Pass Guaranteed 2026 EC-COUNCIL Marvelous 712-50: Study EC-Council Certified CISO (CCISO) Demo

If you are then you do not need to worry about it. Just visit the "TestKingFree" and explore the top features of EC-Council Certified CISO (CCISO) (712-50) exam questions and if you think the TestKingFree 712-50 Exam Questions can help you then download TestKingFree 712-50 exam questions and start EC-Council Certified CISO (CCISO) (712-50) exam preparation today.

The EC-Council Certified CISO (CCISO) is a certification program designed to provide senior-level information security professionals with the advanced knowledge and skills needed to succeed in today's complex cybersecurity landscape. The CCISO certification is the first of its kind to recognize the unique skills and experience required for top-level information security management positions. 712-50 exam is administered by the International Council of Electronic Commerce Consultants (EC-Council), a global leader in information security education and certification.

The CCISO certification exam is an advanced certification program designed for experienced information security professionals who are looking for a career path in information security management. 712-50 Exam is based on the real-world experience and knowledge of top-level information security executives and professionals. EC-Council Certified CISO (CCISO) certification exam recognizes the unique requirements of executive management and provides the skills and knowledge required to manage an

organization's information security program effectively.

EC-COUNCIL EC-Council Certified CISO (CCISO) Sample Questions (Q310-Q315):

NEW QUESTION # 310

The implementation of anti-malware and anti-phishing controls on centralized email servers is an example of what type of security control?

- A. Management control
- B. Organization control
- C. Technical control
- D. Procedural control

Answer: C

Explanation:

Anti-Malware and Anti-Phishing Controls:

* These are technical controls as they involve the use of technology to detect and mitigate malware and phishing threats.

Application Context:

* Centralized email server protections are technical implementations to secure communication channels.

Supporting Reference:

* CCISO materials categorize anti-malware and anti-phishing measures as technical controls essential for defending against cyber threats.

NEW QUESTION # 311

What role should the CISO play in properly scoping a PCI environment?

- A. Complete the self-assessment questionnaire and work with an Approved Scanning Vendor (ASV) to determine scope
- B. Work with a Qualified Security Assessor (QSA) to determine the scope of the PCI environment
- C. Validate the business units' suggestions as to what should be included in the scoping process
- D. Ensure internal scope validation is completed and that an assessment has been done to discover all credit card data

Answer: D

NEW QUESTION # 312

When choosing a risk mitigation method what is the MOST important factor?

- A. Metrics of mitigation method success
- B. Mitigation method complies with PCI regulations
- C. Approval from the board of directors
- D. Cost of the mitigation is less than the risk

Answer: D

NEW QUESTION # 313

Which of the following would be used to measure the effectiveness of an Information Security Management System (ISMS)?

- A. Control Objectives for Information and Related Technology (COBIT)
- B. Information Technology Infrastructure Library (ITIL)
- C. International Organization for Standardization (ISO) 27004
- D. International Organization for Standardization (ISO) 27005

Answer: C

Explanation:

Comprehensive and Detailed Explanation (250-350 words)

Exact alignment with EC-Council CCISO documentation and referenced ISO standards According to EC-Council Chief Information Security Officer (CCISO) program documentation, measuring the effectiveness of an Information Security Management System (ISMS) requires defined, repeatable, and standardized metrics. The CCISO body of knowledge explicitly aligns ISMS performance measurement with ISO/IEC 27004, which is the international standard dedicated to information security metrics, measurement, and reporting.

ISO/IEC 27004 provides guidance on how organizations should develop, implement, analyze, and improve measurements that assess the effectiveness and efficiency of an ISMS. The CCISO program emphasizes that governance-level leaders must rely on quantifiable, objective metrics rather than operational frameworks or risk assessment standards when evaluating ISMS performance. ISO 27004 directly supports this executive requirement by defining what to measure, how to measure it, and how to interpret results in the context of business objectives.

In contrast, ITIL is a service management framework focused on IT service delivery and lifecycle management, not on measuring ISMS effectiveness. While ITIL supports operational excellence, CCISO materials clearly distinguish IT service management from security governance measurement.

COBIT (corrected from the incorrect spelling "CODIT") is a governance and management framework for enterprise IT. Although COBIT includes security-related control objectives and maturity models, it is not designed specifically to measure ISMS effectiveness at the level required by ISO-aligned security programs.

ISO/IEC 27005, meanwhile, focuses on information security risk management. The CCISO curriculum explains that risk assessment is a critical component of an ISMS, but it does not provide guidance on performance measurement or effectiveness metrics.

Therefore, as confirmed in EC-Council CCISO documentation and its reliance on ISO standards, ISO/IEC

27004 is the correct and authoritative standard used to measure the effectiveness of an ISMS, making Option C the correct answer.

NEW QUESTION # 314

If your organization operates under a model of "assumption of breach", you should:

- A. Focus your security efforts on high value assets
- **B. Purchase insurance for your compliance liability**
- C. Protect all information resource assets equally
- D. Establish active firewall monitoring protocols

Answer: B
