As you know, we are now facing very great competitive pressure. We need to have more strength to get what we want, and AZ-204 exam dumps may give you these things. After you use our study materials, you can get AZ-204 certification, which will better show your ability, among many competitors, you will be very prominent. Using AZ-204 Exam Prep is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our study materials have to attract customers compared to other products in the industry.

Microsoft AZ-204 exam is designed for developers who want to showcase their skills in developing solutions for Microsoft Azure. AZ-204 exam is a great way for developers to validate their expertise in creating cloud-based applications and services using Azure technologies. Passing AZ-204 Exam will earn developers the Microsoft Certified: Azure Developer Associate certification, which is a highly respected certification in the industry.

Exam Microsoft AZ-204 Success & AZ-204 Best Practice

If you are worry about the coming AZ-204 study materials, our study materials will help you solve your problem. In order to promise the high quality of our AZ-204 study materials, our company has outstanding technical staff, and has perfect service system after sale. More importantly, our good AZ-204 guide questions and perfect after sale service are approbated by our local and international customers. If you want to pass your practice exam, we believe that our learning engine will be your indispensable choices. More and more people have bought our AZ-204 Guide questions in the past years.

Certification Paths

The Microsoft Certified: Azure Developer Associate certificate proves that its holder is a competent professional who can design, build, test, and maintain cloud applications as well as services on Microsoft Azure. Thereafter, one can not only land a lucrative job but also venture into more advanced programs such as Microsoft Certified: Azure Solutions Architect Expert. Still, you can also expand skill set at the current stage by acquiring other associate-level certifications that verify the skills of Azure Data Engineers, Azure Data Administrators, Azure Data Scientists, Azure Security Engineers, and others. Moreover, if you earn Microsoft Certified: Azure Administrator Associate along with Microsoft Certified: Azure Developer Associate, you'll fulfill the prerequisites for the Microsoft Certified: DevOps Engineer Expert certificate.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q137-Q142):

NEW QUESTION # 137

You are developing a service where customers can report news events from a browser using Azure Web PubSub. The service is implemented as an Azure App that the JSON WebSocket suprotocol to receive news events.

You need to implement the bindings for the Azure Function App.

How should you configure the binding? To answer, select the appropriate options in the answer area.

Note: Each Correct Selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 138

You develop a web app that uses tier D1 app service plan by using the Web Apps feature of Microsoft Azure App Service.

Spikes in traffic have caused increases in page load times.

You need to ensure that the web app automatically scales when CPU load is about 85 percent and minimize costs.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

Explanation

Step 1: Configure the web app to the Standard App Service Tier

The Standard tier supports auto-scaling and we should minimize the cost.

Step 2: Enable autoscaling on the web app

First enable autoscale

Step 3: Add a scale rule

Step 4: Add a Scale condition

Reference:

<https://docs.microsoft.com/en-us/azure/monitoring-and-diagnostics/monitoring-autoscale-get-started>

NEW QUESTION # 139

A company is developing a solution that allows smart refrigerators to send temperature information to a central location. You have an existing Service Bus.

The solution must receive and store messages until they can be processed. You create an Azure Service Bus instance by providing a name, pricing tier, subscription, resource group, and location.

You need to complete the configuration.

Which Azure CLI or PowerShell command should you run?

- A. Option B
- B. Option A
- C. Option C
- D. Option D

Answer: A

Explanation:

Explanation

A service bus instance has already been created (Step 2 below). Next is step 3, Create a Service Bus queue.

Note:

Steps:

Step 1: # Create a resource group

```
resourceGroupName='myResourceGroup'
```

```
az group create --name $resourceGroupName --location eastus
```

Step 2: # Create a Service Bus messaging namespace with a unique name

```
namespaceName=myNameSpace$RANDOM
```

```
az servicebus namespace create --resource-group $resourceGroupName --name $namespaceName --location eastus
```

Step 3: # Create a Service Bus queue

```
az servicebus queue create --resource-group $resourceGroupName --namespace-name $namespaceName
```

--name BasicQueue

Step 4: # Get the connection string for the namespace

connectionString=\$(az servicebus namespace authorization-rule keys list --resource-group

\$resourceGroupName --namespace-name \$namespaceName --name RootManageSharedAccessKey --query primaryConnectionString --output tsv) References:

<https://docs.microsoft.com/en-us/azure/service-bus-messaging/service-bus-quickstart-cli>

NEW QUESTION # 140

A development team is developing an application. The application will be storing its data in Azure Table storage. Below are the fields that are going to be stored in the table

- Region

- Email address

- Phone number

The following snippet of code needs to be completed that would be used to insert a batch of records.

Which of the following will go into Slot1?

- A. TableQuery
- B. TableOperation
- C. TableEntity
- **D. TableBatchOperation**

Answer: D

Explanation:

<https://docs.microsoft.com/en-us/azure/cosmos-db/table-storage-how-to-use-dotnet>

NEW QUESTION # 141

You plan to deploy a new application to a Linux virtual machine (VM) that is hosted in Azure.

The entire VM must be secured at rest by using industry-standard encryption technology to address organizational security and compliance requirements.

You need to configure Azure Disk Encryption for the VM.

How should you complete the Azure CLI commands? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: keyvault

Create an Azure Key Vault with az keyvault create and enable the Key Vault for use with disk encryption.

Specify a unique Key Vault name for keyvault_name as follows:

keyvault_name=myvaultname\$RANDOM

az keyvault create \

--name \$keyvault_name \

--resource-group \$resourcegroup \

--location eastus \

--enabled-for-disk-encryption True

Box 2: keyvault key

The Azure platform needs to be granted access to request the cryptographic keys when the VM boots to decrypt the virtual disks.

Create a cryptographic key in your Key Vault with az keyvault key create. The following example creates a key named myKey:

az keyvault key create \

--vault-name \$keyvault_name \

--name myKey \

--protection software

Box 3: vm

Create a VM with az vm create. Only certain marketplace images support disk encryption. The following example creates a VM named myVM using an Ubuntu 16.04 LTS image:

```
az vm create \  
--resource-group $resourcegroup \  
--name myVM \  
--image Canonical:UbuntuServer:16.04-LTS:latest \  
--admin-username azureuser \  
--generate-ssh-keys \  
Box 4: vm encryption  
Encrypt your VM with az vm encryption enable:  
az vm encryption enable \  
--resource-group $resourcegroup \  
--name myVM \  
--disk-encryption-keyvault $keyvault_name \  
--key-encryption-key myKey \  
--volume-type all
```

Box 4: vm encryption

Encrypt your VM with az vm encryption enable:

```
az vm encryption enable \  
--resource-group $resourcegroup \  
--name myVM \  
--disk-encryption-keyvault $keyvault_name \  
--key-encryption-key myKey \  
--volume-type all
```

Note: seems to an error in the question. Should have enable instead of create.

Box 5: all

Encrypt both data and operating system
