Passing the Plat-Admn-301 test certification can help you stand out in your colleagues and have a bright future in your career.

### **Salesforce Certified Platform Administrator II Sample Questions (Q22-Q27):**

#### **NEW QUESTION # 22**

DreamHouse Realty currently deals only with single-family homes but is expanding its business it include condos in large cities. There are some features and amenities that inly apply to condos, such as the amount of a deposit and concierge services.

How should an administrator configure the Opportunity object to ensure that only relevant fields are displayed on the record?  
How should an administrator configure the Opportunity object to ensure that only relevant fields are displayed on the record?

- A. Build a Lightning component to display fields that only apply to condos.
- B. Make is custom Lightning page to display specific fields based on the type of property.
- C. Configure a validation rule to display fields based on the type of property the user is viewing.
- **D. Create a Record Type for the type of property and custom page layouts for each.**

**Answer: D**

Explanation:

A record type allows administrators to offer different business processes, picklist values, and page layouts to different users based on their profiles. By creating a record type for the type of property (single-family home or condo), DreamHouse Realty can assign different page layouts to each record type that display only relevant fields for each property type. The record type can also determine which sales process and path are available for each opportunity. References: [https://help.salesforce.com/s/articleView?id=sf.customize\\_recordtype.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.customize_recordtype.htm&type=5)

htm&type=5

#### **NEW QUESTION # 23**

AW Computers has enabled the feature for Contact to multiple Accounts. A rep is trying to remove the primary Account from a Contact but is unable to do so. The administrator has already updated the page layout to no longer require an Account.

What could be the issue?

- A. The Account Contact relationship record needs to be deleted first in order to disassociate the Contact from the Account.
- **B. A primary Account relationship is required on a Contact regardless of the page layout settings.**
- C. Private Contacts need to be enabled in Setup.
- D. The Contact has indirect relationships to other Accounts.

**Answer: B**

Explanation:

A primary account relationship is a feature that allows you to link a contact to a single account as its primary account. A primary account relationship is required on a contact regardless of the page layout settings or the contact to multiple accounts feature. This

means that you cannot remove the primary account from a contact, but you can change it to another account. You can also add secondary accounts to a contact if you have enabled the contact to multiple accounts feature. References: [https://help.salesforce.com/s/articleView?id=sf.contacts\\_multiple\\_accounts.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.contacts_multiple_accounts.htm&type=5) [https://help.salesforce.com/s/articleView?id=sf.contacts\\_fields.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.contacts_fields.htm&type=5)

#### NEW QUESTION # 24

The administrator at AW Computing has been asked to review whether any users are making configuration changes directly in production.

Which item should the administrator review to find these details?

- A. Login History
- **B. Setup Audit Trail**
- C. Organization-Wide Defaults
- D. Field History Tracking

**Answer: B**

Explanation:

The Setup Audit Trail is a tool that allows you to view and download a log of changes made in your org's Setup area. The log shows up to 20 fields of information for each change, such as who made it, when it was made, what type of change it was, and what values were changed. You can use the Setup Audit Trail to track configuration changes directly in production and identify any unauthorized or problematic changes.

#### NEW QUESTION # 25

The administrator at Universal Containers does a soft launch of the Salesforce Authenticator app and allows users to optionally use it to log in. The administrator would now like to look at how many users have successfully used it since it was rolled out.

What are two ways the administrator can get this information?

Choose 2 answers

- **A. Export Login History and filter based off of Authentication Method Reference,**
- **B. Create a new view in Identity Verification History, specifying Method.**
- C. Open the Login Access Policies in Setup which shows how many users are using MFA.
- D. Run a session setting report, specifying login methods by user.

**Answer: A,B**

Explanation:

Salesforce Authenticator is an app that adds an extra layer of security for logging into Salesforce by requiring users to verify their identity using their mobile device after entering their username and password on Salesforce login page. To see how many users have successfully used Salesforce Authenticator since it was rolled out, an administrator can use two methods:

\* A) Create a new view in Identity Verification History, specifying Method.

Identity Verification History is a tool that shows information about each identity verification event for users in your org, such as the date and time, the verification method used, the IP address, and the status of the verification. By creating a new view in Identity Verification History and specifying the method as Salesforce Authenticator, an administrator can see how many users have used the app to verify their identity when logging in. References: [https://help.salesforce.com/s/articleView?id=sf.identity\\_verification\\_history.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5)

\* D) Export Login History and filter based off of Authentication Method Reference.

Login History is a tool that shows information about each login attempt for users in your org, such as the date and time, the username, the source IP address, the login type, and the status of the login. By exporting Login History as a CSV file and filtering based on the Authentication Method Reference column, an administrator can see how many users have used Salesforce Authenticator as their authentication method when logging in.

References: [https://help.salesforce.com/s/articleView?id=sf.monitoring\\_login\\_history.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.monitoring_login_history.htm&type=5)

#### NEW QUESTION # 26

Cloud Kicks would like to reassign ownership of all leads that are open and more than 60 days old. The system administrator has

written an assignment rule to distribute these leads to the correct owners or queues.  
Which two tools should the administrator use to update the owner of these leads?  
Choose 2 answers

- A. Import Wizard
- B. Mass Update
- C. Bulk API
- D. Dataloader.io

**Answer: C,D**

Explanation:

Bulk API and Dataloader.io are both tools that can be used to update large numbers of records in Salesforce.

Bulk API is a RESTful API that allows you to create, update, delete, or query millions of records asynchronously by submitting batches of data. Dataloader.io is a web-based data loader tool that allows you to import, export, or delete data using a simple user interface.
