

# 3V0-21.25 Reliable Test Braindumps, 3V0-21.25 Certification Test Questions

P.S. Free & New 3V0-21.25 dumps are available on Google Drive shared by SureTorrent: [https://drive.google.com/open?id=1G848t7S\\_eg4lqh78P-5pjTwejz0n3Tzz](https://drive.google.com/open?id=1G848t7S_eg4lqh78P-5pjTwejz0n3Tzz)

Nowadays, there are more and more people realize the importance of 3V0-21.25, because more and more enterprise more and more attention it. If someone pass the 3V0-21.25 exam and own relevant certificates that mean he had good grasp of this field of knowledge, that is to say, he will be popular and valued by more enterprise. In order to help most candidates who want to Pass 3V0-21.25 Exam, so we compiled such a study materials to make exam simply. Our 3V0-21.25 guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated according to the change of the syllabus and the latest development conditions in the theory and the practice.

## VMware 3V0-21.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Plan and Design the VMware Solution: This section focuses on designing VMware Cloud Foundation Automation environments based on business and technical requirements. It includes understanding tenancy deployment models, organization types, and the functional components used to structure and manage cloud resources.</li> </ul>

Topic 2	<ul style="list-style-type: none"> <li>VMware Products and Solutions: This section covers VMware products related to VMware Cloud Foundation Automation, particularly components such as vSphere Supervisor and supervisor-based NSX networking. It focuses on identifying and differentiating architectural components and how they function within a deployment.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware Solution: This section covers configuring and administering VMware Cloud Foundation Automation environments. It includes managing provider portals, organizations, integrations, governance policies, resource deployments, automation workflows, blueprints, and orchestrator components.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Operation Management: This section focuses on monitoring and managing operational aspects of VMware Cloud Foundation Automation. It includes using VMware operations tools to monitor automation services, provider management, and organizational environments.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This section focuses on understanding fundamental IT architectures, technologies, and industry standards that support VMware Cloud Foundation environments. It ensures candidates understand the foundational concepts required to design and manage automated cloud infrastructure solutions.</li> </ul>

## 100% Pass Quiz 2026 Newest 3V0-21.25: Advanced VMware Cloud Foundation 9.0 Automation Reliable Test Braindumps

The Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) exam preparation material is available in three different formats for the customers. The formats are PDF format, web-based software, and VMware 3V0-21.25 desktop practice exam software. The portable PDF format means customers can access real Advanced VMware Cloud Foundation 9.0 Automation (3V0-21.25) exam questions on their smartphones, tablets, and laptops. The PDF format can be printed and customers can also make proper 3V0-21.25 exam notes.

### VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q34-Q39):

#### NEW QUESTION # 34

An administrator has been tasked with deploying an AllApps Organization within VMware Cloud Foundation (VCF) Automation. During the regional networking creation step, which three NSX constructs will automatically be configured? (Choose three.)

- A. A Virtual Private Cloud (VPC) connectivity profile.
- B. A Provider Tier-0 Gateway.
- C. A Virtual Distributed Switch (VDS).
- D. An NSX Transit Gateway.
- E. A Default Virtual Private Cloud (VPC).

**Answer: A,D,E**

#### Explanation:

When creating a Region for an AllApps Organization in VCF 9.0, the automation engine orchestrates several critical NSX networking components to enable multi-tenancy. The NSX Transit Gateway is deployed to provide the underlying routing backbone that connects different VPCs and external services within the region. Simultaneously, a Default VPC is instantiated for the organization, providing an out-of-the-box isolated environment where developers can immediately begin deploying workloads. To govern how this VPC and others interact with the broader network, a VPC Connectivity Profile is created. This profile defines the "Guardrails" for the organization, such as whether VPCs are strictly isolated (Private - TGW) or have external access. Unlike manual networking setups, these steps are automated during the Region-to-Organization mapping process, ensuring that the necessary multi-tenant infrastructure is consistent and ready for use without manual Tier-1 gateway or segment configuration by the administrator.

### NEW QUESTION # 35

Which VCF component is responsible for the automated lifecycle management (patching and upgrading) of the VCF Automation and VCF Operations appliances?

- A. SDDC Manager
- B. VMware Aria Suite Lifecycle
- C. vSphere Lifecycle Manager (vLCM)
- D. VCF Operations Orchestrator

**Answer: A**

Explanation:

In VCF 9.0, SDDC Manager is the centralized "source of truth" and lifecycle engine for the entire software- defined data center. While older versions of the stack relied on multiple standalone lifecycle managers, VCF 9.0 continues to consolidate these functions. SDDC Manager handles the end-to-end patching and upgrading of the management components, including the VCF Automation and VCF Operations appliances. It ensures that all components remain within a "Validated Solution" versioning matrix, preventing compatibility issues that could arise from manual upgrades. SDDC Manager orchestrates the download of bundles, performs pre- checks, and manages the non-disruptive rolling upgrades of these services, allowing the administrator to maintain a secure and up-to-date private cloud with minimal manual intervention.

