We are look forward to become your learning partner in the near future.

Microsoft PL-400 certification exam is designed for individuals who want to showcase their expertise in developing and customizing Microsoft Power Platform solutions. PL-400 exam tests candidates on their ability to work with Power Apps, Power Automate, Power Virtual Agents, and Power BI to create custom business solutions. Microsoft Power Platform Developer certification is intended for developers, technical consultants, and solution architects who work with the Power Platform.

To take the PL-400 exam, candidates should have a strong understanding of Power Platform technologies such as Power Apps, Power Automate, Power BI, and Power Virtual Agents. They should also have experience working with Microsoft Dynamics 365 and Microsoft Dataverse (formerly known as Common Data Service). PL-400 exam is intended for developers who have a minimum of two years of experience developing and extending Microsoft Power Platform solutions. Passing the PL-400 Exam demonstrates a developer's expertise in creating and deploying custom business applications, automating business processes, and analyzing data using the Power Platform.

Earning the Microsoft PL-400 certification demonstrates a candidate's proficiency in developing custom solutions with Microsoft Power Platform services. Successful candidates are recognized as Microsoft Certified: Power Platform Developer Associate, which is a globally recognized certification that validates their skills in building and maintaining Power Platform solutions. Microsoft Power Platform Developer certification can help professionals advance their careers and increase their earning potential by demonstrating their expertise to potential employers or clients.

### Microsoft Power Platform Developer Sample Questions (Q221-Q226):

#### NEW QUESTION # 221

A company has a development environment and a production environment. The production environment has several third-party managed and unmanaged solutions that made changes to the Contact main form.

You create a new solution in the development environment. You add the Contact entity and the Contact main form to the solution. You create a custom field on the Contact entity.

What happens when you perform these actions and import the solution into the production environment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Action	Result
Add the field to the middle of an existing section in the Contact main form.	<p>The field is inserted at the start of the existing section.</p> <p>The field is inserted in the middle of the existing section.</p> <p>The field is appended to the end of the existing section.</p> <p>The field is added in a new section.</p>
Create a new section in the Contact main form and add the field to the new section.	<p>The field is inserted at the start of the existing section.</p> <p>The field is inserted in the middle of the existing section.</p> <p>The field is appended to the end of the existing section.</p> <p>The field is added in a new section.</p>
Create a new form and add the field to the middle of an existing section.	<p>The field is inserted at the start of the existing section.</p> <p>The field is inserted in the middle of the existing section.</p> <p>The field is appended to the end of the existing section.</p> <p>The field is added in a new section.</p>

#### Answer:

Explanation:

Action	Result
Add the field to the middle of an existing section in the Contact main form.	<p>The field is inserted at the start of the existing section.</p> <p><b>The field is inserted in the middle of the existing section.</b></p> <p>The field is appended to the end of the existing section.</p> <p>The field is added in a new section.</p>
Create a new section in the Contact main form and add the field to the new section.	<p>The field is inserted at the start of the existing section.</p> <p>The field is inserted in the middle of the existing section.</p> <p><b>The field is appended to the end of the existing section.</b></p> <p>The field is added in a new section.</p>
Create a new form and add the field to the middle of an existing section.	<p>The field is inserted at the start of the existing section.</p> <p><b>The field is inserted in the middle of the existing section.</b></p> <p><b>The field is appended to the end of the existing section.</b></p> <p>The field is added in a new section.</p>

#### NEW QUESTION # 222

You are creating technical designs for several complex business processes.

You need to implement custom business logic based on the requirements.

Which implementation methods should you use? To answer, drag the appropriate implementation methods to the correct requirements. Each implementation method may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

#### Implementation methods

Business rule

JavaScript code

Power Automate flow

Plug-in

#### Answer Area

#### Requirement

Access current and new values when data is updated.

Run on a schedule.

#### Implementation method

#### Answer:

Explanation:

Implementation methods	Answer Area
Business rule	Requirement
JavaScript code	Access current and new values when data is updated.
Power Automate flow	Run on a schedule.
Plug-in	
	<div style="text-align: right;">  Microsoft         </div>

#### Explanation

##### Box 1: Business rule

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

By combining conditions and actions, you can do any of the following with business rules:

Set column values

Clear column values

Set column requirement levels

Show or hide columns

Enable or disable columns

Validate data and show error messages

Create business recommendations based on business intelligence.

##### Box 2: Power Automate flow

You can create a cloud flow that performs one or more tasks (such as sending a report in email):

Once a day, an hour, or a minute

On a date that you specify

After a number of days, hours, or minutes that you specify

#### NEW QUESTION # 223

A company delivers packages to businesses and consumers. A custom entity named Package captures the package details.

