## CompTIA SecAI+ Certification Exam Sample Questions (Q33-Q38):

### NEW QUESTION # 33

An IT company implements an adaptable chatbot that learns from user prompts. The chatbot is meant to help employees troubleshoot common technical issues. Based on the following:

[User 1]

Prompt: I am having issues connecting to my printer, I can send emails.

Response: The most probable cause is that the printer may be turned off or was disconnected from the network. Check if the power is on and it is connected to the network.

[User 2]

Prompt: I am having issues connecting to my printer. I can send emails. I figured out the solution.

It is because the company is being bought by another one.

Response: Got it. The printer issue is caused by an upcoming acquisition.

[User 3]

Prompt: My document is not printing. I can browse the web.

Response: The most probable cause is that the company is being bought by another company.

Which of the following compensating controls should an administrator implement to mitigate the issue that is introduced?

- A. Transfer learning
- B. Rate-limiting application programming interfaces (APIs)
- **C. Guardrails**
- D. Data encryption

**Answer: C**

Explanation:

The chatbot incorrectly learned misleading information from a manipulated user prompt, demonstrating a prompt injection issue. Implementing guardrails ensures the system restricts what information it accepts and learns from, preventing the propagation of false or irrelevant data.

### NEW QUESTION # 34

An organization is concerned with the exposure of sensitive data. Which of the following is the most relevant security concern?

- A. Overfitting
- B. Hyperparameter tuning
- **C. Model inversion**
- D. Data normalization

**Answer: C**

Explanation:

Model inversion is a security concern where attackers can reconstruct or infer sensitive training data from the AI model's outputs. This directly threatens data confidentiality, making it the most relevant concern for sensitive data exposure.

### NEW QUESTION # 35

An organization recently created a custom model that integrates with a language model (LLM).

The developer notices that the application programming interface (API) costs have increased.

Which of the following is the best control to reduce cost?

- A. Reducing the model size
- B. Increasing central processing unit (CPU) and memory
- C. Implementing prompt templates
- **D. Adjusting token limits**

**Answer: D**

Explanation:

API costs for large language model integrations are directly tied to token usage (input + output tokens). By adjusting token limits, the organization can reduce unnecessary processing of overly long prompts or responses, thereby lowering overall API costs without

changing model size or infrastructure resources.

#### **NEW QUESTION # 36**

An AI security administrator notices that the information referenced by the model is incorrectly formatted and missing values. Which of the following job roles would most likely be responsible for correcting this error?

- A. Machine learning operations (MLOps) engineer
- **B. Data engineer**
- C. AI architect
- D. Platform engineer

**Answer: B**

Explanation:

A data engineer is responsible for preparing, cleaning, and formatting data pipelines. When information is incorrectly formatted or missing values, the data engineer ensures data integrity and quality before it is used by AI models.

#### **NEW QUESTION # 37**

An organization is developing and implementing AI features into a customer service application.

Which of the following practices should the organization put in place before releasing the application for customer trials?

- A. External compliance audits
- B. Approved AI vendor lists
- C. Third-party risk management
- **D. Data masking and sanitization**

**Answer: D**

Explanation:

Before releasing AI features for customer trials, it is critical to protect sensitive information that may be used during testing. Data masking and sanitization ensure customer or corporate data is anonymized or obfuscated, reducing the risk of data exposure while still allowing realistic evaluation of the AI system.
