### NEW QUESTION # 408

On an OSPF or IS-IS network, the filter-policy import command can be run on a router to filter out the LSAs forwarded by its neighbors.

- A. TRUE
- B. FALSE

**Answer: B**

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

1. Understanding LSA Filtering in OSPF and IS-IS:

\* The filter-policy command is used in OSPF and IS-IS to control which routing information is imported into the local routing table or advertised to other neighbors.

\* However, it cannot filter LSAs forwarded by neighbors. In OSPF and IS-IS, LSAs are always forwarded unchanged within the area to ensure all routers have a consistent link-state database.

\* Filtering only affects the routes that are installed into the local routing table or advertised to other areas or neighbors.

2. Why the Statement is False:

\* LSAs are forwarded without being filtered. This ensures link-state protocols maintain the same network topology view across the network.

\* The filter-policy import command only controls routes that are installed into the local routing table, not the forwarding of LSAs.

3. Summary:

\* The statement is FALSE because LSAs cannot be filtered by filter-policy import.
