Salesforce Analytics-Admn-201시험덤프데모, Analytics-Admn-201 100％시험패스공부자료

그리고 Pass4Test Analytics-Admn-201 시험 문제집의 전체 버전을 클라우드 저장소에서 다운로드할 수 있습니다: https://drive.google.com/open?id=1i-uh_zZ5YOU1QsmYgmgT5D-52QgCTK7i

지금 같은 경쟁력이 심각한 상황에서Salesforce Analytics-Admn-201시험자격증만 소지한다면 연봉상승 등 일상생활에서 많은 도움이 될 것입니다.Salesforce Analytics-Admn-201시험자격증 소지자들의 연봉은 당연히Salesforce Analytics-Admn-201시험자격증이 없는 분들보다 높습니다. 하지만 문제는Salesforce Analytics-Admn-201시험패스하기가 너무 힘듭니다. Pass4Test는 여러분의 연봉상승을 도와 드리겠습니다.

Salesforce Analytics-Admn-201 시험요강:

주제	소개
주제 1	• Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
주제 2	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

주제 3	• Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
주제 4	• Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
주제 5	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Analytics-Admn-201 100％시험패스 공부자료, Analytics-Admn-201최신버전 덤프공부문제

Pass4Test의 Salesforce Analytics-Admn-201덤프를 공부하면 100% Salesforce Analytics-Admn-201 시험패스를 보장해드립니다. 만약 Salesforce Analytics-Admn-201 덤프자료를 구매하여 공부한후 시험에 탈락할시 불합격성적표와 주문번호를 메일로 보내오시면 덤프비용을 바로 환불해드립니다. 저희 Pass4Test Salesforce Analytics-Admn-201덤프로 자격증부자되세요.

최신 Salesforce Administrator Analytics-Admn-201 무료샘플문제 (Q34-Q39):

질문 # 34
Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance ziplogs
- B. tsm maintenance cleanup
- C. tsm maintenance restore
- D. tsm maintenance backup

정답：A,B

설명：
TSM commands manage Tableau Server maintenance-let's validate their syntax:
* Command Requirements:
* Some need arguments (e.g., file paths); others are standalone.
* Valid and Complete: Must work as-is without errors.
* Option C (tsm maintenance cleanup): Correct.
* Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).
* Use: tsm maintenance cleanup-runs fully.
* Option D (tsm maintenance ziplogs): Correct.
* Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).
* Use: tsm maintenance ziplogs-complete and valid.
* Option A (tsm maintenance backup): Incorrect.
* Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.

* Option B (tsm maintenance restore): Incorrect.
* Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.
Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.
Reference: Tableau Server Documentation - "TSM Maintenance Commands" (https://help.tableau.com/current /server/en-us/cli_maintenance_tsm.htm).

질문 # 35
Which three items can be contained in a project? (Choose three.)

- A. Groups
- B. Workbooks
- C. Data Sources
- D. Nested Projects

정답：B,C,D

설명：
In Tableau Server, projects are containers for organizing and securing content. They help manage permissions and structure content hierarchically. Let's define what can be contained:
* Workbooks: Visualizations and dashboards published to the Server.
* Data Sources: Published connections or extracts reusable across workbooks.
* Nested Projects: Sub-projects within a parent project, introduced in later versions (e.g., 2018.2) for deeper organization.
* Option B (Workbooks): Correct. Workbooks are the primary content type in projects, containing views and dashboards.
* Option C (Nested Projects): Correct. Nested projects allow hierarchical structuring (e.g., a "Sales" project with "Q1" and "Q2" sub-projects), with inherited or custom permissions.
* Option D (Data Sources): Correct. Published data sources reside in projects, providing reusable data connections.
* Option A (Groups): Incorrect. Groups are collections of users managed at the site or server level, not stored within projects. Projects contain content, not user entities.
Why This Matters: Projects are key to content governance-knowing what they hold helps administrators organize and secure assets effectively.
Reference: Tableau Server Documentation - "Projects" (https://help.tableau.com/current/server/en-us/projects. htm).

질문 # 36
What should you use to set a preferred active repository?

