The Fortinet NSE7\_LED-7.0 exam dumps will include a detailed illustration of the topics and give you enough information about them. If you want to clear the Fortinet NSE7\_LED-7.0 certification exam, it is important to get the Fortinet NSE7\_LED-7.0 Exam Material first. The NSE7\_LED-7.0 test material is the only way to know where you stand.

Fortinet NSE7\_LED-7.0 Certification Exam is essential for network professionals who want to demonstrate their expertise in LAN Edge solutions. Fortinet NSE 7 - LAN Edge 7.0 certification exam provides a comprehensive understanding of Fortinet products, which includes the ability to configure, manage and troubleshoot complex network infrastructure. Additionally, this certification demonstrates the candidate's ability to work with other professionals to implement solutions that meet the needs of a business.

Fortinet NSE7\_LED-7.0 Exam consists of multiple-choice questions and simulations that test the candidate's knowledge of Fortinet's security solutions. NSE7\_LED-7.0 exam covers a wide range of topics, including network security design, implementation, and configuration, Fortinet's security solutions, and troubleshooting. NSE7\_LED-7.0 exam is designed to evaluate the candidate's ability to design and implement Fortinet's security solutions in a real-world scenario.

## NSE7\_LED-7.0 Exam Forum - NSE7\_LED-7.0 Free Vce Dumps

Are you often regretful that you have purchased an inappropriate product? Unlike other platforms for selling test materials, in order to make you more aware of your needs, NSE7\_LED-7.0 study materials provide sample questions for you to download for free. You can use the sample questions to learn some of the topics about NSE7\_LED-7.0 study materials and familiarize yourself with the NSE7\_LED-7.0 software in advance. If you feel that the NSE7\_LED-7.0 study materials are satisfying to you, you can choose to purchase our complete question bank. After the payment, you will receive the email sent by the system within 5-10 minutes. Click on the login to start learning immediately with NSE7\_LED-7.0 study materials. No need to wait.

### Fortinet NSE 7 - LAN Edge 7.0 Sample Questions (Q24-Q29):

#### NEW QUESTION # 24

Refer to the exhibits.

Firewall Policy

```
config firewall policy
  edit 11
    set name "Guest to Internal"
    set uuid c5e45130-aada-51e8-8e0c-bc1204f9f163
    set srcintf "guest"
    set dstintf "port3"
    set srcaddr "all"
    set dstaddr "FortiAuthenticator" "WindowsAD"
    set action accept
    set schedule "always"
    set service "ALL"
  next
end
```

Examine the firewall policy configuration and SSID settings

An administrator has configured a guest wireless network on FortiGate using the external captive portal. The administrator has verified that the external captive portal URL is correct. However, wireless users are not able to see the captive portal login page. Given the configuration shown in the exhibit and the SSID settings, which configuration change should the administrator make to fix the problem?

- A. Apply a guest.portal user group in the firewall policy with the ID 11.
- B. Enable the captive-portal-exempt option in the firewall policy with the ID 11.
- C. Include the wireless client subnet range in the Exempt Source section.
- D. Disable the user group from the SSID configuration.

**Answer: A**

Explanation:

Explanation

According to the FortiGate Administration Guide, "To use an external captive portal, you must configure a user group that uses the external captive portal as the authentication method and apply it to a firewall policy." Therefore, option C is true because it will allow the wireless users to be redirected to the external captive portal URL when they try to access the Internet. Option A is false because disabling the user group from the SSID configuration will prevent the wireless users from being authenticated by the FortiGate device. Option B is false because enabling the captive-portal-exempt option in the firewall policy will bypass the captive portal authentication for the wireless users, which is not the desired outcome. Option D is false because including the wireless client subnet range in the Exempt Source section will also bypass the captive portal authentication for the wireless users, which is not the desired outcome.

#### NEW QUESTION # 25

Which two statements about the MAC-based 802.1X security mode available on FortiSwitch are true?  
(Choose two.)

