- A. np
- B. individual and moving range
- C. p
- D. c
- E. x-bar and R
- F. u
- G. median

**Answer: B**

### NEW QUESTION # 192

A Personal Trainer was assessing her workout class participants for their body fat content and had to include data for her analysis. One of the columns listed the range of weight of the people included in the studies. This required plotting a Histogram of the weight of the people assessed for their body fat content. While drawing the Histogram the x-axis contained a certain scale of data. Pick the scale of data that is appropriate for Histograms.

- A. Interval Scale Data
- B. Ordinal Scale Data
- C. Ration Scale Data
- D. Nominal Scale Data

**Answer: A**

### NEW QUESTION # 193

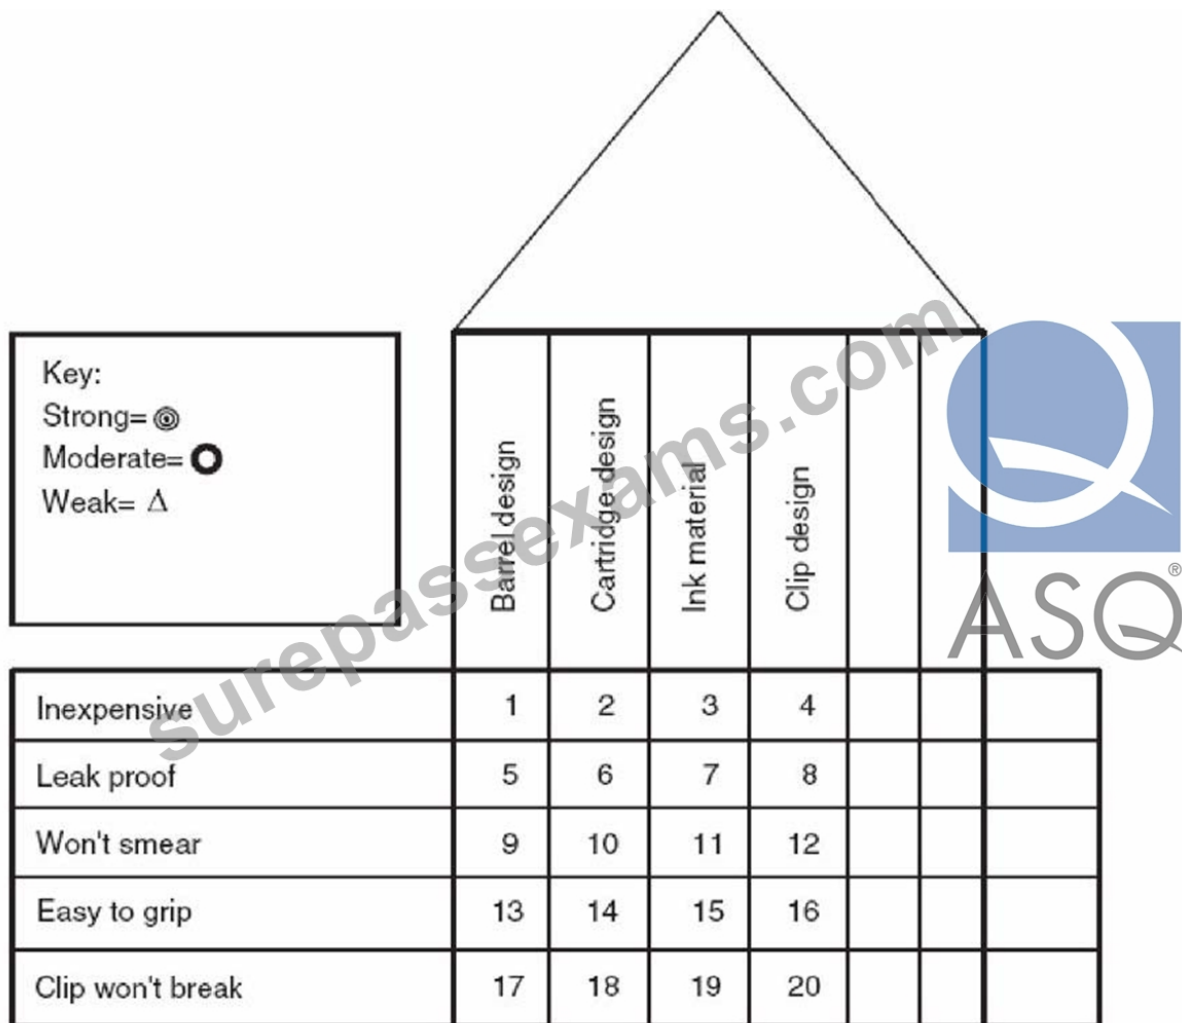

A Factorial Experiment based on a Level 2 Design with 4 factors would require 16 runs to fully assess the interactions.

- A. True
- B. False

**Answer: A**

### NEW QUESTION # 194

This QFD matrix was used in the design process for a ball point pen. What symbol is appropriate for the square labeled 11?

**Answer:**

**NEW QUESTION # 195**

Which of the following measurement scales classifies data into categories with no implied order?

- A. Nominal
- B. Ordinal
- C. Ratio
- D. Interval

**Answer: A**

Explanation:

The correct answer is D. Nominal . The CSSBB material defines nominal data as data consisting of names or categories only and explicitly states that no ordering scheme is possible . This is the exact wording needed to answer the question. Examples include labels such as colors, departments, shipping codes, or product categories where the values are simply different classes, not ranked positions.

By contrast, ordinal data do have an implied order, even though the differences between values may not be meaningful. Interval data have ordered values with meaningful differences but no true zero, and ratio data extend interval data by including an inherent zero so ratios are meaningful. The CSSBB table of measurement scales clearly distinguishes these four types. Therefore, when the question asks for the scale that classifies data into categories with no implied order, the correct and verified answer is D. Nominal .

**NEW QUESTION # 196**