### NEW QUESTION # 36

An Organization Administrator for an AllApps Organization in VMware Cloud Foundation (VCF) Automation must determine which networks are used by deployed workloads.

How does the administrator view the networks?

- A. VPCs and connectivity profile assignments are visible in the Organization Portal, but the underlying NSX Tier-1 gateways and segments are not.
- B. The NSX segments mapped to each workload are visible by expanding deployment details for each deployed workload in the Organization Portal.
- C. VPCs, connectivity profiles and the associated NSX segment and Tier-1 gateway details can be retrieved with `vcf-cli deployment get`.
- D. The NSX Tier-1 gateway mappings for each workload in the Organization can be retrieved with `kubectl get vm`.

**Answer: A**

Explanation:

The AllApps (AllApps) organization model in VCF 9.0 is built on the principle of high-level abstraction to simplify the developer experience. In this model, the Organization Portal presents networking through the lens of Virtual Private Clouds (VPCs) and Connectivity Profiles. The Organization Administrator can easily view which VPC a workload belongs to and what connectivity policies (such as public access or isolation) are applied. However, the underlying NSX implementation details—such as the specific Tier-1 gateways and segments automatically created by the Supervisor—are intentionally abstracted away from the organization-level view. This "cloud-style" visibility ensures that tenants can manage their application networking without being burdened by the complexity of the provider's physical or logical NSX fabric, which remains the exclusive domain of the Provider Administrator.

### NEW QUESTION # 37

A customer has a requirement to register a resource with an external service during provisioning in a VMApps Organization. The requirements are:

- \* the registration cannot cause provisioning to fail.
- \* the registration or failure will only be logged in the external service.

What two constructs satisfy the requirements? (Choose two.)

- A. Non-blocking event broker subscription.
- B. Blocking event broker subscription.
- C. Bash script on the template.
- D. ABX action.
- E. Cloud-init stanza in the blueprint.

**Answer: A,D**

Explanation:

To satisfy the requirement that a registration task must not impact the success of the overall deployment, a Non-blocking event broker subscription must be used. In VCF Automation 9.0, a "Blocking" subscription pauses the provisioning process until the extensibility task completes, allowing the workflow to fail the deployment if the task returns an error. Conversely, a "Non-blocking" subscription operates asynchronously; the platform fires the event and immediately continues with the VM lifecycle regardless of the task's outcome.

An Action-Based Extensibility (ABX) action is the ideal lightweight serverless function to execute this registration logic, as it can be easily configured to run in response to the event trigger without the overhead of a full orchestrator workflow. By combining these two, the administrator ensures that the external registration is attempted, and any successes or failures are handled purely within the context of that action and the external service, fulfilling the customer's logging and failure-tolerance requirements.

### NEW QUESTION # 38

A customer requires a backup of blueprints within VMware Cloud Foundation (VCF) Automation to a third- party solution each time the blueprint is released.

What construct will satisfy the requirement?

- A. Velero service
- B. CloudConfig
- C. Event broker subscription
- D. ArgoCD service

**Answer: C**

Explanation:

To automate the export or backup of Blueprints (Cloud Templates) in VCF 9.0, the Event Broker Service (EBS) is the required mechanism. While Velero (Option A) is used for backing up vSphere Pods and ArgoCD (Option C) is for continuous delivery, neither is designed to "listen" for internal automation metadata changes.

By creating an Event Broker Subscription mapped to the "Blueprint Released" or "Template Version Created" topic, the administrator can trigger an action every time a developer finalizes a new version of their infrastructure code. This triggered action (typically an ABX or Orchestrator task) can then programmatically retrieve the YAML definition of the blueprint via the VCF Automation API and push it to an external third- party storage solution or a secondary Git repository for long-term archival and backup. This ensures that the organization maintains a complete, off-appliance history of its infrastructure designs, satisfying auditing and disaster recovery requirements.

### NEW QUESTION # 39

.....

If you really intend to grow in your career then you must attempt to pass the 3V0-21.25 exam, which is considered as most esteemed and authoritative exam and opens several gates of opportunities for you to get a better job and higher salary. But passing the 3V0-21.25 exam is not easy as it seems to be. With the help of our 3V0-21.25 Exam Questions, you can just rest assured and take it as easy as pie. For our 3V0-21.25 study materials are professional and specialized for the exam. And you will be bound to pass the exam as well as get the certification.
