

# MB-820 Certification | Pass4sure MB-820 Exam Prep

BTW, DOWNLOAD part of TopExamCollection MB-820 dumps from Cloud Storage: [https://drive.google.com/open?id=1lZX5Rj5c-y\\_huvOnPwyGJ0EZO7mMsWAn](https://drive.google.com/open?id=1lZX5Rj5c-y_huvOnPwyGJ0EZO7mMsWAn)

Our MB-820 Research materials design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our MB-820 learning materials provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our MB-820 Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the MB-820 learning materials can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.

## Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.</li></ul>

## Pass4sure Microsoft MB-820 Exam Prep & Valid MB-820 Exam Topics

Experts at TopExamCollection have also prepared Microsoft MB-820 practice exam software for your self-assessment. This is especially handy for preparation and revision. You will be provided with an examination environment and you will be presented with actual Microsoft MB-820 Exam Questions.

## Microsoft Dynamics 365 Business Central Developer Sample Questions (Q59-Q64):

### NEW QUESTION # 59

You need to develop the report Subcontract Documents Excel List that is required by the control department.

You have the following code:

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

### NEW QUESTION # 60

You need to define the properties for the Receipt No. field in the Non-conformity table when storing the information to the purchasing department. How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

```
field(3; "Receipt No."; Code[20])
```

```
{
```

```
DataClassification = CustomerContent;
```

```
TableRelation = "Purch. Rcpt. Header"."No." where ("Buy-from Vendor No." = field("Vendor No."));
```

```
}
```

\* Field Declaration:

\* The field(3; "Receipt No."; Code[20]) part defines the field in the table with ID 3 and type Code with a length of 20. This field will hold the receipt number.

\* DataClassification:

\* CustomerContent is selected for the DataClassification property, which categorizes the data for privacy and compliance management. This aligns with Business Central's recommendations for handling sensitive data in customer-related tables.

\* TableRelation Property:

\* The TableRelation property links the "Receipt No." field to another table, which in this case is the "Purch. Rcpt. Header" table. This ensures that only valid receipt numbers from the Purchase Receipt Header table can be selected or entered in this field.

\* Relation Filter:

\* The filter condition is applied using the where clause. It ensures that the Receipt No. is only from the Purchase Receipt Header records where the "Buy-from Vendor No." matches the "Vendor No." of the current record.

\* The condition field("Vendor No.") is selected from the drop-down as shown in the image. This links the vendor information in the non-conformity table to the receipt in the Purchase Receipt Header table.

\* By linking the "Vendor No." fields, you ensure that only receipt numbers from the correct vendor are available, which improves data consistency and reduces errors during data entry.

\* References to AL Language:

\* The TableRelation property is frequently used to create references between tables in Business Central. In this case, the correct relationship between the "Purch. Rcpt. Header" and the Non-conformity table is established using the TableRelation and filter.

Reference Documentation:

\* AL TableRelation Property

\* AL Field Syntax

### NEW QUESTION # 61

You plan to create a table to hold client data.

You have the following data integrity requirements:

\* Lookups into other records must be established.

\* Validate if a record exists in a destination record.

You need to select the table field property to use for each requirement.

Which table field property should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

For the data integrity requirements, the table field properties to use are:

- \* To establish lookups into other records, use the TableRelation property.
- \* To validate if a record exists in a destination record, use the ValidateTableRelation property.

In Business Central, when creating tables to hold data, maintaining data integrity is crucial:

\* TableRelation Property: This property is used to create a relationship between the field in one table and a field in another table, which is typically used for lookups. When you set the TableRelation property on a field, it allows users to select from a list of values that exist in the related table.

\* ValidateTableRelation Property: This property is used to ensure that the value entered in a field matches one of the values in a related table. If a user tries to enter a value that doesn't exist in the related table, an error will occur.

### NEW QUESTION # 62

You need to determine If you have unwanted incoming web service calls in your tenant during the last seven days.

Which two KQL queries should you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. ☐
- B. ☐
- C. ☒
- D. ☐
- E. ☒

**Answer: C,E**

Explanation:

The task is to identify unwanted incoming web service calls during the last seven days. To do this, we need to look at KQL (Kusto Query Language) queries that would filter out web service calls based on the timestamp (to ensure the calls are within the last seven days) and by certain characteristics that would indicate they are unwanted, such as the wrong type of protocol (SOAP in this case, as Contoso Ltd. plans to dismiss using it).

Looking at the options:

Option A: This query selects all traces where the timestamp is within the last 7 days and where the custom dimension has a value of 'RT0008', and where the category is either 'ODataV4', 'ODataV3', or 'Api'. This query would show all API calls except SOAP, so it does not directly answer the question about unwanted calls.

Option B: This query filters for traces with a timestamp within the last 7 days, where 'RT0008' is present, and specifically looks for the category 'SOAP'. This query is correct because it directly targets SOAP calls, which are the unwanted calls according to Contoso Ltd.'s plans.

Option C: Similar to option B, this query filters for traces within the last 7 days and looks for 'RT0008' but uses the equality operator for the category 'SOAP'. This would also correctly return the unwanted SOAP calls.

Option D: This query also filters for traces within the last 7 days, but it excludes the 'ODataV4' category, which doesn't necessarily target the unwanted SOAP calls.

Option E: This query selects traces where the timestamp is within the last 7 days and the custom dimension has 'RT0008'. However, it filters out categories 'ODataV4' and 'Api', which does not directly help in identifying the unwanted SOAP calls.

Therefore, the queries that should be used to determine if there are unwanted incoming web service calls (SOAP calls) in the tenant during the last seven days are Options B and C. These queries are specific to identifying SOAP protocol usage, which is what Contoso Ltd. considers unwanted.

### NEW QUESTION # 63

A company plans to change a field on the Resource Card page in a Base Application.

You need to hide the field "Unit Price" from the Resource Card page.

Which code snippet should you use?

- A. ☐
- B. ☐
- C. ☐
- D. ☒

**Answer: D**

Explanation:

To hide the field "Unit Price" from the Resource Card page in Microsoft Dynamics 365 Business Central, you need to modify the visibility property of the field using the modify keyword, which allows you to change the properties of an existing field on a page.

\* modify("Unit Price") is the correct way to target an existing field on a page (like the Resource Card page).

\* The line Visible = false; makes the field invisible on the page.

Here's a breakdown of why each option is right or wrong:

\* Option A:

\* Uses addlast("Unit Price"), which is incorrect because you are not adding a new field; you're modifying an existing one. Also, Visible = false is correct for hiding a field, but the wrong method (addlast) is used.

\* Option B:

\* Uses modify("Unit Price") with Enabled = false;. This would disable the field (make it non- editable), not hide it. The field would still be visible, so this does not meet the requirement.

\* Option C:

\* Uses addlast("Unit Price"), which is incorrect, and Enabled = false;, which would disable the field, not hide it.

\* Option D:

\* modify("Unit Price") { Visible = false; } is the correct syntax for hiding the field on the page.

Correct Code Snippet:

```
modify("Unit Price")
```

```
{  
Visible = false;  
}
```

This hides the "Unit Price" field from the Resource Card page.

## NEW QUESTION # 64

.....

From the time our company was just established until now, we have conducted multiple surveys of users. We also take every feedback from users very seriously. This is a very tedious job, but to better develop our MB-820 learning materials, our professional experts have been insisting on it! We hope to be responsible for every user of our MB-820 Exam Braindumps. Your praise is the driving force of our MB-820 practice questions!
