

CDT Demotesten & CDT Musterprüfungsfragen

In dieser dynamischen Welt lohnt sich, etwas für berufliche Weiterentwicklung zu tun. Angesichts des Fachkräftemangels in vielen Branchen haben Sie mit einer Construction Specifications Institute CDT (Construction Documents Technologist) Zertifizierung mehr Kontrolle über Ihren eigenen Werdegang und damit bessere Aufstiegschancen.

Die Fragenkataloge von Pass4Test enthalten die Lernmaterialien und Simulationsfragen zur Construction Specifications Institute CDT Zertifizierungsprüfung. Noch wichtiger bieten wir die originalen CDT Fragen Und Antworten.

CDT Test Dumps, CDT VCE Engine Ausbildung, CDT aktuelle Prüfung

Die berufliche Aussichten einer Person haben viel mit ihre Fähigkeit zu tun. Deshalb ist die internationale Zertifikat ein guter Beweis für Ihre Fähigkeit. Construction Specifications Institute CDT Prüfungszertifizierung ist ein überzeugender Beweis für Ihre IT-Fähigkeit. Diese Prüfung zu bestehen braucht genug Vorbereitungen. Die Unterlagen der Construction Specifications Institute CDT Prüfung werden von unseren erfahrenen Forschungs-und Entwicklungsstellen sorgfältig geordnet. Diese wertvolle Unterlagen können Sie jetzt benutzen. Auf unserer offiziellen Webseite können Sie die Construction Specifications Institute CDT Prüfungssoftware gesichert kaufen.

Construction Specifications Institute Construction Documents Technologist CDT Prüfungsfragen mit Lösungen (Q18-Q23):

18. Frage

Which of the following is a scaled view?

- A. Perspective
- B. Isometric
- **C. Foundation plan**
- D. Riser diagram

Antwort: C

19. Frage

With whom does the responsibility for maintaining record documents at the project site rest?

- A. Owner's project representative
- B. Architect/engineer (A/E)'s consultant
- **C. Contractor**
- D. A/E's project representative

Antwort: C

Begründung:

Comprehensive and Detailed Explanation (CSI-aligned, paraphrased)

CSI guidance and typical Division 01 "Project Record Documents" or "Record Drawing" sections assign the responsibility for maintaining record documents at the project site to the Contractor.

These record documents (often called "as-builts" when finalized) include:

- * A set of contract drawings marked up to show actual installed conditions.
- * Notations of changes made by Change Orders, Construction Change Directives, and field orders.
- * Markups of routing of concealed utilities, changes in locations, and deviations from the original design that were approved during construction.

Key CSI-aligned principles:

- * The Contractor is the party actually performing and coordinating the Work, and is in the best position to record day-to-day deviations and field changes.

- * Division 01 typically states that the Contractor must:

- * Keep a current set of record documents on site, up to date as changes occur.

- * Turn over the completed record documents to the A/E and/or Owner at Substantial or Final Completion as part of closeout.

Therefore, responsibility for maintaining the record documents at the project site rests with:

- * A. Contractor

Why the other options are not correct:

- * B. A/E's consultant - Consultants (e.g., structural, mechanical) prepare and may later review record documentation, but they are not on site continuously and are not responsible for maintaining daily- updated record sets at the site.

- * C. A/E's project representative - The A/E's representative may review the record documents or check that they are being maintained, but the contract language typically assigns the duty itself to the Contractor.

- * D. Owner's project representative - The Owner's representative monitors the project on the Owner's behalf but does not usually maintain the working record set. That would be duplicative and impractical compared to the Contractor's role.

Key CSI-Related Reference Titles (no links):

- * CSI Construction Specifications Practice Guide - Division 01 sections on Project Record Documents / As-Builts.

- * CSI Project Delivery Practice Guide - Construction Phase responsibilities of the Contractor and A/E.

- * CSI CDT Study Materials - contractor responsibilities for record documents and closeout submittals.

20. Frage

Which project phase would outline specifications be created in order to be used as a checklist for further development of the project documents?

- A. Design Development phase
- B. Project Conception phase
- **C. Schematic Design phase**
- D. Construction Document phase

Antwort: C

21. Frage

Which Uniform Drawing System (UDS) symbol would be used in a plan view drawing and directs the user to an elevation view?

- A. Option C
- B. Option D
- C. Option B
- D. Option A

Antwort: A

22. Frage

An architect/engineer wants to schedule monthly meetings with a contractor and owner to discuss matters pertinent to timely and successful completion of the work. Which type of meeting should they schedule?

- A. Schedule monitoring meeting
- B. Workflow meeting
- C. Preinstallation meeting
- D. Progress meeting

Antwort: D

Begründung:

CSI/CDT identifies several formal construction phase meetings, each with a specific purpose. Among them:

- * Preconstruction conference - Held at the start of the project.
- * Preinstallation meetings - Held before specific portions of work begin (e.g., roofing, curtain wall, concrete).
- * Progress meetings (job meetings) - Held regularly (often weekly or monthly) during the construction phase to review overall project status, schedule, coordination issues, and actions needed.

A progress meeting is defined in A201/Division 01 and CSI guidance as a recurring meeting of the owner, contractor, architect/engineer, and key parties to:

- * Review work progress and status of the schedule
- * Address issues affecting timely and successful completion of the work
- * Coordinate upcoming activities and resolve questions or conflicts
- * Review submittals, RFIs, changes, and other administrative matters

That is exactly what the question describes: monthly meetings with the contractor and owner focused on timely and successful completion. This matches Option C - Progress meeting.

Why the other options are incorrect:

- * A. Workflow meeting "Workflow meeting" is not a standard CSI or AIA term for a formal contract- phase meeting. While teams may hold internal coordination meetings, the recognized contract-related recurring meeting in CSI/AIA practice is the progress meeting, not "workflow meeting."
- * B. Preinstallation meeting Preinstallation meetings (sometimes called "pre-installation conferences") are task- or trade-specific, held before a particular system or portion of work begins (e.g., roofing, masonry, fire protection). They focus on that specific work's requirements, sequencing, and coordination-not on overall project progress each month. Therefore, they do not match the general monthly, whole-project focus described in the question.
- * D. Schedule monitoring meeting While progress meetings certainly involve schedule review and monitoring, "schedule monitoring meeting" is not the standard CSI/AIA term for the regular contract administration meeting among owner, contractor, and A/E. In standard contract documents and CSI references, the recognized name is "progress meeting." CSI / CDT-aligned references (no links):
- * CSI Project Delivery Practice Guide - discussions of construction phase meetings, including preconstruction, preinstallation, and progress meetings.

* CSI Construction Specifications Practice Guide - Division 01 sections for "Project Management and Coordination" / "Construction Progress Meetings."

* CDT content referencing AIA A201 and Division 01 provisions for regular progress meetings and their agendas.
