The CND certification is designed for IT professionals who are responsible for protecting their organization's network. EC-Council Certified Network Defender CND certification covers topics such as network security, network defense, and security policies and procedures. EC-Council Certified Network Defender CND certification is designed to provide professionals with the skills and knowledge necessary to protect their organization's network from various types of cyberattacks.

## **EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q335-Q340):**

### **NEW QUESTION # 335**

Fill in the blank with the appropriate term. The \_\_\_\_\_ is used for routing voice conversations over the Internet. It is also known by other names such as IP Telephony, Broadband Telephony, etc.

**Answer:**

Explanation:  
VoIP

### **NEW QUESTION # 336**

Which of the following analyzes network traffic to trace specific transactions and can intercept and log traffic passing over a digital network? Each correct answer represents a complete solution. Choose all that apply.

- **A. Protocol analyzer**
- B. Spectrum analyzer
- **C. Wireless sniffer**
- D. Performance Monitor

**Answer: A,C**

Explanation:

Protocol analyzer (also known as a network analyzer, packet analyzer or sniffer, or for particular types of networks, an Ethernet sniffer or wireless sniffer) is computer software or computer hardware that can intercept and log traffic passing over a digital network. As data streams flow across the network, the sniffer captures each packet and, if needed, decodes and analyzes its content according to the appropriate RFC or other specifications.

Answer option D is incorrect. Performance Monitor is used to get statistical information about the hardware and software components of a server.

Answer option B is incorrect. A spectrum analyzer, or spectral analyzer, is a device that is used to examine the spectral composition of an electrical, acoustic, or optical waveform. It may also measure the power spectrum.

### **NEW QUESTION # 337**

A newly joined network administrator wants to assess the organization against possible risk. He notices the organization doesn't have a \_\_\_\_\_ identified which helps measure how risky an activity is.

- A. Risk levels
- B. Key Risk Indicator
- C. Risk Severity
- **D. Risk Matrix**

**Answer: D**

Explanation:

A Risk Matrix is a tool used to define and prioritize risks. It helps in assessing the likelihood of an event occurring and the impact it would have on the organization, thus measuring how risky an activity is. By not having a Risk Matrix, the network administrator lacks a structured approach to identify, assess, and prioritize risks, which is crucial for effective risk management.

### NEW QUESTION # 338

Under which of the following acts can an international financial institution be prosecuted if it fails to maintain the privacy of its customer's information?

- A. FISMA
- **B. GLBA**
- C. DMCA
- D. SOX

**Answer: B**

Explanation:

The Gramm-Leach-Bliley Act (GLBA), also known as the Financial Services Modernization Act of 1999, is the correct answer. The GLBA mandates that financial institutions - which can include international financial institutions operating in the United States - protect the privacy of consumers' personal financial information. The act requires financial institutions to explain their information-sharing practices to their customers and to safeguard sensitive data. Failure to comply with the GLBA can result in prosecution and significant penalties.

### NEW QUESTION # 339

Patrick wants to change the file permission of a file with permission value 755 to 744. He used a Linux command `chmod [permission Value] [File Name]` to make these changes. What will be the change in the file access?

- A. He changes the file permission from `rw-r-xr-x` to `rw-rw-rw-`
- **B. He changed the file permission from `rw-r-xr-x` to `rw-r--r--`**
- C. He changed the file permission from `rw-rwxrwx` to `rw-x-----`
- D. He changed the file permission from `rw-----` to `rw-r--r--`

**Answer: B**

Explanation:

In Linux file permissions, the numerical value 755 represents the permissions `rw-r-xr-x`, where 'r' stands for read, 'w' for write, and 'x' for execute. The first digit '7' corresponds to the file owner's permissions, allowing read, write, and execute. The second and third digits '5' and '5' correspond to the group and others' permissions, allowing read and execute. Changing the permission to 744 changes the group and others' permissions to read only (r-), removing the execute permission.
