NEW QUESTION # 39

A company uses four objects in development in Business Central.

The company plans to make changes to the objects.

You need to identify the application layer for each object in Visual Studio Code.

Which objects are available in each application layer? To answer, move the appropriate application layer to the correct objects. You may use each application layer once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Language table # System layer

Activities Cue table # Base layer

Extension Management codeunit # System layer

Business Unit Card page # Base layer

Application Layers in Business Central:

In Business Central, there are different layers such as Base and System, which represent different levels of the application architecture. Here's a breakdown of where each object is likely to belong based on typical Business Central architecture:

* Language Table: This table typically belongs to the System layer, as language and localization features are often part of the foundational aspects of the system.

* Activities Cue Table: This would likely be found in the Base layer because it involves business logic that supports user interface elements (like activity cues) specific to the Business Central application.

* Extension Management Codeunit: The Extension Management Codeunit likely belongs to the System layer, as it deals with handling extensions, which is closely related to the core system functionality for managing and deploying changes.

* Business Unit Card Page: This object would typically be part of the Base layer, as it is a business-specific object that handles the user interface for business unit data, part of the core Business Central application.

NEW QUESTION # 40
