Plat-Dev-210 Practice Guide, Certification Plat-Dev-210 Exam Infor

Passing the Plat-Dev-210 certification can prove that you boost both the practical abilities and the knowledge and if you buy our Plat-Dev-210 latest question you will pass the exam smoothly. Our Plat-Dev-210 exam torrent is compiled elaborately and we provide free download and tryout before your purchase. We provide free update and the old client can enjoy the discount. We protect the client's privacy and the purchase procedure on our website is safe and our Plat-Dev-210 Guide questions boost no virus. We provide 24 hours online customer service and if you couldn't pass the exam we will refund you in full immediately.

Salesforce Certified Omnistudio Developer Sample Questions (Q27-Q32):

NEW QUESTION # 27

Refer to the exhibit below. What is the merge code needed for this Integration Procedure structure to pass a CaseData node from the HTTP Action's output to the DataRaptor Transform Action?

- A. %DRXformCaseData: CaseData%
- **B. {{ HTTPGetCaseDetails:CaseData }}**
- C. {{CaseData}}
- D. %HTTPGetDetails:CaseData%

Answer: B

Explanation:

The merge code syntax for accessing a node from an Integration Procedure output is {{ProcedureName: NodeName}}. In this case, the ProcedureName is HTTPGetCaseDetails and the NodeName is CaseData. The % sign is used for single-value merge codes, not node merge codes. The \$ sign is used for variables, not merge codes.

NEW QUESTION # 28

A developer needs to use the COUNTIF function to process data entered by the user in an OmniScript. The output of the function needs to be displayed to the user immediately in the current step. Based on best practice, which element should the developer use this function in?

- A. Range element
- **B. Formula element**
- C. Set Values element

Answer: B

Explanation:

In OmniScripts, if you need to apply a function (like COUNTIF) to dynamic data and show the result immediately, the Formula element is the correct choice.

* B. Formula element - The Formula element supports real-time calculation using OmniStudio expression functions (like COUNTIF, SUM, etc.) and updates values instantly on the screen without the need for server calls.

Incorrect Options:

* A. Set Values element is used to set static or conditional values but doesn't support formula evaluation.

* C. Range element is used for value comparisons and conditions, not for calculations.

:

Salesforce OmniStudio Developer Guide # OmniScript Formula Element

NEW QUESTION # 29

An OmniScript updates data from one Salesforce record, but when it completes, only some of the data is updated in Salesforce. A DataRaptor Load saves the data. What error could cause this behavior?

Choose 2 answers

- A. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type.
- B. The fields that are not updated are read only in Salesforce.
- **C. The input JSON paths In the DataRaptor Load do not match the JSON from the OmniScript.**
- **D. ContextId is misspelled in the merge code that passes the RecordId to the DataRaptor**

Answer: C,D

Explanation:

The input JSON paths In the DataRaptor Load must match the JSON from the OmniScript, otherwise the data will not be mapped correctly to the Salesforce fields. ContextId must be spelled correctly in the merge code that passes the RecordId to the DataRaptor, otherwise the DataRaptor will not be able to identify which record to update. The fields that are not updated are not necessarily read only in Salesforce, as they could be editable by other means. In the DataRaptor Load, in the Preview tab, the Record is from the wrong record type has no effect on updating data in Salesforce, as it is only used for testing purposes.

NEW QUESTION # 30

A developer creates a DataRaptor Extract to retrieve data to pass to an external service. The external service expects the field value to be an integer. However, the DataRaptor is sending it as a string. Which action can the developer take to fix this?

- A. In the DataRaptor Output tab, select the Output Data Type of that field to Integer.
- B. In the DataRaptor Output tab, enter the default value as 0 on the field.
- C. In the DataRaptor Formula tab, define a formula using the function TOINTEGER and use the formula as output.
- D. In the DataRaptor Extract tab, set the Input Data Type field to Integer.

Answer: C

Explanation:

The DataRaptor Formula tab allows the developer to define formulas using functions and operators to manipulate data. The TOINTEGER function converts a string value to an integer value. The developer can use this function to output the field value as an integer and use the formula as output

NEW QUESTION # 31

Refer to the exhibit.

A developer has configured an integration Procedure element with SEND/RESPONSETRANSFORMATIONS as shown. Alternatively, how could the developer configure Additional input to send exactly the same data? Assume that the developer checked Send Only Additional input.

- A.
- B.
- C.

Answer: A

Explanation:

Option C is the correct way to configure Additional input to send exactly the same data as Input Data. The Additional input should have a key/value pair for each field in Input Data, and the value should be set to `{{InputData.field}}` for each field. This will pass the value of Input Data for each field to Additional input.

NEW QUESTION # 32

.....

The best news is that during the whole year after purchasing, you will get the latest version of our Plat-Dev-210 exam prep for free, since as soon as we have compiled a new version of the study materials, our company will send the latest one of our Plat-Dev-210 study materials to your email immediately. And you will be satisfied by our service for we will auto send it to you as long as we update them. If you have to get our Plat-Dev-210 learning guide after one year, you can still enjoy 50% discounts off on the price.
