Palo Alto Networks XDR-Analyst Practice Test Prepare for Success

Some candidates may want to get the XDR-Analyst exam braindumps as soon as possible after they buying it, if you also want to get the XDR-Analyst exam braindumps quickly, we can do it for you. You pay for the XDR-Analyst exam dumps, we will send you the downloading link and password to you about five to ten minutes by email. What's more our XDR-Analyst Exam Braindumps is of high quality, it will help you to pass the exam successfully.

Palo Alto Networks XDR Analyst Sample Questions (Q90-Q95):

NEW QUESTION # 90

What is the action taken out by Managed Threat Hunting team for Zero Day Exploits?

- **A. MTH researches for threats in the tenant and generates a report with the findings.**
- B. MTH researches for threats in the logs and reports to engineering.
- C. MTH pushes content updates to prevent against the zero-day exploits.
- D. MTH runs queries and investigative actions and no further action is taken.

Answer: A

Explanation:

The Managed Threat Hunting (MTH) team is a group of security experts who proactively hunt for threats in the Cortex XDR tenant and generate a report with the findings. The MTH team uses advanced queries and investigative actions to identify and analyze potential threats, such as zero-day exploits, that may have bypassed the prevention and detection capabilities of Cortex XDR. The MTH team also provides recommendations and best practices to help customers remediate the threats and improve their security posture. Reference:

NEW QUESTION # 91

What is the maximum number of agents one Broker VM local agent applet can support?

- **A. 10,000**
- B. 5,000
- C. 15,000
- D. 20,000

Answer: A

Explanation:

The Broker VM is a virtual machine that you can deploy in your network to provide various services and functionalities to the Cortex XDR agents. One of the services that the Broker VM offers is the Local Agent Settings applet, which allows you to configure the agent proxy, agent installer, and content caching settings for the agents. The Local Agent Settings applet can support a maximum number of 10,000 agents per Broker VM. If you have more than 10,000 agents in your network, you need to deploy additional Broker VMs and distribute the load among them. Reference:

Broker VM Overview: This document provides an overview of the Broker VM and its features, requirements, and deployment options.

Configure the Broker VM: This document explains how to install, set up, and configure the Broker VM in an ESXi environment.

Manage Broker VM from the Cortex XDR Management Console: This document describes how to activate and manage the Broker VM applets from the Cortex XDR management console.

NEW QUESTION # 92

What is an example of an attack vector for ransomware?

- A. Performing SSL Decryption on an endpoint
- **B. Phishing emails containing malicious attachments**
- C. Performing DNS queries for suspicious domains
- D. A URL filtering feature enabled on a firewall

Answer: B

Explanation:

An example of an attack vector for ransomware is phishing emails containing malicious attachments. Phishing is a technique that involves sending fraudulent emails that appear to come from a legitimate source, such as a bank, a company, or a government agency. The emails typically contain a malicious attachment, such as a PDF document, a ZIP archive, or a Microsoft Office document, that contains ransomware or a ransomware downloader. When the recipient opens or downloads the attachment, the ransomware is executed and encrypts the files or data on the victim's system. The attacker then demands a ransom for the decryption key, usually in cryptocurrency.

Phishing emails are one of the most common and effective ways of delivering ransomware, as they can bypass security measures such as firewalls, antivirus software, or URL filtering. Phishing emails can also exploit the human factor, as they can trick the recipient

into opening the attachment by using social engineering techniques, such as impersonating a trusted sender, creating a sense of urgency, or appealing to curiosity or greed. Phishing emails can also target specific individuals or organizations, such as executives, employees, or customers, in a technique called spear phishing, which increases the chances of success.

According to various sources, phishing emails are the main vector of ransomware attacks, accounting for more than 90% of all ransomware infections¹². Some of the most notorious ransomware campaigns, such as CryptoLocker, Locky, and WannaCry, have used phishing emails as their primary delivery method³. Therefore, it is essential to educate users on how to recognize and avoid phishing emails, as well as to implement security solutions that can detect and block malicious attachments. Reference:

NEW QUESTION # 93

What kind of the threat typically encrypts user files?

- A. supply-chain attacks
- **B. ransomware**
- C. Zero-day exploits
- D. SQL injection attacks

Answer: B

Explanation:

Ransomware is a type of malicious software, or malware, that encrypts user files and prevents them from accessing their data until they pay a ransom. Ransomware can affect individual users, businesses, and organizations of all kinds. Ransomware attacks can cause costly disruptions, data loss, and reputational damage. Ransomware can spread through various methods, such as phishing emails, malicious attachments, compromised websites, or network vulnerabilities. Some ransomware variants can also self-propagate and infect other devices or networks. Ransomware authors typically demand payment in cryptocurrency or other untraceable methods, and may threaten to delete or expose the encrypted data if the ransom is not paid within a certain time frame. However, paying the ransom does not guarantee that the files will be decrypted or that the attackers will not target the victim again. Therefore, the best way to protect against ransomware is to prevent infection in the first place, and to have a backup of the data in case of an attack¹²³⁴⁵⁶ Reference:

NEW QUESTION # 94

What license would be required for ingesting external logs from various vendors?

- A. Cortex XDR Pro per Endpoint
- B. Cortex XDR Vendor Agnostic Pro
- **C. Cortex XDR Pro per TB**
- D. Cortex XDR Cloud per Host

Answer: C

Explanation:

To ingest external logs from various vendors, you need a Cortex XDR Pro per TB license. This license allows you to collect and analyze logs from Palo Alto Networks and third-party sources, such as firewalls, proxies, endpoints, cloud services, and more. You can use the Log Forwarding app to forward logs from the Logging Service to an external syslog receiver. The Cortex XDR Pro per Endpoint license only supports logs from Cortex XDR agents installed on endpoints. The Cortex XDR Vendor Agnostic Pro and Cortex XDR Cloud per Host licenses do not exist.
