## FCSS\_NST\_SE-7.4 New Braindumps Files | Latest Valid FCSS\_NST\_SE-7.4 Exam Pattern: FCSS - Network Security 7.4 Support Engineer

Considering that our customers are from different countries, there is a time difference between us, but we still provide the most thoughtful online after-sale service twenty four hours a day, seven days a week, so just feel free to contact with us through email anywhere at any time. Our commitment of helping you to Pass FCSS\_NST\_SE-7.4 Exam will never change. Considerate 24/7 service shows our attitudes, we always consider our candidates' benefits and we guarantee that our FCSS\_NST\_SE-7.4 test questions are the most excellent path for you to pass the exam.

## Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q73-Q78):

### NEW QUESTION # 73

Refer to the exhibit.

The exhibit shows the output from using the command `diagnose debug application samld -1` to diagnose a SAML connection.

Based on this output, what can you conclude?

- A. The authentication request is for an SSL VPN connection.
- B. The IdP IP address is 10.1.10.254.
- **C. The IdP IP address is 10.1.10.2.**
- D. Active Directory is used for authentication.

**Answer: C**

### NEW QUESTION # 74

Refer to the exhibit, which shows the output of `diagnose sys session list`.

If the HA ID for the primary device is 0, what happens if the primary fails and the secondary becomes the primary?

- **A. Traffic for this session continues to be permitted on the new primary device after failover, without requiring the client to restart the session with the server.**
- B. The session will be removed from the session table of the secondary device because of the presence of allowed error packets, which will force the client to restart the session with the server.
- C. The session state is preserved but the kernel will need to re-evaluate the session because NAT was applied.
- D. The secondary device has this session synchronized; however, because application control is applied, the session is marked dirty and has to be re-evaluated after failover.

**Answer: A**

Explanation:

Traffic for this session will continue uninterrupted on the new primary after failover, because the session was already synced to the secondary (`ha_id=0` with a "synced" state), so the client doesn't need to re-establish the connection.

### NEW QUESTION # 75

Refer to the exhibit, which shows the sniffer log on two FortiGate devices.

The IPsec tunnel is up on both ends of the tunnel, but traffic is not flowing.

Based on the information in the log, which scenario explains the output on FortiGate FGT-02?

- A. The encryption method is not supported on FGT-02.
- **B. Hardware offload is disabled on FGT-02.**
- C. The IKE daemon crashed.
- D. A third-party device is blocking protocol 50.

**Answer: B**

Explanation:

No ESP packets show up on FGT 02's CPU because the tunnel traffic is being offloaded to its NP hardware, bypassing the kernel sniffer. In other words, hardware offload is active for IPsec on FGT 02, so you won't see ESP in a CPU based packet capture on that device.

### NEW QUESTION # 76

Exhibit 1.

Exhibit 2.

Refer to the exhibits, which show the configuration on FortiGate and partial internet session information from a user on the internal network.

An administrator would like to test session failover between the two service provider connections.

Which two changes must the administrator make to force this existing session to immediately start using the other interface? (Choose two.)

- **A. Configure `setsnat-route-change enable`.**

- B. Change the priority of the port2 static route to 5.
- C. Configure unsetsnat-route-change to return it to the default setting.
- D. Change the priority of the port! static route to 11.

Answer: A,D

#### NEW QUESTION # 77

Refer to the exhibit.

Assuming a default configuration, which three statements are true? (Choose three.)

- A. Strict RPF is enabled by default.
- B. User B: Pass. FortiGate will use asymmetric routing using wan1 to reply to traffic for 95.56.234.24.
- C. User C: Fail. There is no route to 10.0.4.63 using port1 in the routing table.
- D. User A: Pass. The default static route through wan1 passes the RPF check regardless of the source IP address.
- E. User B: Fail. There is no route to 95.56.234.24 using wan2 in the routing table.

Answer: B,C,E

#### NEW QUESTION # 78

.....

You have to put in some extra effort, time, and investment and prepare well to pass this milestone. Do you have a plan to get success in the Fortinet FCSS\_NST\_SE-7.4 certification exam? Are you looking for the right study material that ensures your success in the Actual4test new real Fortinet FCSS\_NST\_SE-7.4 Exam Questions on your first attempt? If your answer is yes then you just need to get help from Actual4test practice exam questions.
