KoreaDumps의 Zscaler인증 ZDTE시험덤프자료는 IT인사들의 많은 찬양을 받아왔습니다. 이는 KoreaDumps의 Zscaler인증 ZDTE덤프가 신뢰성을 다시 한번 인증해주는 것입니다. Zscaler인증 ZDTE시험덤프의 인기는 이 시험과목이 얼마나 중요한지를 증명해줍니다. KoreaDumps의 Zscaler인증 ZDTE덤프로 이 중요한 IT인증시험을 준비하시면 우수한 성적으로 시험을 통과하여 인정받는 IT전문가로 될 것입니다.

거침없이 발전해나가는 IT업계에서 자신만의 자리를 중요하지 않고 단단히 지킬려면 Zscaler인증 ZDTE시험은 무조건 패스해야 합니다. 하지만 Zscaler인증 ZDTE시험패스는 하늘에 별따기 만큼 어렵습니다. 시험이 영어로 출제되어 공부자료 마련도 좀 힘든편입니다. 여러분들의 고민을 덜어드리기 위해 KoreaDumps에서는 Zscaler인증 ZDTE시험의 영어버전 실제문제를 연구하여 실제시험에 대비한 영어버전 Zscaler인증 ZDTE덤프를 출시하였습니다. 전문적인 시험대비자료이기에 다른 공부자료는 필요없이 KoreaDumps에서 제공해드리는 Zscaler인증 ZDTE영어버전덤프만 공부하시면 자격증을 딸수 있습니다.

>> ZDTE완벽한 인증자료 <<

ZDTE인증덤프 샘플체험 - ZDTE인증자료

IT인증 시험에 도전해보려는 분들은 회사에 다니는 분들이 대부분입니다. 승진을 위해서나 연봉협상을 위해서나 자격증 취득은 지금 시대의 필수입니다. KoreaDumps의 Zscaler인증 ZDTE덤프는 회사다니느라 바쁜 나날을 보내고 있는 분들을 위해 준비한 시험준비공부자료입니다. KoreaDumps의 Zscaler인증 ZDTE덤프를 구매하여 pdf버전을 공부하고 소프트웨어버전으로 시험환경을 익혀 시험보는게 두렵지 않게 해드립니다. 문제가 적고 가격이 저렴해 누구나 부담없이 애용 가능합니다. KoreaDumps의 Zscaler인증 ZDTE덤프를 데려가 주시면 기적을 안겨드릴게요.

최신 Digital Transformation Engineer ZDTE 무료샘플문제 (Q30-Q35):

질문 # 30

Which protocol allows users to configure a passwordless authentication method for their ZIdentity account?

- A. FIDO2
- B. OIDC
- C. SAML
- D. SCIM

정답: A

설명:

Zscaler Identity (ZIdentity) supports modern, phishing-resistant passwordless authentication using the FIDO2 standard. FIDO2 combines Web Authentication (WebAuthn) and the Client to Authenticator Protocol (CTAP2) to enable users to authenticate with security keys or built-in platform authenticators (such as biometric sensors) without transmitting or storing a reusable password. The Digital Transformation Engineer documentation explains that when a user registers a FIDO2 authenticator with ZIdentity, the service

stores a public key tied to that device and account. Future logins are validated using a cryptographic challenge-response, providing strong protection against credential theft and replay attacks.

By contrast, SAML (option B) and OIDC (option C) are federation protocols used for single sign-on (SSO) and identity delegation between an identity provider and service providers; they do not themselves define how passwordless authentication is performed. They can carry assertions from an IdP that might use FIDO2 behind the scenes, but SAML and OIDC are not the passwordless method. SCIM (option D) is a provisioning standard for creating, updating, and deprovisioning identities and groups, not an authentication protocol.

Therefore, the only option that directly represents the protocol enabling passwordless login to a ZIdentity account is FIDO2.

질문 # 31

Which type of sensitive information can be protected using OCR (Optical Character Recognition) technology?

- A. Software licenses
- B. Financial transactions
- **C. Personally Identifiable Information (PII)**
- D. Network configurations

정답: C

설명:

Zscaler's Data Protection platform integrates Optical Character Recognition (OCR) into its inline Data Loss Prevention (DLP) capabilities. OCR enables Zscaler to extract text embedded within images—such as screenshots, scanned documents, or photos of forms—and subject that text to the same DLP inspection engines that normally analyze plain text content.

Once OCR has converted image content into text, Zscaler can apply predefined dictionaries, custom dictionaries, and advanced classifiers to detect sensitive data types, including personally identifiable information (PII) such as national ID numbers, passport numbers, addresses, or other regulated personal data. This is crucial because many data leaks occur via screenshots or scanned documents that traditional, text-only DLP engines would miss.

While OCR could, in theory, detect patterns related to network configurations, software licenses, or financial transactions, Zscaler's training and exam materials emphasize its use to protect sensitive data in images—especially user-related regulated data such as PII and other compliance-relevant information. Network configurations and software licenses are better addressed through configuration management and IP protection policies, and "financial transactions" describes activities rather than a specific information pattern. Therefore, Personally Identifiable Information (PII) is the best and most exam-accurate answer for the type of sensitive information protected using OCR.

