- A. Hyperlink
- B. Single-Select Enum
- **C. Flex Master Data-based field**
- D. Computed Field

Answer: C

Explanation:

The Flex Master Data (FMD)-based field type supports dynamic lists sourced from CSV uploads. FMD fields act like advanced picklists that can contain thousands of values, imported via CSV templates defining the master data structure and entries. These fields are searchable, scalable, and ideal for large or frequently changing datasets.

Single-select enumerations are static lists manually defined and cannot import large CSV datasets. Computed fields calculate values dynamically based on expressions and are not designed for listing selectable values.

Hyperlink fields store URLs, unrelated to selection lists.

FMD fields are the preferred approach when a customer requires large or frequently updated lookup lists in sourcing projects or contracts.
