

ITDumpsKR에서 출시한 AVIXA인증CTS 덤프는 시험문제점유율이 가장 높은 시험대비자료입니다. 실제AVIXA인증CTS시험문제유형과 같은 형식으로 제작된AVIXA인증CTS 시험공부자료로서ITDumpsKR덤프의 실용가치를 자랑하고 있습니다.덤프를 공부하여 시험불합격하시면 덤프비용은 환불처리해드립니다.

ITDumpsKR의 AVIXA인증 CTS시험덤프자료는 여러분의 시간,돈,정력을 아껴드립니다. 몇개월을 거쳐 시험준비공부를 해야만 패스가능한 시험을ITDumpsKR의 AVIXA인증 CTS덤프는 며칠간에도 같은 시험패스 결과를 안겨드릴수 있습니다. AVIXA인증 CTS시험을 통과하여 자격증을 취득하려면ITDumpsKR의 AVIXA인증 CTS덤프로 시험준비공부를 하세요.

>> CTS높은 통과율 덤프샘플문제 <<

CONCLUSIONS

지난 몇년동안 IT산업의 지속적인 발전과 성장을 통해 AVIXA 인증 CTS 시험은 IT인증시험중의 이정표로 되어 많은 인기를 누리고 있습니다. IT인증 시험을 ITDumpsKR 덤프로 준비해야만 하는 이유는 ITDumpsKR 덤프는 IT업계 전문가들이 실제 시험문제를 연구하여 시험문제에 대비하여 예상문제를 제작했다는 점에 있습니다.

최신 AVIXA Certification CTS 무료샘플문제 (Q152-Q157):

질문 # 152

The integrator gets an urgent service call from the client's AV engineer that there is no power indication on the HDMI switcher in the rack. What is the BEST workaround that the integrator can suggest?

- A. call the manufacturer for support
- B. change the power supply of the faulty unit
- C. bring in another switcher to replace the broken one
- D. patch the input to the output, bypassing the switcher

정답: D

설명:

The best immediate workaround is to patch the input directly to the output, bypassing the switcher. This allows the system to continue functioning while a more permanent solution is found. It ensures that the client experiences minimal downtime and disruption. Changing the power supply or replacing the switcher are also viable options, but they may take more time and resources. Calling the manufacturer for support can also be part of the solution process, but it doesn't provide an immediate workaround.

질문 # 153

An AV technician has been called to a lecture hall where the presenter complains of a loud squealing noise that makes their presentation inaudible. What is the BEST strategy to address the complaint?

- A. Mute unused microphone channels on the audio mixer
- B. Position the microphone in front of the loudspeakers
- C. Position the microphone away from the presenter
- D. Increase the gain for the microphone

정답: A

설명:

The loud squealing noise is feedback, often caused by open (but unused) microphones picking up sound from the speakers and reintroducing it into the system. Muting unused channels eliminates that loop and is considered best practice during live sound reinforcement.

"Muting unused microphones prevents feedback loops and is an essential practice in live sound environments."

질문 # 154

In order to run three cables inside a conduit, what is the maximum percentage of a conduit's internal cross-sectional area to be considered?

- A. 40%
- B. 53%
- C. 31%
- D. 60%

정답: A

설명:

When running three cables inside a conduit, the maximum allowable fill is 40% of the conduit's internal cross-sectional area. This percentage is specified to ensure that there is adequate space for pulling the cables through without causing damage and to allow for proper airflow to prevent overheating.

CTS Technology Specialist Reference According to the CTS guidelines and National Electrical Code (NEC), conduits should not exceed 40% fill for three or more cables to ensure safety and maintain the integrity of the cables during installation and use.

질문 # 155

A client requests for a project to be completed earlier than initially scheduled. What should the AV contractor do FIRST to address

this change?

- A. provide a request for change (RFC) to the client to approve the change to the schedule
- B. provide a change order (CO) to the client outlining changes to the project and any additional costs
- C. deny the request and work to the original agreed schedule
- D. allocate more resources to meet the earlier completion date

정답: A

설명:

When a client requests an earlier project completion date, the AV contractor should first issue a Request for Change (RFC). This formal request documents the proposed schedule change and requires client approval. It allows for assessment of resource requirements, timeline adjustments, and any potential cost implications.

CTS Technology Specialist ReferenceThe CTS guidelines stress documenting changes through formal requests like RFCs to ensure client approval and clarity on any impact to the project.

질문 # 156

Upon completion of hardware installation and configuration for a new deployment, the NEXT thing the AV Project Manager should have scheduled is

- A. invoicing and project close out.
- B. training the client.
- C. testing and verification.
- D. preventative maintenance schedule.

정답: C

설명:

Upon completion of hardware installation and configuration for a new deployment, the next thing the AV Project Manager should have scheduled is testing and verification. This step ensures that all installed equipment functions correctly and meets the project specifications. It involves checking system performance, resolving any issues, and confirming that the setup works as intended. Axis Technology Specialist documentation underscores the critical role of thorough testing and verification in delivering a successful AV project.
