PDF 200-201 Cram Exam - 100% 100% Pass-Rate Questions Pool

For one thing, the most advanced operation system in our company which can assure you the fastest delivery speed on our 200-201 exam questions. For another thing, with the online app version of our 200-201 actual exam, you can just feel free to practice the questions in our 200-201 Training Materials on all kinds of electronic devices. In addition, under the help of our 200-201 exam questions, the pass rate among our customers has reached as high as 98% to 100%. We are look forward to become your learning partner in the near future.

Cisco 200-201 exam consists of 100 multiple-choice questions and has a time limit of 120 minutes. 200-201 exam is designed to test an individual's knowledge and skills in the areas of security concepts, security monitoring, host-based analysis, network intrusion analysis, and security policies and procedures. 200-201 Exam is available in English and Japanese and can be taken at any Pearson VUE testing center.

Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample

Questions (Q156-Q161):

NEW QUESTION # 156

What is an attack surface as compared to a vulnerability?

- A. the individuals who perform an attack
- B. an exploitable weakness in a system or its design
- C. any potential danger to an asset
- D. the sum of all paths for data into and out of the environment

Answer: B

Explanation:

An attack surface is the total sum of vulnerabilities that can be exploited to carry out a security attack. Attack surfaces can be physical or digital. The term attack surface is often confused with the term attack vector, but they are not the same thing. The surface is what is being attacked; the vector is the means by which an intruder gains access.

NEW QUESTION # 157

A security expert is working on a copy of the evidence, an ISO file that is saved in CDFS format. Which type of evidence is this file?

- A. CD data copy prepared in Windows
- B. CD data copy prepared in Mac-based system
- C. CD data copy prepared in Android-based system
- D. CD data copy prepared in Linux system

Answer: A

Explanation:

The CDFS (Compact Disc File System) format is associated with the ISO 9660 standard, which is a file system for optical disc media. It is commonly used in Windows systems for CDs. When a security expert works on an ISO file saved in CDFS format, it typically indicates that the data was prepared or copied using a Windows-based system. This is because CDFS is the file system that Windows uses to read and write CDs, and the ISO file is an image of that CD data1.

NEW QUESTION # 158

Which event is user interaction?

- A. opening a malicious file
- B. reading and writing file permission
- C. executing remote code
- D. gaining root access

Answer: A

Explanation:

User interaction is any event that requires the user to perform an action that enables or facilitates a cyberattack. Opening a malicious file is an example of user interaction, as it can trigger the execution of malicious code or malware that can compromise the system or network. Gaining root access, executing remote code, and reading and writing file permissions are not user interactions, but rather actions that can be performed by an attacker after exploiting a vulnerability or bypassing security controls. NEW QUESTION # 159

During which phase of the forensic process is data that is related to a specific event labeled and recorded to preserve its integrity?

- A. collection

- B. reporting
- C. investigation
- D. examination

Answer: A

Explanation:

During the collection phase of the forensic process, data related to a specific event is labeled and recorded to preserve its integrity. This step ensures that the data remains unaltered and authentic from the time of collection until it is presented as evidence, maintaining the chain of custody. NEW QUESTION # 160

Which type of evidence supports a theory or an assumption that results from initial evidence?

- **A. corroborative**
- B. indirect
- C. best
- D. probabilistic

Answer: A

Explanation:

Corroborating evidence (or corroboration) is evidence that tends to support a theory or an assumption deduced by some initial evidence. This corroborating evidence confirms the proposition. Cisco CyberOps Associate CBROPS 200-201 Official Cert Guide
