P.S. Free 2026 CheckPoint 156-536 dumps are available on Google Drive shared by TestkingPDF: <https://drive.google.com/open?id=1mOwcqFfFKq-ObsMwQqlSbPu9oT-up5P8>

TestkingPDF Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) Questions have numerous benefits, including the ability to demonstrate to employers and clients that you have the necessary knowledge and skills to succeed in the actual 156-536 exam. Certified professionals are often more sought after than their non-certified counterparts and are more likely to earn higher salaries and promotions. Moreover, cracking the Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) exam helps to ensure that you stay up to date with the latest trends and developments in the industry, making you more valuable assets to your organization.

How our 156-536 study questions can help you successfully pass your coming 156-536 exam? The answer lies in the outstanding 156-536 exam materials prepared by our best industry professionals and tested by our faithful clients. Our exam materials own the most authentic and useful information in questions and answers. For our 156-536 practice material have been designed based on the format of real exam questions and answers that you would surely find better than the other exam vendors'.

Free PDF Quiz High-quality CheckPoint - 156-536 - Pass Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Guide

We have designed a chat window below the web page. Once you want to ask some questions about the 156-536 training engine, you can click the little window. Then you just need to click the buttons after writing your email address and your questions about the 156-536 Exam Questions. Our back operation system will soon receive your email; then you will get a quick feedback on the 156-536 practice braindumps from our online workers.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q81-Q86):

NEW QUESTION # 81

What blades have to be enabled on the Management Server in order for the Endpoint Security Management Server to operate?

- A. You can enable all gateway related blades.
- B. The SmartEndPoint super Node on the Management.
- C. The administrator has to enable compliance and Network Policy Management.
- D. **Logging & Status, SmartEvent Server, and SmartEvent Correlation unit must be enabled.**

Answer: D

NEW QUESTION # 82

When using User Logon Pre-boot Remote Help, the following assistance is provided

- A. Only Remote Password Change
- B. Only One-Time Logon
- C. **One-Time Logon and Remote Password Change**
- D. Cleartext Password

Answer: C

NEW QUESTION # 83

With which release of Endpoint Client is the Anti-Malware engine based on Sophos instead of Kaspersky?

- A. Endpoint Client release E86.26 and higher for Cloud deployments
- B. Endpoint Client release E81.20 and higher for On-premises deployments
- C. **Endpoint Client release E84.40 and higher for all deployments**
- D. Endpoint Client release E83.20 and higher for Cloud deployments

Answer: C

Explanation:

The transition of the Anti-Malware engine from Kaspersky to Sophos in the Check Point Harmony Endpoint Client occurred with the release of Endpoint Client E84.40 and higher, and this change applies universally to all deployments, including both Cloud and On-premises environments. While the CP_R81.

20_Harmony_Endpoint_Server_AdminGuide.pdf does not explicitly detail the exact version of this switch within its text, it provides general information about the Anti-Malware component on page 311 under the

"Anti-Malware" section, stating that it "protects clients from known and unknown viruses, worms, Trojan horses, adware, and keystroke loggers." The lack of a specific version mention in the document suggests that this information aligns with broader Check Point product knowledge and release notes external to this specific administration guide. Among the options provided, option B (E84.40 and higher for all deployments) is the most accurate and comprehensive, as it does not limit the change to specific deployment types (e.g., Cloud or On-premises), unlike options A, C, and D. This reflects a logical deduction based on typical product evolution timelines and option analysis, ensuring applicability across all Harmony Endpoint deployments.

NEW QUESTION # 84

The Check Point Harmony Product Suite is a suite of security products that includes?

- A. Quantum Spark
- B. Quantum Endpoint (Cloud)
- C. **Harmony Endpoint (Cloud and On-Premises)**
- D. Harmony Mobile (On-Premises)

Answer: C

NEW QUESTION # 85

You must make a decision of which FDE algorithm to be used by one of your clients who specializes in multimedia video editing. What algorithm will you choose?

- A. In multimedia applications you do not need to implement any kind of Full Disk Encryption. You can use software like 7Zip in order to encrypt your data.
- B. Video processing is a high bandwidth application which utilizes a lot of HDD access time. You have to use a FDE algorithm with small secret key like XTS-AES 128 bit.
- C. Any kind of data is very important and the Full Disk Encryption technique must be used with the strongest secret key possible. Your client has to use strong encryption like XTS-AES 256 bit.
- D. The implementation of a Secure VPN with very strong encryption will make your data invisible in cases of live internet transmission.

Answer: C

Explanation:

For a client specializing in multimedia video editing, the recommended Full Disk Encryption (FDE) algorithm is XTS-AES 256 bit. The CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf emphasizes the importance of strong encryption for securing sensitive data. On page 217, under "Check Point Full Disk Encryption," it states: "Combines Pre-boot protection, boot authentication, and strong encryption to make sure that only authorized users are given access to information stored on desktops and laptops." Additionally, on page 221, under "Self-Encrypting Drives," it discusses the use of robust encryption, noting that FDE ensures data security with strong algorithms. While the guide does not explicitly list "XTS-AES 256 bit" as the only option, it aligns with industry standards for the strongest encryption (256-bit key size), and Check Point's focus on security over performance trade-offs supports this choice.

Multimedia video editing involves large, sensitive files, and the guide does not suggest compromising encryption strength for performance. Instead, it prioritizes data protection, making XTS-AES 256 bit the best choice for this scenario.

* Option A ("Secure VPN with very strong encryption") is irrelevant, as it addresses network transmission, not FDE for local storage.

* Option B ("No need for FDE, use 7Zip") contradicts the guide's emphasis on FDE for data security (page 217), as file-level encryption like 7Zip does not protect the entire disk.

* Option D ("XTS-AES 128 bit for performance") suggests a weaker key size for performance, but the documentation does not endorse reducing encryption strength; it prioritizes security (page 221).

* Option C ("XTS-AES 256 bit") aligns with the guide's focus on strong encryption and the need to protect all data, making it the correct choice.
