All Packages.

The bottom section shows the **Workspace Settings** for the **Workflow** mode. The **Workflow Approvals** table is as follows:

ADOM Name	Approvers	Email Notification
root	Group #1: CISO, admin	CTO
Workflow_72	Group #1: CISO, admin Group #2: CTO	Mary

The Company Corp administrator has enabled Workflow mode in FortiManager and has assigned approval roles to the current administrators. However, workflow approval does not function as expected. The CTO is currently unable to approve submitted changes. Given the exhibit, which two possible solutions will resolve the workflow approval problems with the Workflow\_72 ADOM?

(Choose two.)

- A. The CISO must have a higher access level than "Read\_Only\_User" in FortiManager.
- B. The CTO must have a defined email address for their admin user account.
- C. The CTO must have Standard access level or higher for FortiManager.
- D. The CTO and CISO need to swap Approval Groups so that the highest authority is in Group #1.
- E. The CTO needs to be added to "Email Notification" in the Workflow\_72 ADOM.

Answer: B,C

Explanation:

CTO Access Level: The CTO has the profile No\_Permission\_User, which likely restricts their ability to approve changes. To approve workflows, the CTO must have at least Standard\_User access or higher.

Email Notifications: Workflow approvals often rely on email notifications. If the CTO's email is missing or not configured, they may not receive approval notifications.

The CTO must have a defined email address for their admin user account.

Email notifications are essential for workflow approvals. Without a valid email address, the CTO would not be notified of approval requests.

The CTO must have Standard access level or higher for FortiManager.

The current No\_Permission\_User profile does not grant the CTO sufficient access to approve workflows. They need a higher permission level, such as Standard\_User.

### NEW QUESTION # 79

The FortiGate is an IPsec VPN hub. A VPN spoke protecting subnet 192.168.222.0/24 has successfully brought up a tunnel with the FortiGate.

This remote network is present in the FortiGate routing table as shown in the exhibit.

Which statement is true?

```
Exhibit

config vpn ipsec phase1-interface
edit "BranchOffice"
    set type dynamic
    set interface "wan1"
    set mode aggressive
    set proposal 3des-sha1 aes128-sha1
    set peertype one
    set peerid "BO_D2356"
    set psksecret ENC xxxxxxxx
next
end

config vpn ipsec phase2-interface
edit "BranchOffice_p2"
    set phase1name "BranchOffice"
    set proposal 3des-sha1 aes128-sha1
next
end

# get router info routing database | grep
192.168.222.0
S *> 192.168.222.0/24 [1/0] is directly connected,
BranchOffice_0, [0/0]
```

- A. The FortiGate administrator configured a static route for 192.168.222.0/24.
- B. The FortiGate administrator configured this subnet as a locally connected subnet on the "BranchOffice" phase1 interface.
- C. The route in the exhibit is bound to "BranchOffice\_0" which is a tunnel other than "BranchOffice".
- D. This subnet was learned during quick-mode negotiation and was dynamically injected into the routing table.

Answer: D

### NEW QUESTION # 80

A customer is experiencing problems with a legacy L3/L4 firewall device and the IPv6 SIP VoIP traffic. Their device is dropping

SIP packets, consequently, it cannot process SIP voice calls.  
Which solution will solve the customer's problem?

- A. Replace their legacy device with a FortiGate and deploy a FortiVoice to extract information from the body of the IPv6 SIP packet.
- B. Deploy a FortiVoice and enable an IPv6 SIP session helper.
- C. Deploy a FortiVoice and enable IPv6 SIP.
- D. Replace their legacy device with a FortiGate and configure it to extract information from the body of the IPv6 SIP packet.

**Answer: A**

#### NEW QUESTION # 81

You are running a diagnose command continuously as traffic flows through a platform with NP6 and you obtain the following output:

```
diag npu np6 dce 1
PDQ_OSW_EHP1 :0000000000001833 [5b]
diag npu np6 dce 1
PDQ OSW EHPI :0000000000000003 [80]
diag npu np6 dce 1
PDQ OSW EHP1 :0000000000000552 [94]
```

Given the information shown in the output, which two statements are true? (Choose two.)

- A. Enabling bandwidth control between the ISF and the NP will change the output
- B. There are packet drops at the XAUI
- C. The output is showing a packet descriptor queue accumulated counter
- D. Enable HPE shaper for the NP6 will change the output
- E. Host-shortcut mode is enabled

**Answer: B,C**

Explanation:

The diagnose command shown in the output is used to display information about NP6 packet descriptor queues. The output shows that there are 16 NP6 units in total, and each unit has four XAUI ports (XA0-XA3). The output also shows that there are some non-zero values in the columns PDQ ACCU (packet descriptor queue accumulated counter) and PDQ DROP (packet descriptor queue drop counter). These values indicate that there are some packet descriptor queues that have reached their maximum capacity and have dropped some packets at the XAUI ports. This could be caused by congestion or misconfiguration of the XAUI ports or the ISF (Internal Switch Fabric).

The output is showing a packet descriptor queue accumulated counter, which is a measure of the number of packets that have been dropped by the NP6 due to congestion. The counter will increase if there are more packets than the NP6 can handle, which can happen if the bandwidth between the ISF and the NP is not sufficient or if the HPE shaper is enabled. The output also shows that there are packet drops at the XAUI, which is the interface between the NP6 and the FortiGate's backplane. This means that the NP6 is not able to keep up with the traffic and is dropping packets.

#### NEW QUESTION # 82

The exhibit shows an explicit Web proxy configuration in a FortiGate device. The FortiGate is installed between a client with the IP address 172.16.10.4 and a Web server using port 80 with the IP address 10.10.3.4. The client Web browser is properly sending HTTP traffic to the FortiGate Web proxy IP address 172.16.10.254.

Which two sniffer commands will capture this HTTP traffic? (Choose two.)

- A. diagnose sniffer packet any 'host 172.16.10.4 and host 10.10.3.4' 3
- B. diagnose sniffer packet any 'host 172.16.10.4 and port 8080' 3
- C. diagnose sniffer packet any 'host 172.16.10.254 and host 10.10.3.4' 3
- D. diagnose sniffer packet any 'host 172.16.10.4 and host 172.16.10.254' 3

**Answer: C,D**

Explanation:

Sniffer should run between webproxy to webserver

And also Sniffer between client machine to web proxy connectivity as it is in explicit mode.
