

1z0-1124-25 zu bestehen mit allseitigen Garantien

Laden Sie die neuesten It-Prüfung 1z0-1124-25 PDF-Versionen von Prüfungsfragen kostenlos von Google Drive herunter:
<https://drive.google.com/open?id=1Fk7POb47QNPAS0kTyjNa3Cc3kcEk-Qxx>

Unser It-Prüfung gibt viele Mühe aus, um den Kandidaten den besten und effizienten Service zu bieten. Heutzutage ist hohe Effizienz ein beliebtes Thema. So hat It-Prüfung die effizienten Schulungsunterlagen für den Kandidaten entworfen, so dass Sie die Kenntnisse über Oracle 1z0-1124-25 Zertifizierung schnell meistern und gute Leistungen in der Prüfung erzielen. Die Schulungsunterlagen zur Oracle 1z0-1124-25 Zertifizierungsprüfung von It-Prüfung können den Kandidaten viel Zeit und Energie ersparen. Und die Kandidaten können deshalb mehr Geld verdienen.

Oracle 1z0-1124-25 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Design and Deploy OCI Virtual Cloud Networks (VCN): This section of the exam measures the skills of a Cloud Network Engineer and covers the design and configuration of Virtual Cloud Networks in Oracle Cloud Infrastructure. It includes understanding VCN and subnet characteristics, implementing both IPv4 and IPv6 addressing, identifying the distinct roles of OCI gateways, and recognizing endpoint types and their application within networking architectures. Knowledge of Object Storage endpoints is also referenced.
Thema 2	• Transitive Routing: This section of the exam measures the skills of a Network Security Engineer and focuses on the interpretation and synthesis of transitive routing configurations. It includes understanding how DRG, Local Peering Gateways (LPG), and network appliances interact in a routed network and implementing those configurations effectively.
Thema 3	• Migrate Workloads to OCI: This section of the exam measures the skills of a Cloud Migration Specialist and focuses on identifying the best networking connectivity strategies when migrating workloads to Oracle Cloud. It includes scenarios involving on-premises infrastructure, other cloud providers, and multicloud environments, ensuring proper connectivity and minimal downtime during transitions.

Thema 4	Plan and Design OCI Networking Solutions and App Services: This section of the exam measures the skills of a Solutions Architect and focuses on planning comprehensive networking and application service strategies. It includes understanding IP management practices, choosing procedural steps for deployments, and evaluating OCI load balancers, DNS configurations, and traffic steering options. Basic familiarity with DNS Security Extensions (DNSsec) is acknowledged as a placeholder for future integration.
Thema 5	Design for Hybrid Networking Architectures: This section of the exam measures the skills of a Network Infrastructure Architect and assesses capabilities in designing hybrid networking environments. It involves demonstrating proficiency with Dynamic Routing Gateway (DRG) configurations, attachments, BGP routing protocols, VPN services, and evaluating FastConnect offerings. This section also emphasizes maintaining reliable multicloud connectivity and implementing IPSec over FastConnect, along with transitive routing practices.
Thema 6	OCI Networking Best Practices: This section of the exam measures the skills of a Cloud Solutions Architect and covers essential best practices for designing secure, efficient, and scalable networking solutions in OCI. It includes architectural design, connectivity setup, security hardening, and monitoring and logging standards that align with industry and Oracle-recommended guidelines.
Thema 7	Troubleshoot OCI Networking and Connectivity Issues: This section of the exam measures the skills of a Cloud Operations Engineer and evaluates the ability to select appropriate OCI tools and services for troubleshooting network and connectivity problems. It also tests knowledge of using OCI logging services to diagnose and resolve configuration or performance issues effectively.

1z0-1124-25 PrüfungGuide, Oracle 1z0-1124-25 Zertifikat - Oracle Cloud Infrastructure 2025 Networking Professional

Wenn Sie IT-Industrie auswählen, wählen Sie nämlich die gutbezahlte Arbeit und bessere Aussichten. Deshalb wollen immer mehr Leute das IT-Zertifikat besitzen. Und heute nehmen immer mehr Leute an Oracle 1z0-1124-25 Zertifizierungsprüfung teil. Und wir It-Prüfung bieten Kadidaten die echten Prüfungsfragen und -antworten mit günstigen Preisen und höher Qualität. Und Wir It-Prüfung bieten Ihnen einjährigen kostenlosen Aktualisierungsservice. Und unsere 1z0-1124-25 Prüfungsunterlagen sind schon bereit. Wir It-Prüfung sind der führende Lieferant der Prüfungsunterlagen. Wir haben die neuesten und die richtigsten Oracle 1z0-1124-25 Zertifizierungsunterlagen, nämlich die Prüfungsfragen und die Testantworten.