질문 # 32

Which statement is true about ZIA SD-WAN integrations using APIs?

- A. Locations created by the SD-WAN API integrations will not be editable in the Zscaler ZIA Admin interface.
- **B. You must enter the "SD-WAN Partner Key" under Administration > Cloud Service API Key Management.**
- C. SD-WAN API integrations can support both GRE and IPsec tunnel types.
- D. The SD-WAN partner must send an API key and credentials to the Zscaler administrator.

정답: B

설명:

For SD-WAN API integrations with Zscaler Internet Access (ZIA), the control point for establishing trust and enabling automation is the Cloud Service API configuration within the ZIA admin portal. As documented in Zscaler's SD-WAN and Cloud Service API workflow, the ZIA administrator navigates to the Cloud Service API (under Administration) and configures the SD-WAN integration by generating and managing the SD-WAN Partner Key there. This key is then used by the SD-WAN orchestrator or controller to authenticate against Zscaler's APIs and to automate the creation of locations and tunnels.

The key is not provided by the SD-WAN partner; rather, it is created and controlled by the customer's ZIA admin, which makes option D incorrect. Locations and tunnels created via the integration remain visible and generally manageable within the ZIA admin interface, so option B is incorrect. While SD-WAN integrations can automate both GRE and IPsec tunnels in many deployments, that behavior depends on the specific SD-WAN vendor and design, so the blanket statement in option A is not the definitive, document-aligned fact being tested.

질문 # 33

The Zscaler for Users - Engineer (EDU-202) learning path consists of various solutions covered in eleven courses. Which of the following topics is out of scope for the Zscaler for Users - Engineer learning path?

- A. Configuration of ZDX for applications, call quality monitoring, probes, diagnostics, alerts, and role-based administration to ensure effective SaaS and web application monitoring.
- **B. Enabling versions to control which version (if any) of Zscaler Client Connector is available when end users manually update the app or when you configure automatic app updates.**
- C. Exploring Intrusion Prevention System, DNS Control, Tenant Restrictions, and secure application segmentation.
- D. In-depth overview of Zscaler's architecture platform, including its global scale, additional capabilities, and API infrastructure.

정답: B

설명:

Official EDU-202 materials describe the Engineer path as focusing on advanced architecture, connectivity, platform, access control, cyberthreat protection, data protection, risk management, ZDX, and Zero Trust Automation. The published learning outcomes explicitly include: discussing the architecture of the Zscaler platform and its API infrastructure; configuring advanced connectivity options; and configuring advanced cybersecurity services and Zscaler Digital Experience (ZDX)-including application monitoring, call quality, probes, diagnostics, alerts, and role-based administration. These map directly to options A, C, and D, which align to Zscaler Architecture, Cyberthreat/Access Control Services (IPS, DNS Control, Tenant Restrictions, segmentation), and ZDX content in the EDU-202 outline.

By contrast, Client Connector App Store "version enablement" and controlling which build is available when users manually or automatically update the app is documented as an administration task in the Client Connector help and is typically taught in the Essentials/Administrator (EDU-200) path, not in the Engineer path. Those materials show how to use the App Store to enable builds and control available versions, positioning it as operational client management rather than an advanced Engineer-level topic. Consequently, option B is considered out of scope for EDU-202 in the ZDTE context.

Top of Form

질문 # 34

When using a Domain Joined posture element to allow access in a ZPA Access Policy, which statement is true?

- A. Only some Linux operating systems have Domain Joined posture profile support in Zscaler.
- B. If a 2nd domain and a sub-domain are needed in the Access Policy rule you must create a 2nd posture profile with the other domain and add it to the Access Policy.
- C. Zscaler ZPA can contact the IDP such as Azure AD out-of-band to verify if a device is joined to a particular domain.
- **D. When a ZPA Browser Access client attempts to access an application, Zscaler can determine if that device is joined to a particular domain.**

정답: D

설명:

The Domain Joined posture element in ZPA evaluates whether a device belongs to a specific Active Directory domain. ZPA performs this evaluation using the device's local posture signals, either through the Zscaler Client Connector posture engine or through the browser-based posture evaluation framework used in ZPA Browser Access. When a user connects via Browser Access, ZPA can still determine domain membership by inspecting the allowed browser posture attributes provided by the endpoint, enabling device-based Zero Trust controls without requiring a full Client Connector installation.

Linux endpoints do not support domain-joined posture verification, making option A incorrect. Domain join validation is performed at the device level, not through the Identity Provider, because IdPs validate users, not device domain status, eliminating option D. ZPA's posture configuration allows you to define multiple domains within a single posture profile, so creating a second posture profile is unnecessary, making option C incorrect.

Therefore, the correct statement is that ZPA Browser Access can determine whether the device is joined to the specified domain, which aligns with the expected behavior of the domain-joined posture element.

질문 # 35
