How to earn ACSA credential?

The candidate must earn 40 continuing education units (CEUs) for the ACSA credential. The CEUs may be earned through participation in the ISSA-certified training course, obtaining CEUs from any other Information Systems Security Association (ISSA) member, obtaining certification credits for passing the exam, or through participating in many other online sites.

The Associate level requires passing one exam to achieve. The ACSA credential is defined as conforming to the requirements of NCEES, the American Society for Testing and Materials (ASTM), and the International Information Systems Security Certification Consortium (ISC). Passing this exam does not qualify a candidate for any CISSP Certification nor does it make an individual eligible for any other ISC credential. The Associate level of certification requires passing one exam to achieve. The ACSA credential is

defined as conforming to the requirements of NCEES, the American Society for Testing and Materials (ASTM), and the International Information Systems Security Certification Consortium (ISC). The test will not earn a CISSP valid certification.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1316-Q1321):

NEW QUESTION # 1316

Information pruning reflects which of the following security principles?

- A. Separation of Duties (SD)
- B. Need-to-know
- C. Defense in depth
- **D. Least privilege**

Answer: D

NEW QUESTION # 1317

Which access control method allows the data owner (the person who created the file) to control access to the information they own?

- A. MAC - Mandatory Access Control
- **B. DAC - Discretionary Access Control**
- C. RBAC - Role-Based Access Control
- D. NDAC - Non-Discretionary Access Control

Answer: B

Explanation:

DAC - Discretionary Access Control is where the user controls access to the data they create or manage.

It is the least secure method of access control because of a few factors:

-Employee changeover can lead to confusion of data ownership or abandoned data.

-Employees are not traditionally experienced enough to manage data permissions and maintain them in a reliable fashion.

-People in general are the least reliable component of any organization. The following answers are incorrect:

-MAC - Mandatory Access Control: This is incorrect because in the MAC model of access control, labels are used to identify the level of sensitivity of the data. If the user does not have privileges to such data he or she is denied access.

-RBAC - Role-Based Access Control: Sorry, RBAC is Role-Based Access Control where the users' Role determines the access level to data they are given.

-NDAC - Non-Discretionary Access Control: Sorry, this isn't a common term associated with access control methodologies.

NEW QUESTION # 1320

When continuous availability (24 hours-a-day processing) is required, which one of the following provides a good alternative to tape

backups?

- A. Daily archiving
- **B. Backup to jukebox**
- C. Optical disk backup
- D. Disk mirroring

Answer: B

Explanation:

Hierarchical Storage Management (HSM). HSM provides continuous on-line backup by using optical or tape 'jukeboxes,' similar to WORMs. It appears as an infinite disk to the system, and can be configured to provide the closest version of an available real-time backup. This is commonly employed in very large data retrieval systems." Pg. 71 Krutz: The CISSP Prep Guide.