Oracle Cloud Infrastructure 2025 Networking Professional 1z0-1124-25 Prüfungsfragen mit Lösungen (Q11-Q16):

11. Frage

When establishing cross-tenancy connectivity using Remote Peering Connections (RPCs), which IAM policy statement is essential to grant the requesting tenancy the ability to initiate the connection?

- A. Allow group <group_name> to use remote-peering-connections in tenancy=<target_tenancy_OCID>
- B. Allow group <group_name> to read remote-peering-connections in tenancy=<target_tenancy_OCID>
- C. Allow group <group_name> to manage virtual-network-family in tenancy=<target_tenancy_OCID>
- D. Allow group <group_name> to inspect virtual-network-family in tenancy=<target_tenancy_OCID>

Antwort: A

Begründung:

* Objective: Grant requesting tenancy permission to initiate an RPC to the target tenancy.

* RPC Process: Requires the requesting tenancy to create and connect the RPC, which needs specific IAM permissions in the target tenancy.

* IAM Verbs:

* manage: Broad permissions, too permissive for RPC initiation.

* use: Allows creation and connection of RPCs, precise for this task.

* inspect: Read-only, insufficient for initiating connections.

- * read:Read-only, insufficient for initiating connections.
- * Evaluate Options:
- * A:Too broad, includes unnecessary permissions; incorrect.
- * B:Precise permission for RPC initiation; correct.
- * C:Read-only, doesn't allow connection; incorrect.
- * D:Read-only, doesn't allow connection; incorrect.
- * Conclusion:"use remote-peering-connections" is the essential policy.

RPCs require specific IAM policies for cross-tenancy connectivity. The Oracle Networking Professional study guide states, "To initiate a Remote Peering Connection, the requesting tenancy needs an IAM policy with the 'use remote-peering-connections' verb targeting the acceptor tenancy's OCID" (OCI Networking Documentation, Section: Remote Peering Connections). This ensures controlled access for connection establishment.

12. Frage

A large financial institution is migrating its on-premises trading platform to OCI. The platform requires low latency and high bandwidth connectivity to the on-premises data center. You have established an Oracle Cloud Infrastructure FastConnect circuit. You now need to connect multiple VCNs in different regions to the on-premises data center via this FastConnect circuit, optimizing for cost and management overhead. Which DRG configuration would be the most efficient and recommended approach?

- **A. Create a single DRG in one region. Attach all VCNs in all regions to this single DRG using DRG attachments with remote peering. Attach the FastConnect circuit to the single DRG.**
- B. Create a single DRG in one region and attach all VCNs in all regions to this single DRG using local peering gateways (LPGs). Attach the FastConnect circuit to this single DRG. Configure static routes on the DRG to direct traffic to the appropriate VCNs.
- C. Create a single DRG in one region and attach all VCNs in all regions to this single DRG using remote peering connections. Attach the FastConnect circuit to this single DRG. Configure static routes on the DRG to direct traffic to the appropriate VCNs.
- D. Create a separate DRG in each region and attach each VCN to its regional DRG. Then, create a separate FastConnect attachment to each regional DRG. Finally, configure static routes on each DRG to direct traffic appropriately.

Antwort: A

Begründung:

- * Requirements:Low latency, high bandwidth, multi-region VCNs via one FastConnect, minimal cost /overhead.
- * DRG Strategy:
- * Multiple DRGs:Increases cost and complexity.
- * Single DRG:Centralizes management, reduces FastConnect attachments.
- * Evaluate Options:
- * A:Multiple DRGs and FastConnects; costly and complex; incorrect.
- * B:Remote peering connections imply RPC, not standard DRG attachments; less precise.
- * C:Single DRG with remote peering attachments; efficient and correct terminology; optimal.
- * D:LPGs are intra-region, not cross-region; incorrect.
- * Conclusion:Single DRG with remote peering attachments is most efficient.

A single DRG optimizes multi-region setups. The Oracle Networking Professional study guide notes, "For connecting multiple VCNs across regions to a single FastConnect, use one DRG with remote peering attachments to minimize cost and management overhead" (OCI Networking Documentation, Section: DRG with FastConnect). Option C aligns with OCI's recommended architecture.

