NEW QUESTION # 52
Due to confidentiality reasons, when the HR Business Partner (maintained in Job Relationship) is creating a change in salary for an employee, this action will need to be approved by the manager of the HR Business Partner creating the request.
How do you define this in the workflow when filling in the Approver Type, Approver Role, Context, and Relationship to Approver?
Refer to the screenshot to answer the question

- A. By selecting in Step 1: Role - Employee HR-Source- Initiator
- B. By selecting in Step 1: Role - Employee HR - Source - Employee
- C. By selecting in Step 1:Role - Self-Source - Initiator
- D. By selecting in Step 1: Role - Manager - Source - Initiator

Answer: D

Explanation:
To ensure that the salary change initiated by the HR Business Partner is approved by their manager, you need to configure the workflow with the following details:
* Approver Type: Manager
* Approver Role: Manager
* Context: Initiator (this ensures the approval request is routed to the manager of the person initiating the workflow).
* Relationship to Approver: From the initiator's position, the system derives the relationship to their manager.

SelectingRole: Manager - Source: Initiatorin Step 1 aligns with these requirements.
Scenario 2: Approvals for Self-Service

NEW QUESTION # 53

The employee is changing their marital status. Once the workflow is approved, the manager gets a notification via e-mail that this change has been processed. The manager then goes into the system and checks the workflow, but notices that they can see more fields than the ones for which they should receive a notification (Name, Marital Status, and Nationality) Why is that?

- A. The manager's approver context is set to Source
- B. In the workflow, Respect Permissions was set to No for the notification line to the manager.
- C. There is a rule that sets up the visibility for the fields in Personal Information and this applies when checking the workflow.
- D. The manager has transactions pending approval permission for Personal Information.

Answer: B

Explanation:
When the manager can view more fields than they should, it is typically because in the workflow configuration, the Respect Permissions setting for the notification line to the manager was set to No. This means that the system does not enforce field-level permissions when the manager views the workflow.
Scenario 2: Approvals for Self-Service

NEW QUESTION # 54

In your project, the client asks for a mechanism by which a workflow can be approved by any one of a pool of people. What tool would you use to configure the group?

- A. Manage Permission Groups
- B. Manage Dynamic Roles
- C. Manage Workflow Groups
- D. Manage Workflow Requests

Answer: C

Explanation:
To configure a workflow that can be approved by any one member of a designated group, you should use the Manage Workflow Groups tool. This functionality allows the creation of dynamic groups whose members can act as approvers in workflows. When such a group is assigned to a workflow, the approval request is sent to all group members, but only one member needs to take action to approve the workflow.
Options A, B, and C are not suitable for this requirement:
* A. Manage Permission Groups
* This tool is used to define groups for permission purposes and does not directly relate to workflow approvals.
* B. Manage Dynamic Roles
* Dynamic Roles are used to assign roles based on certain criteria but are not designed for grouping multiple users for workflow approvals.
* C. Manage Workflow Requests
* This tool is used to monitor and manage existing workflow requests, not to configure approval groups.
