EAEP2201 Valid Test Prep, Examinations EAEP2201 Actual Questions

The TestkingPass wants you make your Esri EAEP2201 exam questions preparation journey simple, smart, and successful. To do this the TestkingPass is offering real, valid, and updated Esri EAEP2201 exam practice questions in three different formats. These formats are TestkingPass EAEP2201 PDF Questions files, desktop practice test software, and web-based practice test software. With any EAEP2201 exam questions format you will get everything that you need to prepare and pass the difficult Esri EAEP2201 certification exam with flying colors.

Esri EAEP2201 (Enterprise Administration Professional 2201) Certification Exam is a comprehensive assessment of an individual's knowledge and skills in the field of enterprise administration using Esri technology. EAEP2201 exam is designed for professionals who have experience in administering enterprise ArcGIS systems and are looking to validate their expertise. It is a globally recognized certification that demonstrates proficiency in enterprise administration, and successful completion of the exam demonstrates that the individual has the knowledge and skills required to manage complex, large-scale ArcGIS installations.

Esri Enterprise Administration Professional 2201 Sample Questions (Q18-Q23):

NEW QUESTION # 18

A GIS administrator must configure ArcGIS Server so that only specific groups and roles from the identity store can administer it. Which action should the administrator perform?

- A. Define the shared key used to generate an ArcGIS token
- B. Configure role-based access through the ArcGIS Server Manager
- C. Use a group-managed service account to administer the server
- **D. Disable the primary administrator account**

Answer: D

Explanation:

The primary site administrator account in ArcGIS Server is a built-in account that bypasses external identity store configurations. To ensure only users from a configured identity store (e.g., Active Directory) can administer the site, the primary site admin account must be disabled after alternative administrative access has been confirmed.

From ArcGIS Server documentation:

"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."

* Option B relates to token security, not access control.

* Option C is about running the service securely, not defining user permissions.

Reference: ArcGIS Enterprise - Managing Access Using Identity Stores and Disabling the Primary Site Administrator Account

NEW QUESTION # 19

An organization must limit the users who can publish services that reference data in a user-managed database.

At the same time, all users must be able to access and edit the data in that user-managed data store.

How should the database be registered?

- **A. As an ArcGIS-managed data store in Server Manager**
- B. As a relational data store in ArcGIS Data Store
- C. As a data store item in the ArcGIS Enterprise portal

Answer: A

Explanation:

Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.

Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.

Reference Source: ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.

NEW QUESTION # 20

A client requires an ArcGIS Server site that provides the following capabilities

* Serve several cached image services Each service is published from a single raster and updated once a year with new imagery from which a new cache is generated offline before publishing

* Serve a dynamic feature class of 1,000 points coming from a PostgreSQL enterprise geodatabase Which licensing role does the client need for this ArcGIS Server site?

- A. Image Server
- B. GIS Server
- C. Mission Server

Answer: A

NEW QUESTION # 21

A GIS administrator is analyzing the usage statistics of ArcGIS Enterprise. The administrator needs to pull tabular statistics on various groups and users about the type of content that they produce and consume. Which action should the administrator perform?

- A. Open ArcGIS Server statistics to create a report for commonly used items.
- B. Use ArcGIS Monitor to capture desired information over a period of time in a report.
- C. Run usage reports in Portal for ArcGIS to determine the effect on the organization.

Answer: C

Explanation:

Portal for ArcGIS provides built-in usage reports that allow administrators to monitor how members are using, sharing, and contributing resources. These reports offer insights into content creation, usage patterns, and group activities. Administrators can generate and export these reports in tabular formats for further analysis.

ArcGIS Server statistics focus on service-level metrics and do not provide detailed user or group content statistics. ArcGIS Monitor captures system performance metrics but is not designed for detailed content usage analysis by users or groups.

Reference Source: ArcGIS Enterprise documentation on usage reports in Portal for ArcGIS.

NEW QUESTION # 22

A GIS administrator is setting up a distributed collaboration between an ArcGIS Online organization and an ArcGIS Enterprise organization for a data validation project. Users from a second ArcGIS Online org will also participate. What should the administrator set up?

- A. Enable data sharing with public access
- B. A collaboration between ArcGIS Online and ArcGIS Enterprise and then add users from the second ArcGIS Online org to the common group
- C. Multiple collaborations between the ArcGIS Enterprise organization and multiple ArcGIS Online organizations
- D. One collaboration with all three organizations: ArcGIS Enterprise and two ArcGIS Online orgs

Answer: C

Explanation:

A distributed collaboration in ArcGIS Enterprise is designed to operate between two organizations only.

Therefore, to collaborate with two separate ArcGIS Online organizations, the administrator must create separate collaborations between the Enterprise org and each ArcGIS Online org.

From Esri documentation:

"Each collaboration is established between two organizations. To collaborate with multiple organizations, you must set up multiple one-to-one collaborations."

* Option B is incorrect because adding external users from other orgs to a group doesn't extend collaboration capabilities.

* Option C is not supported - collaborations are strictly between two parties.

Reference: ArcGIS Enterprise - Distributed Collaboration Limitations and Multi-Org Setup
