Exam - Notes/Domino 12 Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which file is automatically updated during Domino server configuration to store environment-specific settings?

- A. admin4.nsf
- B. names.nsf
- C. notes.ini
- D. server.id

Answer: C

Explanation:

The notes.ini file is the primary configuration file for an HCL Domino server. During the initial setup and configuration process, the Domino utility automatically updates this file with environment-specific settings, such as the server's name, the path to the data directory, and the specific tasks to be loaded at startup. It serves as the master checklist for how the server behaves every time it boots.

NEW QUESTION # 20

What is a distinguishing feature of a mail-only registration in Domino?

- A. It requires multiple server certifiers
- B. It creates only the vault document
- C. It bypasses mail policy enforcement
- D. It excludes the creation of a Notes ID

Answer: D

Explanation:

A mail-only registration is used for users who will not be using the HCL Notes client and instead access their mail via internet protocols like POP3, IMAP, or HTTP. Because these users do not require Notes-specific authentication or encryption, the registration process excludes the creation of a Notes ID file. This simplifies the registration process for users who only need access to their Domino mailboxes through standard web browsers or third-party email clients.

NEW QUESTION # 21

The AdminP task processes its queue from the _____ database.

- A. mail.box
- B. admin4.nsf
- C. certlog.nsf
- D. names.nsf

Answer: B

Explanation:

The Administration Process (AdminP) is an automated system for updating the Domino Directory and managing various server and database tasks throughout a domain. All administrative requests-such as user renames, deletions, or moves-are submitted as "request notes" to the Administration Requests database (admin4.nsf). The AdminP task on each server monitors this database, identifies tasks it needs to perform, and records the results of those actions back into the same database for the administrator to review.

NEW QUESTION # 22

Which Domino document is used to define the mail routing topology between servers?

- A. Connection document

- B. Domain Configuration document
- C. Server document
- D. Person document

Answer: A

Explanation:

A Connection document is the primary tool used in the Domino Directory to define mail routing topology and replication schedules between servers. It specifies the source and destination servers, the connection type (e.g., Local Network), and the specific times when the Router should push mail or when databases should replicate between the two systems.

NEW QUESTION # 23

During server configuration, the administrator must specify the _____ which uniquely identifies the Domino server within the domain.

- A. IP Address
- **B. Server ID**
- C. Server URL
- D. DNS Hostname

Answer: B

Explanation:

While a server has many identifiers (like an IP or Hostname), the Server ID is the unique security file that defines the server's identity within the Domino domain. This file contains the server's private key and is created during the registration process. The Server ID allows the server to authenticate with other servers and clients, ensuring it is a trusted member of the hierarchical organization.

NEW QUESTION # 24

.....

VCEngine is an authoritative study platform to provide our customers with different kinds of HCL-DOM-AADM-12 practice torrent to learn, and help them accumulate knowledge and enhance their ability to pass the exam as well as get their expected scores. There are three different versions of our HCL-DOM-AADM-12 Study Guide: the PDF, the Software and the APP online. To establish our customers' confidence and avoid their loss for choosing the wrong exam material, we offer related free demos of HCL-DOM-AADM-12 exam questions for our customers to download before purchase.