13. Frage

You are designing an OCI VCN for a new application with the following requirements: The application servers in a private subnet must be able to download software updates from public repositories on the internet; the application servers must NOT be directly accessible from the public internet; the application servers must also be able to access Oracle Cloud Infrastructure Registry (OCIR) within the same region to pull container images. Which combination of VCN Gateways BEST meets these requirements?

- A. Dynamic Routing Gateway (DRG) and Internet Gateway
- **B. NAT Gateway and Service Gateway**
- C. NAT Gateway and Internet Gateway
- D. Internet Gateway and Service Gateway

Antwort: B

Begründung:

- * Requirements: Outbound internet access, no inbound exposure, and private OCIR access.
- * Option A: Internet Gateway allows inbound traffic, violating the no-exposure rule-incorrect.
- * Option B: NAT Gateway enables outbound-only internet access, but Internet Gateway adds inbound exposure-incorrect.
- * Option C: NAT Gateway provides outbound internet access without inbound exposure; Service Gateway enables private OCIR access-correct.
- * Option D: DRG is for external networks, not internet/OCIR access; Internet Gateway exposes servers- incorrect.
- * Conclusion: Option C satisfies all requirements.

Oracle states:

- * "Use a NAT Gateway for outbound internet access from private subnets without inbound connectivity.

Use a Service Gateway for private access to OCI services like OCIR."This supports Option C.

Reference:NAT and Service Gateway Overview - Oracle Help Center(docs.oracle.com/en-us/iaas/Content/Network/Tasks/NATgateway.htm & docs.oracle.com/en-us/iaas/Content/Network/Tasks/servicegateway.htm).

14. Frage

Your company is migrating its publicly accessible website to OCI. You want to ensure the highest level of security and prevent DNS spoofing or cache poisoning attacks. You've decided to implement DNSSEC.

Which of the following is the most important first step in enabling DNSSEC for your domain using OCI DNS?

- A. Generate a Key Signing Key (KSK) and a Zone Signing Key (ZSK) using a third-party tool and upload them to OCI DNS.
- **B. Enable DNSSEC on the OCI DNS zone for your domain and obtain the Delegation Signer (DS) record from OCI DNS.**
- C. Configure the OCI DNS resolver to validate all incoming DNS responses using DNSSEC.
- D. Create a Traffic Management Steering Policy with the "DNSSEC" option enabled.

Antwort: B

Begründung:

- * Objective:Enable DNSSEC to secure OCI DNS against spoofing.
- * DNSSEC Process:Requires enabling on the zone, generating keys, and updating the registrar.
- * Evaluate Options:
- * A:Steering policies manage traffic, not DNSSEC; incorrect.
- * B:OCI DNS auto-generates keys; manual upload unnecessary; incorrect.
- * C:Enabling DNSSEC starts the process, provides DS record; correct first step.
- * D:Resolver validation is client-side, not enabling DNSSEC; incorrect.
- * Conclusion:Enabling DNSSEC on the zone is the critical first step.

DNSSEC setup begins at the zone level. The Oracle Networking Professional study guide states, "The first step to enable DNSSEC in OCI DNS is to activate it on the zone, which generates keys and provides a DS record to share with your registrar" (OCI Networking Documentation, Section: DNSSEC Configuration). This establishes the chain of trust.

15. Frage

Your organization is migrating a legacy application to OCI. This application relies on a specific IP address for its external communication, and you need to maintain this IP address during the migration. Which OCI Load Balancer feature or configuration can help you achieve this while ensuring high availability for the application?

- A. Utilizing the Network Load Balancer (NLB) with its inherent ability to preserve client IP addresses.
- B. Deploying multiple Flexible Load Balancers with different public IP addresses and using DNS round- robin.
- **C. Configuring the Flexible Load Balancer with a reserved public IP address.**
- D. Using a private IP address for the load balancer and NAT Gateway for outbound traffic.

Antwort: C

Begründung:

- * Requirement Breakdown: Maintain a specific public IP for external communication with high availability (HA).
- * Option A: Private IP with NAT Gateway is for outbound traffic from private subnets, not inbound public access. It doesn't support a fixed public IP for external clients.
- * Option B: Network Load Balancer (NLB) preserves client IPs (source IP) but doesn't allow reserving a specific public IP. IPs are
