Three User-Friendly Formats With Real Fortinet FCP_FCT_AD-7.4 Questions

Are you looking to pass FCP - FortiClient EMS 7.4 Administrator with high marks? You can check out our detailed FCP_FCT_AD-7.4 PDF questions dumps to secure desired marks in the exam. We constantly update our FCP - FortiClient EMS 7.4 Administrator test products with the inclusion of new FCP_FCT_AD-7.4 brain dump questions based on expert's research. If you spend a lot of time on the computer, then you can go through our FCP_FCT_AD-7.4 dumps PDF for the FCP_FCT_AD-7.4 to prepare in less time.

Fortinet FCP - FortiClient EMS 7.4 Administrator Sample Questions (Q39-

Q44):

NEW QUESTION # 39

Refer to the exhibit.

Compliance Profile

Zero Trust Tagging Rule Set

Fortinet

Name: Sales Department Compliance

Tag Endpoint As: Sales Department Compliance

Enabled: ☒

Comments: Optional

Type	Value
Windows (2)	
Vulnerable Devices Severity Level	Medium or higher
Running Process	Calculator.exe

Save Cancel

Based on the settings shown in the exhibit, which two actions must the administrator take to make the endpoint compliant? (Choose two.)

- A. Patch applications that have vulnerability rated as high or above.
- B. Enable the web filter profile.
- C. Integrate FortiSandbox for infected file analysis
- D. Run Calculator application on the endpoint.

Answer: A,D

Explanation:

* Observation of Compliance Profile:

* The compliance profile shown in the exhibit includes rules for vulnerability severity level and running process (Calculator.exe).

* Evaluating Actions for Compliance:

* To make the endpoint compliant, the administrator needs to ensure that the vulnerability severity level is medium or higher is patched (D).

* Additionally, the Calculator.exe application must be running on the endpoint (B).

* Eliminating Incorrect Options:

* Enabling the web filter profile (A) is not related to the compliance rules shown.

* Integrating FortiSandbox (C) is not a requirement in the given compliance profile.

* Conclusion:

* The correct actions are to run the Calculator application on the endpoint (B) and patch applications with vulnerabilities rated as high or above (D).

NEW QUESTION # 40

Refer to the exhibit.

Endpoints > All Endpoints

Fortinet

Endpoints Scan Patch Action			
JUMBOX	Administrator	10.150.0.41	Policy Default EMS
Other Endpoints			
Summary Antivirus Events Web Filter Events Video Filter Events Vulnerability Events PUA Events System Events Brave-Dumps.com			
Date	Count	Message	
2025-02-12 00:40:51	1	Malware: EICAR_TEST_FILE found in C:\Users\administrator\Desktop\Resources\testfile	

You provide a webserver hosting service. An endpoint downloads a test file, testfile.txt, that gets blocked by FortiClient. Which configuration can you use to make the file accessible on the endpoint? (Choose one answer)

- A. Restore access to file directly using FortiClient.
- B. Allow the webserver URL in the exclusion list in the web filter profile.
- C. Exclude testfile.txt from the malware protection profile.
- **D. Add the file to the allowlist in quarantine management on FortiClient EMS.**

Answer: D

Explanation:

According to the FortiClient EMS 7.2/7.4 Administration Guide (specifically the Quarantine Management and Malware Protection sections), the correct administrative workflow to restore a blocked file and ensure it is no longer flagged as malicious is to use the Quarantine Management feature on the EMS server.

1. Analysis of the Exhibit

* Event Type: The exhibit shows an Antivirus Event where a file named testfile.txt was flagged as Malware: EICAR_TEST_FILE.

* Location: The file was found in a local user directory (C:\Users\administrator\Desktop\Resources\testfile.txt).

* System State: The endpoint is managed by EMS (indicated by the Policy: Default and EMS status icons).

2. Why Option D is the Correct Choice:

* Centralized Control: In a managed environment, the administrator uses the EMS console to oversee security incidents. To restore a file that has been quarantined, the administrator must navigate to Quarantine Management > Files.

* Allowlist & Restore Action: By selecting the specific blocked file (testfile.txt) and clicking Allowlist & Restore, two things happen simultaneously:

* Restoration: EMS sends a command to the FortiClient endpoint to release the file from the local quarantine folder and return it to its original path.

* Allowlisting: The file's hash is added to the Allowlist (managed under Quarantine Management > Allowlist), which prevents FortiClient from re-quarantining the file during future real-time or on-demand scans.

* Accessibility: This is the documented method to make a file "accessible on the endpoint" while ensuring it is not immediately re-blocked by the security engine.

3. Why Other Options are Incorrect:

* A. Restore access directly using FortiClient: While FortiClient has a local quarantine tab, the "Release" button is typically greyed out or restricted when the client is managed by EMS to ensure centralized security policy enforcement.

* B. Allow the webserver URL in the exclusion list: The exhibit shows an Antivirus/Malware event, not a Web Filter event. The file has already been downloaded to the local disk and is being blocked by the Real-Time Protection engine, so a Web Filter URL exclusion would have no effect on the local file block.

* C. Exclude testfile.txt from the malware protection profile: While adding a path exclusion to the Malware Protection profile is a valid way to prevent future scans of a directory, it does not automatically restore a file that has already been moved to quarantine. The proper workflow for an existing block is to use the Quarantine Management tool first.

NEW QUESTION # 41

Which two VPN types can a FortiClient endpoint user initiate from the Windows command prompt? (Choose two)

- **A. SSL VPN**
- **B. IPsec**
- C. PPTP
- D. L2TP

Answer: A,B

Explanation:

FortiClient supports initiating the following VPN types from the Windows command prompt:

* IPsec VPN: FortiClient can establish IPsec VPN connections using command line instructions.

* SSL VPN: FortiClient also supports initiating SSL VPN connections from the Windows command prompt.

These two VPN types can be configured and initiated using specific command line parameters provided by FortiClient.

NEW QUESTION # 42

Which three types of antivirus scans are available on FortiClient? (Choose three)

- A. Custom scan
- B. Proxy scan
- C. Full scan
- D. Quick scan
- E. Flow scan

Answer: A,C,D

Explanation:

FortiClient offers several types of antivirus scans to ensure comprehensive protection:

- * Full scan: Scans the entire system for malware, including all files and directories.
 - * Custom scan: Allows the user to specify particular files, directories, or drives to be scanned.
 - * Quick scan: Scans the most commonly infected areas of the system, providing a faster scanning option.
- These three types of scans provide flexibility and thoroughness in detecting and managing malware threats.

NEW QUESTION # 43

An administrator installs FortiClient EMS in the enterprise.

Which component is responsible for enforcing protection and checking security posture?

- A. FortiClient vulnerability scan
- B. FortiClient EMS
- C. FortiClient EMS tags
- D. FortiClient

Answer: D

Explanation:

* Understanding FortiClient EMS Components:

* FortiClient EMS manages and configures endpoint security settings, while FortiClient installed on the endpoint enforces protection and checks security posture.

* Evaluating Responsibilities:

* FortiClient performs the actual enforcement of security policies and checks the security posture of the endpoint.

* Conclusion:

* The component responsible for enforcing protection and checking security posture is FortiClient (C).
