Exam 220-1201 Overviews & Lab 220-1201 Questions

First and foremost, you can get the latest version of our 220-1201 study materials for free during the whole year. Second, our responsible after sale service staffs are available in twenty four hours a day, seven days a week, so if you have any problem after purchasing 220-1201 study materials, you can contact our after sale service staffs anywhere at any time. Finally, we have installed the most advanced operation machines in our website, so you can use credit for payment in the process of trading and register your personal information under a safe payment environment. Do not waver any more, the most effective and the Latest 220-1201 Study Materials is right here waiting for you.

CompTIA A+ Core 1 Exam (2026) Sample Questions (Q449-Q454):

NEW QUESTION # 449

A computer displays an error message indicating there is insufficient storage when installing applications. The user reports slow application load times. Which of the following replacement components would best resolve this issue?

- A. SSD
- B. RAM
- C. HDD
- D. USB

Answer: A

Explanation:

Upgrading to a solid-state drive (SSD) provides more storage space and faster read/write speeds, which resolves both the "insufficient storage" error and slow application loads.

Option B (USB): Not intended for permanent application storage or performance improvements.

Option C (HDD): Could solve storage capacity but would not improve speed.

Option D (RAM): Affects multitasking and memory-intensive tasks, not storage capacity directly.

CompTIA A+ Core 1 Exam Objective Reference:

Objective 3.5: Given a scenario, troubleshoot problems related to storage devices.

NEW QUESTION # 450

A customer reports that the output from their thermal receipt printer has vertical white lines. Which of the following would most likely resolve this issue?

- A. Replacing the ink cartridge
- B. Using the correct paper type
- C. Cleaning the heating element
- D. Installing a maintenance kit

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Thermal printers create images using a heated print head on specially coated thermal paper. Vertical white lines indicate that part of the heating element is dirty or blocked, preventing heat transfer to the paper. Cleaning the print head (heating element) will restore full functionality.

* Option A: Thermal printers do not use ink or toner, so this is not applicable.

* Option B: Wrong paper could cause blank output, but consistent vertical lines point to the print head.

* Option C: Maintenance kits are typically for laser printers, not thermal printers.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 3.7: Given a scenario, troubleshoot common printer problems.

NEW QUESTION # 451

A technician must install a printer at a corporate office for all employees to use. Which of the following is the best option?

- A. Wi-Fi Direct
- B. Cloud printing

- C. Bluetooth printing
- **D. Print server**

Answer: D

Explanation:

A print server centrally manages print jobs and allows multiple employees to share the same printer over the corporate network. It provides better control, queue management, and access permissions than direct or ad hoc printing methods.

NEW QUESTION # 452

A small company wants the ability to print in full color but needs to pay a minimal initial purchase price for the printer. Which of the following is the best option?

- A. Laser printer
- B. Dot matrix printer
- C. Thermal printer
- **D. Inkjet printer**

Answer: D

Explanation:

Inkjet printers are the best choice for a small company seeking full-color printing with a minimal initial cost. While they have higher operating costs (due to ink), they are affordable and capable of high-quality color output.

Why Not A (Thermal printer): Thermal printers are not designed for color printing and are typically used for labels or receipts.

Why Not C (Dot matrix printer): Dot matrix printers are outdated, noisy, and do not support full-color printing.

Why Not D (Laser printer): Laser printers have lower running costs but a higher initial purchase price, especially for color models.

CompTIA A+ Exam Reference: Core 2 (220-1102), Section 4.6, printer types.

NEW QUESTION # 453

Which of the following types of RAM is typically used in servers?

- A. SODIMM
- B. DDR3
- C. Rambus
- **D. ECC**

Answer: D

Explanation:

ECC (Error-Correcting Code) RAM is commonly used in servers to provide error detection and correction, improving reliability in critical systems. It is designed to detect and correct single-bit errors, ensuring data integrity in environments where stability is paramount.

Option A (SODIMM): Incorrect. SODIMM is typically used in laptops, not servers.

Option B (Rambus): Incorrect. Rambus is an outdated RAM type and not commonly used today.

Option C (DDR3): Incorrect. While DDR3 is a type of RAM, it is not specific to servers and does not provide error correction.