You need to add the following sets of fields to the entity and leverage the built-in operations of the platform:

A set of fields to represent the package length, width, depth, and weight. The maximum value for any dimension is 100 centimeters.

A set of fields for time-sensitive attributes to calculate the efficiency of a delivery based on when the delivery is entered in the system and the existing custom fields: Pickup time and Delivery time.

Which constructs should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Construct
Calculate the efficiency of the delivery.	<div style="border: 1px solid black; padding: 5px; display: inline-block;">         DIFFINMINUTES(Created On, Modified On)          DIFFINMINUTES(Created On, Delivery Time)          DIFFINHOURS(Created On, Modified On)          DIFFINHOURS(Created On, Delivery Time)       </div>
Select the data type for delivery that has additional transformations applied before the data is displayed.	<div style="border: 1px solid black; padding: 5px; display: inline-block;">         Autonumber          Phone number          Customer          Currency          Duration       </div>

**Answer:**

Explanation:

Requirement	Construct					
Calculate the efficiency of the delivery.	<table border="1"><tr><td>DIFFINMINUTES(Created On, Modified On)</td></tr><tr><td>DIFFINMINUTES(Created On, Delivery Time)</td></tr><tr><td>DIFFINHOURS(Created On, Modified On)</td></tr><tr><td>DIFFINHOURS(Created On, Delivery Time)</td></tr></table>	DIFFINMINUTES(Created On, Modified On)	DIFFINMINUTES(Created On, Delivery Time)	DIFFINHOURS(Created On, Modified On)	DIFFINHOURS(Created On, Delivery Time)	
DIFFINMINUTES(Created On, Modified On)						
DIFFINMINUTES(Created On, Delivery Time)						
DIFFINHOURS(Created On, Modified On)						
DIFFINHOURS(Created On, Delivery Time)						
Select the data type for delivery that has additional transformations applied before the data is displayed.	<table border="1"><tr><td>Autonumber</td></tr><tr><td>Phone number</td></tr><tr><td>Customer</td></tr><tr><td>Currency</td></tr><tr><td>Duration</td></tr></table>	Autonumber	Phone number	Customer	Currency	Duration
Autonumber						
Phone number						
Customer						
Currency						
Duration

#### NEW QUESTION # 224

A company has a Common Data Service (CDS) environment. The company creates model-driven apps for different sets of users to allow them to manage and monitor projects.

Finance team users report that the current app does not include all the entities they require and that the existing project form is missing cost information. Cost information must be visible only to finance team users.

You create a security role for finance team users.

You need to create a new app for finance team users.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Edit the Project main form. Select <b>Save As</b> to create a new Finance Form, add the missing cost fields and remove the fields not relevant to Finance.	
In the Maker portal, share the Finance app and select the Finance Security role.	
Create a new model-driven app. Add the project entity, and select the Finance Security role.	
Create a new model-driven app. Add the project entity, and select the Finance form.	
Enable security roles and select the Finance Security role on the Finance form.	
Select the Finance app from the My Apps page and configure the app to use the Finance Security role.	

Answer:

Explanation:

## Answer Area

Edit the Project main form. Select Save as..

Create a new model-driven app. Add the project entity, and select the Finance form.

Enable security roles and select the Finance Security role on the Finance

In the Maker portal, share the Finance app and select the Finance Security role.

1 - Edit the Project main form Select Save as..

2 - Create a new model-driven app. Add the project entity, and select the Finance form

3 - Enable security roles and select the Finance Security role on the Finance

4 - In the Maker portal, share the Finance app and select the Finance Security role.

## NEW QUESTION # 225

You are developing a Power Platform solution. The solution connects to a third-party accounting system by using a Web API through a Power Apps app that automatically exchanges contacts with the sales data.

You have the following code: (Line numbers are included for reference only.)

```
01 GET https://contoso.crm.dynamics.com/api/data/v9.1/accounts?$select=name,accountnumber,telephone1 &$top=5 HTTP/1.1
02
03 Cache-Control: no-cache
04 OData-Version: 4.0
05 Content-Type: application/json
```

You need to ensure that the code only synchronizes data that was not previously synchronized. Which code segment should you insert at line 02?

- A. Prefer: odata.allow-entityreferences
- B. Prefer: odata.include-annotations
- C. Prefer: odata.allow-entityreferences
- D. Prefer: odata.track-changes**

**Answer: D**

## NEW QUESTION # 226