- A. The TSM browser client's Maintenance page
- B. A tsm configuration set command
- C. A tabcmd set command
- D. The TSM browser client's Configuration Topology page

정답：B

설명：
Tableau Server uses a PostgreSQL database as its repository to store metadata, user information, and permissions. In a high-availability (HA) setup with multiple nodes, there are typically two repository instances: one active and one passive. The "preferred active repository" refers to designating which repository instance should take priority as the active one. This is managed through Tableau Services Manager (TSM).
The correct method to set the preferred active repository is by using the tsm configuration set command.
Specifically, you would use a command like:
tsm configuration set -k pgsql.preferred_host -v <hostname>
This command allows an administrator to specify the preferred host for the active repository, ensuring control over which node takes precedence in an HA environment.
Option B (tabcmd set command) is incorrect because tabcmd is a command-line utility primarily used for administrative tasks like managing users, groups, and content (e.g., publishing workbooks), not for configuring server topology or repository settings.
Option C (TSM browser client's Maintenance page) is incorrect because the Maintenance page in the TSM web interface is used for tasks like backups, restores, and cleanup, but it does not provide an option to set the preferred active repository.
Option D (TSM browser client's Configuration Topology page) is partially relevant since the Topology page displays the current configuration of services across nodes, including the repository. However, it does not allow direct modification of the preferred

active repository; this must be done via the tsm command line.
Reference: Tableau Server Documentation - "Configure Tableau Server Repository" (https://help.tableau.com/current/server/en-us/repository.htm) and "TSM Command Line Reference" (https://help.tableau.com/current/server/en-us/cli_configuration_set.htm).

질문 # 37
What two events must occur for Tableau Server to recompute queries for a workbook cache after a scheduled refresh? (Choose two.)

- A. The workbook has upcoming scheduled refresh tasks
- B. The All Users group has a permission rule allowing access to the workbook
- C. The workbook has been viewed recently
- D. The workbook was published in the last month

정답：A,C

설명：
Tableau Server uses caching to speed up workbook loading by storing query results. After a scheduled extract refresh updates the data, the cache may need recomputing-let's dive into the mechanics:
* Caching Basics:
* VizQL Cache: Stores rendered views and query results for faster access.
* Refresh Trigger: A scheduled refresh updates the underlying extract (.hyper), but the cache isn't automatically invalidated-it's demand-driven.
* Recompute Conditions: Tableau recomputes the cache when the workbook is accessed (viewed) and its data has changed (e.g., via refresh).
* Evaluation:
* Option B (The workbook has upcoming scheduled refresh tasks): Correct.
* Why: An upcoming refresh task indicates the workbook relies on an extract with a schedule. After the refresh runs, the data changes, priming the cache for recomputation on next view. Without a schedule, no refresh occurs, so this is a prerequisite.
* Detail: Schedules are set in Schedules > Tasks-e.g., "Daily at 2 AM."
* Option D (The workbook has been viewed recently): Correct.
* Why: Viewing triggers cache recomputation if the data has changed (e.g., post-refresh).
Tableau uses a "lazy caching" model-cache updates only when a user loads the workbook, ensuring fresh results.
* Detail: "Recently" isn't strictly defined but implies post-refresh access.
* Option A (Published in the last month): Incorrect.
* Why: Publish date is irrelevant-cache recomputation ties to data changes and access, not publication timing.
* Option C (All Users group has permission rule allowing access): Incorrect.
* Why: Permissions enable viewing, but recomputation requires actual access (viewing) and a refresh event, not just potential access.
Why This Matters: Caching balances performance and freshness-understanding triggers prevents stale data surprises.
Reference: Tableau Server Documentation - "Caching and Performance" (https://help.tableau.com/current/server/en-us/perf_cache.htm).

질문 # 38
A user named John publishes a workbook named Sales Quota to a project named Sales. The All Users group has the View and Download Workbook/Save As capabilities only to the Sales project. A user named Sandy has the Explorer (can publish) site role, on the Sales Quota workbook. No other users or groups have permissions to the Sales project. The Sales project is set to Managed by the owner. What are the effective rights for Sandy?

- A. All of the capabilities associated with the Editor rule
- B. The same rights as John
- C. No access
- D. View and Download Workbook/Save As

정답：D

질문 # 39
