As a responsible company, we don't ignore customers after the deal, but will keep an eye on your exam situation. Although we can assure you the passing rate of our SPLK-2003 training guide nearly 100 %, we can also offer you a full refund if you still have concerns. So you have nothing to worry about, only to study with our SPLK-2003 Exam Questions with full attention. And as we have been in this career for over ten years, our SPLK-2003 learning materials have became famous as a pass guarantee.

The software version is one of the three versions of our SPLK-2003 exam prep. The software version has many functions which are different with other versions'. On the one hand, the software version of SPLK-2003 test questions can simulate the real examination for all users. By actually simulating the test environment, you will have the opportunity to learn and correct self-shortcoming in study course. On the other hand, although you can just apply the software version in the windows operation system, the software version of SPLK-2003 Exam Prep will not limit the number of your computer. If you use the software version, you can download the app more than one computer, but you can just apply the software version in the windows operation system. We believe the software version of our SPLK-2003 test torrent will be very useful for you, we hope you can pass you exam and get your certificate successfully.

New SPLK-2003 Test Sample | New SPLK-2003 Dumps Pdf

Our Splunk Phantom Certified Admin exam questions are totally revised and updated according to the changes in the syllabus and the latest developments in theory and practice. And the study materials are based on the past years of the exam really and industry trends through rigorous analysis and summary. We carefully prepare the SPLK-2003 test guide for the purpose of providing high-quality products. All the revision and updating of products can graduate the accurate information about the SPLK-2003 Guide Torrent you will get, let the large majority of student be easy to master and simplify the content of important information. Our product SPLK-2003 test guide delivers more important information with fewer questions and answers, in order to easy and efficient learning.

Splunk Phantom Certified Admin Sample Questions (Q116-Q121):

NEW QUESTION # 116
A user wants to use their Splunk Cloud instance as the external Splunk instance for Phantom. What ports need to be opened on the Splunk Cloud instance to facilitate this? Assume default ports are in use.

- A. Splunk Cloud is not supported.
- B. TCP 8080 and TCP 8191.
- C. TCP 80 and TCP 443.
- D. TCP 8088 and TCP 8099.

Answer: B

NEW QUESTION # 117
Which of the following is a best practice for use of the global block?

- A. Import packages which will be used within the playbook.
- B. Execute code at the beginning of each run of the playbook.
- C. Declare outputs which will be selectable within playbook blocks.
- D. Execute custom code after each run of the playbook.

Answer: A

Explanation:
The global block within a Splunk SOAR playbook is primarily used to import external packages or define global variables that will be utilized across various parts of the playbook. This block sets the stage for the playbook by ensuring that all necessary libraries, modules, or predefined variables are available for use in subsequent actions, decision blocks, or custom code segments within the playbook. This practice promotes code reuse and efficiency, enabling more sophisticated and powerful playbook designs by leveraging external functionalities.

NEW QUESTION # 118
Why does SOAR use wildcards within artifact data paths?

- A. To make decision execution in playbooks run faster.
- B. To make data access in playbooks easier.
- C. To make playbooks filter out nulls.
- D. To make playbooks more specific.

Answer: B

Explanation:
Wildcards are used within artifact data paths in Splunk SOAR playbooks to simplify the process of accessing data. They allow playbooks to reference dynamic or variable data structures without needing to specify exact paths, which can vary between artifacts. This flexibility makes it easier to write playbooks that work across different events and scenarios, without hard-coding data paths. SOAR uses wildcards within artifact data paths to make data access in playbooks easier. A data path is a way of specifying the location of a piece of data within an artifact. For example, artifact.cef.sourceAddress is a data path that refers to the source address field of the artifact. A wildcard is a special character that can match any value or subfield within a data path. For example, artifact.*.cef.sourceAddress is a data path that uses a wildcard to match any field name before the cef subfield. This allows the playbook to access the source address data regardless of the field name, which can vary depending on the app or source that generated the artifact. Therefore, option C is the correct answer, as it explains why SOAR uses wildcards within artifact data paths. Option A is incorrect, because wildcards do not make playbooks more specific, but more flexible and adaptable. Option B is

incorrect, because wildcards do not make playbooks filter out nulls, but match any value or subfield. Option D is incorrect, because wildcards do not make decision execution in playbooks run faster, but make data access in playbooks easier.
1: Understanding datapaths in Administer Splunk SOAR (Cloud)

NEW QUESTION # 119
How can the DECIDED process be restarted?

- A. In Administration > Server Settings.
- B. By restarting the playbook daemon.
- C. On the System Health page.
- D. By restarting the automation service.

Answer: D

Explanation:
DECIDED process is a core component of the SOAR automation engine that handles the execution of playbooks and actions. The DECIDED process can be restarted by restarting the automation service, which can be done from the command line using the service phantom restart command2. Restarting the automation service also restarts the playbook daemon, which is another core component of the SOAR automation engine that handles the loading and unloading of playbooks3. Therefore, option D is the correct answer, as it restarts both the DECIDED process and the playbook daemon. Option A is incorrect, because restarting the playbook daemon alone does not restart the DECIDED process. Option B is incorrect, because the System Health page does not provide an option to restart the DECIDED process or the automation service. Option C is incorrect, because the Administration > Server Settings page does not provide an option to restart the DECIDED process or the automation service.
In Splunk SOAR, if the DECIDED process, which is responsible for playbook execution, needs to be restarted, this can typically be done by restarting the automation (or phantom) service. This service manages the automation processes, including playbook execution. Restarting it can reset the DECIDED process, resolving issues related to playbook execution or process hangs.

NEW QUESTION # 120
Which Phantom API command is used to create a custom list?

- A. phantom.new_list()
- B. phantom.create_list()
- C. phantom.include_list()
- D. phantom.add_list()

Answer: D

NEW QUESTION # 121
