Exam ACD201 Questions - Vce ACD201 Exam

We know deeply that a reliable ACD201 exam material is our company's foothold in this competitive market. High accuracy and high quality are the most important things we always looking for. Compared with the other products in the market, our ACD201

latest questions grasp of the core knowledge and key point of the real exam, the targeted and efficient ACD201 study training dumps guarantee our candidates to pass the test easily. Passing exam won't be a problem anymore as long as you are familiar with our ACD201 exam material (only about 20 to 30 hours practice).

Appian Senior Developer Sample Questions (Q26-Q31):

NEW QUESTION # 26

A recent Health Check report of your application indicates an increased risk of large context size in the interfaces. What are two possible contributors to this risk? (Choose two.)

- A. The load variable has a web service response as JSON.
- B. Local variables are set to refresh every five minutes.
- C. Multiple local variables hold duplicate data.
- D. Data transformation is performed inside the interface rather than delegated to the source system.

Answer: C,D

Explanation:

Performing data transformation inside the interface can increase the amount and size of context data stored, raising context size risk. Multiple local variables holding duplicate data unnecessarily inflate the interface's memory footprint, contributing to large context size.

NEW QUESTION # 27

Your client wants their customers to be able to schedule appointments directly from their website without going to an Appian user environment.

You need to build an embedded interface to be added to your client's web page. The style of the embedded interface should be consistent with the host web page.

Which three custom styling options can be configured in the Themes section of embedded interfaces? (Choose three.)

- A. Two or three column layout
- B. Asymmetrical layout
- C. Page background color
- D. Web font stylesheet URL
- E. Font Family

Answer: C,D,E

Explanation:

Page background color - You can customize the background color to match the host webpage's theme.

Font family - You can set the font family to ensure the embedded interface aligns with the client's branding.

Web font stylesheet URL - This allows the use of custom web fonts, further aligning the style with the host site.

NEW QUESTION # 28

An insurance company's product details are currently distributed across numerous database tables, encompassing over 60 to 70 fields.

You need to implement a product comparison tool for business users to compare up to three insurance products simultaneously, with all the product details in a tabular format.

Refer to the following sample format:

Attribute	PRODUCT 1	PRODUCT 2	PRODUCT 3
Name			
Type			
Premium			
Average			
Claim time			

Which object should be used to transform the data into the required format?

- A. Record type with relationships
- B. VCCCiews
- C. Stored procedure

Answer: B

Explanation:

Database views are ideal for transforming complex, distributed product data into a single, flattened structure tailored for reporting or comparison. In this case, a view can pivot the 60-70 fields and organize them by attribute (e.g., Name, Type, Premium) across multiple product columns, enabling a tabular comparison layout like the one shown. Views also optimize performance and reduce transformation overhead in the interface layer.

NEW QUESTION # 29

The synced record Task has a self-referential relationship defined in the column parentTaskId. There is a many-to-one record relationship between the id and parentTaskId called parentTask.

For a given task ID, you need to return the task name and the parent task name.

What should you do?

- A. Create a sync-time custom record field on the Task record called parentName. Specify this field to return in the query field selection.
- B. Use a!queryRecordType() filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.
- C. Use a!queryRecordType() With a filter on the task id, with fields specified to return recordType!Task.name and recordType!Task.parentTask.name.

Answer: C

Explanation:

A single a!queryRecordType() call filtered by the task's id and selecting both recordType!Task.name and recordType!Task.parentTask.name leverages the existing self-referential relationship, returning the task name and its parent's name in one efficient query without additional custom fields or extra queries.

NEW QUESTION # 30

You need to configure Appian user authentication against an external directory server. The requirement is to use the same corporate logon information without single sign-on (SSO).

Which authentication type should you use?

- A. OpenID Connect authentication
- B. PIEE user authentication
- C. LDAP authentication

Answer: C

Explanation:

LDAP authentication allows users to log in with their corporate credentials by authenticating against an external directory server, without requiring single sign-on (SSO).

NEW QUESTION # 31

.....

In order to help these people who have bought the ACD201 study materials of our company, There is a team of expert in our company, which is responsible to renovate and update the ACD201 study materials provided by our company.
