So we try our best to extend our dumps, and our VCE4Dumps elite comprehensively analyze the dumps so that you are easy to use it. Besides, we provide one-year free update service to guarantee that the Sharing-and-Visibility-Architect Exam Materials you are using are the latest.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q19-Q24):

NEW QUESTION # 19

Universal Containers (UC) uses a custom Visualforce page to display shipment tracking information (custom object, private OWD) to field manager and agents. The IT team wants to make sure that users have access to only the information that is allowed. Which Apex method must be used to make sure only allowed fields are shown to the users?

- A. isReadable()

- B. isAccessible()
- C. isViewable()
- D. isShowable()

Answer: B

NEW QUESTION # 20

Universal Containers (UC) has a partner community for its 200 distributors.

UC customer accounts are assigned an individual distributor. The organization-wide default setting for the custom Delivery object is Private.

How should an architect advise UC to grant all users at a distributor access to delivery records for all customers assigned to a particular distributor?

- A. Create a Sharing Set for the Distributor profile to grant access to the Delivery object.
- B. Create 2 criteria-based sharing rule that shares delivery records matching the Distributor to users of a Public Group created for the distributor.
- C. Create a criteria based sharing rule that shares delivery records matching a distributor to the Distributor role in the Role Hierarchy.

Answer: A

Explanation:

* Sharing Sets in Partner Communities:

* Sharing Sets allow sharing of records with users in specific profiles, based on a common field value between the user and the record.

* Why Option C is Correct:

* A Sharing Set can be configured to grant access to Delivery records where the distributor matches a custom field on the record. This is a scalable solution for partner communities.

* Why Others Are Incorrect:

* Option A: Role Hierarchies are limited to three levels for partner users, and this approach does not scale well for 200 distributors.

* Option B: Using two sharing rules adds unnecessary complexity and may not handle all scenarios effectively.

For details on Sharing Sets, see Salesforce Partner Community Sharing documentation: <https://help.salesforce.com/>

NEW QUESTION # 21

Which method should be used to grant an unrelated group of users access to a set of records?

- A. Role Hierarchy
- B. Public Groups
- C. Sharing Sets

Answer: B

Explanation:

Public Groups are the most flexible method to grant access to an unrelated group of users. Public Groups can include individual users, roles, and roles with subordinates, allowing for granular control over which users gain access to records. Sharing sets and role hierarchies are less suitable because they rely on predefined relationships, such as account ownership or role-based hierarchies, which may not apply to unrelated users.

By leveraging Public Groups, administrators can define and manage record-level sharing without requiring additional custom logic. (help.salesforce.com)

NEW QUESTION # 22

Sales manager at universal containers (UC) have requested viewing customer invoices in Salesforce. Invoice data is mastered in the ERP system. The architect at UC decided to surface the customer invoices in salesforce using external objects and did the following:

-Configured an external object called Invoice.

-Created a lookup relationship between account and the invoice.

How can the architect grant the sales managers access to the customer invoices data?

- A. By creating manual sharing to share invoices with relevant sales managers.
- B. By creating a sharing set to share invoices with users in sales manager role.
- **C. By creating controlling the invoices object permission on the sales manager's profile.**
- D. By creating sharing rules to share the invoices records with users in sales managers roles.

Answer: C

Explanation:

Explanation

Controlling the invoices object permission on the sales manager's profile is how the architect can grant the sales managers access to the customer invoices data. Object permissions determine whether a user can create, read, edit, or delete any record of that object. Since invoice data is surfaced in Salesforce using external objects, sales managers need to have at least read permission on the invoice object to view the customer invoices data. Option A is incorrect, since sharing rules are not available for external objects. Option B is incorrect, since manual sharing is not available for external objects. Option D is incorrect, since sharing sets are not available for external objects.

NEW QUESTION # 23

Universal Containers has requirement for the Architect to develop Apex Managed Sharing code for the custom Job object. The sharing settings for the Job object are set to Private.

When assigning access level for the record, which two lines of code will cause a DML exception on insert to the database?

Choose 2 answers

- A. `Objectname.AccessLevel='Edit'`
- B. `Objectname.AccessLevel='Read'`
- **C. `Objectname.AccessLevel='All'`**
- **D. `Objectname.AccessLevel='None'`**

Answer: C,D

Explanation:

Explanation

When assigning access level for a record using Apex Managed Sharing, you can only use 'Read' or 'Edit' values. Using 'All' or 'None' values will cause a DML exception on insert to the database.

NEW QUESTION # 24