- A. FortiSwitch can grant different access levels to each device connected to the port
- B. FortiSwitch authenticates a single device and opens the port to other devices connected to the port
- C. FortiSwitch authenticates each device connected to the port
- D. It cannot be used in conjunction with MAC authentication bypass

**Answer: A,C**

Explanation:

According to the FortiSwitch Administration Guide, "MAC-based 802.1X security mode allows you to authenticate each device connected to a port using its MAC address as the username and password." Therefore, option B is true because it describes the MAC-based 802.1X security mode available on FortiSwitch. Option D is also true because FortiSwitch can grant different access levels to each device connected to the port based on the user group and security policy assigned to them. Option A is false because FortiSwitch does not authenticate a single device and open the port to other devices connected to the port, but rather authenticates each device individually. Option C is false because MAC-based 802.1X security mode can be used in conjunction with MAC authentication bypass (MAB) or EAP pass-through modes, which are fallback options for non-802.1X devices.

#### NEW QUESTION # 26

Which two pieces of information can the diagnose test authserver ldap command provide?  
(Choose two.)

- A. It displays whether the admin bind user credentials are correct
- B. It displays the LDAP groups found for the user
- C. It displays the LDAP codes returned by the LDAP server
- D. It displays whether the user credentials are correct

**Answer: B,D**

Explanation:

## Authentication Test Command

```
# diagnose test authserver ldap <server name> <username> <password>
```

Password visible in cleartext

```
# diagnose test authserver ldap Training-Lab jsmith password
authenticate 'jsmith' against 'Training-Lab' succeeded!
Group membership(s) - CN=Domain Users,CN=Users,DC=trainingAD,DC=training,DC=lab
```

Windows AD group membership returned

The CLI includes an LDAP authentication test command: `diagnose test authserver ldap`. If the credentials are correct, and if the LDAP configuration is correct, the LDAP server returns an authentication confirmation and a list of the user groups for that user.

You can run this test command as soon as you complete the LDAP server configuration, even before any user group or authentication firewall policy has been added to FortiGate. It tests only the LDAP server configuration and the LDAP communication between FortiGate and the server.

### NEW QUESTION # 27

An administrator has configured an SSID in bridge mode for corporate employees. All APs are online and provisioned using default AP profiles. Employees are unable to locate the SSID to connect. Which two configurations can the administrator verify? (Choose two)

- A. Verify that the Block Intra-SSID Traffic (intra-vap-privacy) option in the SSID configuration is disabled
- B. Verify that the SSID is applied to an AP group that should be broadcasting the SSID
- C. Verify that the SSID is manually applied on AP profiles for both 2.4 GHz and 5 GHz radios
- D. Verify that the broadcast SSID option is enabled in the SSID configuration

Answer: C,D

Explanation:

<https://community.fortinet.com/t5/FortiGate/Technical-Tip-How-to-enable-and-disable-broadcast-of-SSID/ta-p/191840>

### NEW QUESTION # 28

Which two statements about FortiSwitch manager are true? (Choose two)

- A. Any switch discovered or authorized on FortiGate must be added manually on FortiSwitch manager
- B. If the administrator makes any changes on FortiSwitch manager, they must also install those changes on FortiGate so that those changes are applied on the managed switches
- C. Per-device management is the default management mode on FortiManager
- D. FortiManager obtains the FortiSwitch status information by querying the FortiGate REST API every three minutes

Answer: B,D

Explanation:

Explanation

According to the FortiManager Administration Guide1, "FortiManager obtains the FortiSwitch status information by querying the FortiGate REST API every three minutes." Therefore, option B is true because it describes how FortiManager gets the information about the managed switches. According to the same guide2,

"If you make any changes in this module, you must install them on your managed device so that they are applied on your managed switches." Therefore, option C is true because it describes what the administrator must do after making any changes on FortiSwitch manager. Option A is false because central management is the default management mode on FortiManager, not per-device management. Option D is false because anyswitch discovered or authorized on FortiGate will be automatically added on FortiSwitch manager, not manually.
